1 Background

After entry into force of the Nagoya Protocol and the corresponding Regulation (EU) No. 511/2014, European users of genetic resources are required to "exercise due diligence" to ensure that they have acquired genetic resources or associated traditional knowledge in accordance with the national access procedures of the respective provider country. In Germany, as in other EU member states, "competent national authorities" (CNAs) for ABS are in the course of formation and first meetings of European CNAs already took place.¹ One of the discussed implementation challenges was the availability of transparent and reliable national access regulations in provider countries. CNAs, as the German Nagoya CNA-Unit of the Federal Agency for Nature Conservation (Bundesamt für Naturschutz, BfN), are repeatedly being asked for information and advice in this regard. But the international ABS Clearing House (ABS-CH), designed as the key tool for information exchange aiming at enhancing legal certainty, clarity, and transparency on procedures for access to genetic resources, is not yet sufficiently populated and thus does not allow users to gather the relevant information for the vast majority of countries.

To counter such legal uncertainties, the Nagoya CNA-Unit of the BfN organized an international exchange of information and experience, the "Vilm ABS Dialogue – Informing about Domestic Measures for Access to Genetic Resources" in August 2017 at the BfN-branch office on Vilm Island. The conference gave an opportunity to identify and present best-practices on available, clear and transparent access regulations with representatives of CNAs/National Focal Points (NFPs) of provider countries. In this sense, the objective of the meeting was not to promote facilitated access, but rather to secure transparency, in order to allow users of genetic resources to be better informed by European CNA's towards countries that have structured, clear, and transparent access measures in place.

To identify countries that already have clear and structured transparent access procedures in place, BfN commissioned an overview study to guide the selection and invitation of approximately 10 countries for the first ABS dialogue.

First, an access profile template for summarizing the most relevant information on the respective ABS systems per country was developed. The ABS-CH (<https://absch.cbd.int/>) was then used to scan all parties of the Convention on Biological Diversity (CBD) to identify countries that already have published ABS measures.

The first scan of the ABS-CH revealed that currently (as of July 2017) 47 countries have posted legislative measures on the ABS-CH, out of which 32 are countries from the European Union (EU) or other countries being typically regarded as user countries, and thus not of particular interest for the dialogue. It has to be stated that many of the posted legislative measures do neither define an overall ABS system nor specific access procedures, but are legislative measures for e.g. the ratification of or the accession to the Nagoya Protocol. The first scan of the ABS-CH thus revealed 15 countries as potential candidates for the first dialogue. It turned out that these 15 countries have a total of 64 legislative ABS measures posted on the ABS-CH. Nevertheless the investigation revealed that out of these 64 measures, more than half (35) do not contain any information on the access procedures of the respective

¹ A first meeting of European CNAs was held in March 2017 on behalf of the German Federal Agency for Nature Conservation (Bundesamt für Naturschutz, BfN) at its branch office on Vilm-Island, followed by a second meeting in September 2017 in Brussels.

countries. Five countries do have at least one Internationally Recognized Certificate of Compliance (IRCC) posted on the ABS-CH, which is a clear indication that the ABS system is operational. Further research carried out (Google, ECOLEX and network of ABS experts) showed additional eight countries that are rather advanced concerning their access measures, but that do not have their measures posted on the ABS-CH yet. The combined research thus led to a list of 23 countries whose access profiles were first filled out by the researchers and then sent to the NFPs of the individual countries for revision and correction if necessary.

Based on the results of the above-mentioned study, the following ten countries, mostly ABS NFPs and representatives of the CNAs, accepted to present their respective access procedures during the ABS dialogue on the isle of Vilm (in alphabetical order): Australia, Brazil, Costa Rica, Ethiopia, India, Kenya, Peru, Philippines, South Africa and Viet Nam. Completed by representatives of Mexico as the current presidency of the CBD Conference of the Parties (COP), of EU member states CNAs, the European Commission, the Secretariat of the Convention on Biological Diversity (SCBD) and of the ABS Capacity Development Initiative, the ABS Dialogue brought together around 40 participants from 19 countries in America, Australia, Asia and Europe. For further details, a list of participants is attached in the annex.

It can be concluded from the meeting and its underlying scoping study that almost three years after the entry into force of the Nagoya Protocol, the number of countries with functioning, clear and transparent access measures in place is still very limited. The ABS Dialogue 2017 thus came at the right time as it allowed advanced countries of ABS implementation to discuss their experiences with setting up and running an ABS system. Other provider countries which are currently developing access processes will benefit from these results. Furthermore, one essential goal of the conference was the joint creation of the so-called access profiles which will be published in the following sections. These will now serve the users as transparent instructions for legally compliant access to the resources in the respective countries.

Finally, it should be noted the ABS Dialogue 2017 can only be a first step towards ABS transparency and legal certainty. Consequently, it is planned to organize a second Vilm Dialogue of the same kind in 2018 (September 10-14) which will give 10 more countries the opportunity to present their current access conditions to their genetic resources.

This report is based on various notes taken during the workshop. It does not purport to reproduce at full length all debates and interventions. The summarized discussion-points are based on notes taken during the meeting and do not necessarily reflect the official position of the respective countries.

2 Opening Remarks: The Journey Implementing the Nagoya Protocol

Opening remarks at the ABS Dialogue were held by the German Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety (BMUB), the Secretariat of the Convention on Biological Diversity (SCBD) and the European Commission (EC).

They were preceded by a warm welcome on the first evening through representatives of the initiating institution of the conference, Mr. Thomas Greiber, Head of the German Competent National Authority for the Nagoya Protocol – which forms a part of the BfN – and his colleague Mrs. Ute Feit. The latter informed in her presentation about the objectives of the ABS Dialogue and underlined that beside the very helpful joint creation of the access profiles the

dialogue will above all further a deeper and better communication and cooperation between CNAs of provider and user countries. Mrs. Feit introduced and thanked Mr. Suhel Al Janabi, Executive Director of GeoMedia GmbH and his team for their organizational support during the event.

On behalf of the Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety, Dr. Stefan Lütkes, Head of Division Law of Nature and Landscape Conservation welcomed participants to the ABS Dialogue 2017. In his opening speech, Dr. Lütkes referred to the history of origins of the Nagoya Protocol, highlighting that Germany has been a critical and constructive partner for the implementation of the Protocol from the beginning. He further informed participants that the objective of this dialogue is to discuss practical implications of the Nagoya Protocol implementation and that mutual trust lies at the core of successful ABS implementation.

Valerie Normand, Senior Programme Officer for ABS at the SCBD provided participants with an overview of the status of Nagoya Protocol implementation, the UN Biodiversity Conference and key issues for 2017-2018 as well as SCBD capacity-building activities supporting implementation of the Nagoya Protocol.

Alicja Kozłowska, Policy Officer for ABS under the Nagoya Protocol at the European Commission thanked the German authorities for organising this meeting and reported on the developments at the level of the European Union, focusing on EU Regulation No. 511/2014 and the users' due diligence obligation.

3 Agenda, Objective and Work Flow of the Workshop

Mr. Suhel al-Janabi, gave participants a brief overview of the agenda (see annex VI - XXI). He highlighted that the objective of the dialogue is to gather a better knowledge base on existing regulations and access procedures while fostering transparency for both, countries using and providing genetic resources. This will especially allow European CNAs to inform and guide users of genetic resources towards countries that have clear and structured access measures in place.

After the presentation of the agenda, a block of 90 minutes was foreseen for each of the 10 countries to present and discuss their respective access procedures. The first 30 minutes were used for the presentation of the access procedures, including questions and answers. A second block of 30 minutes was used to introduce a fictional ABS case scenario and to project this scenario onto the respective ABS system (see annex XXII - XXXV). In the third and last block of 30 minutes, an access profile was filled in for each country, summarizing the key features of the respective ABS systems. On the third day and after all countries had discussed their access procedures, Mexico, in its special role as COP presidency, gave an overview of the current status of the ABS system in Mexico. An overall discussion then allowed identifying key access questions and options for addressing them and underlined the importance of flow charts as a graphic tool to illustrate different access procedures in an easy to understand manner. At last, the way forward was outlined and discussed with respect to this publication, options for further CNA cooperation, the second Vilm Dialogue and the activities foreseen by the SCBD.

4 Country Session

Country presentations aimed to give relevant ABS actors the opportunity to present their national access procedures.

Following the country presentations, presenters were given time to clarify questions of understanding. The questions posed by participants focused in particular on:

- The legal framework for ABS implementation
- The institutional set-up with regards to ABS-compliant access to genetic resources / associated traditional knowledge
- What is required to access genetic resources / associated traditional knowledge in the respective countries (e.g. Prior Informed Consent - PIC and Mutually Agreed Terms - MAT, collaboration with national research institutions, permits, etc.)
- Differences between access for commercial and non-commercial purposes
- Step-by-step procedures and timelines for access to genetic resources / associated traditional knowledge

5 Access Procedures of Viet Nam

5.1 Country Presentation

Regulatory framework on Access to GRs and Benefit sharing from utilization of GRs in Vietnam

Vietnam has become a member to the Convention on Biological Diversity in 1994 and ratified the Nagoya Protocol in 2014. The first national regulations on Access to GRs and Benefit sharing from utilization of GRs (ABS) were conceptualized in the Law on Biodiversity (2008).

The new Decree no. 59/2017/ND-CP on management of access to and benefit sharing from utilization of Genetic Resources (GRs) has institutionalized provisions and obligations of the Nagoya Protocol into Vietnam context as a member nation. It also details regulations on ABS in the Biodiversity Law (2008) to keep up with the currently ongoing demands for GRs usage activities all over the world. Major contents of the Decree include:

- ABS activities principles (Article 4)
- Designation of the Ministry of Environmental and Natural Resources (MONRE) as National Focal Point to the Nagoya Protocol (Article 5)
- Identification of two national competent authorities including MONRE and Ministry of Agriculture and Rural Development (MARD) (Article 6), in which, MARD grants, renews or withdraws licenses to access genetic resources of agricultural crop varieties, livestock, aquatic species, and forest seedlings. MONRE is also responsible for the other genetic resources, including wild specimens.
- Identification of 3 groups of entities which must obtain the License to access to GRs (Article 7.1), including (1) Vietnamese organizations and individuals access GR for commercial purposes or for the development of commercial products; (2) Foreign individuals and organizations access genetic resources for any purpose; and (3) Domestic individuals and organizations wishing to take genetic resources out of

Vietnamese territory, unless Vietnamese students, doctoral students, or science and technology organizations who wish to transfer genetic resources out of the Vietnamese territory for study purposes or research for non-commercial purposes. Procedures to obtain the License (Article 8-14)

- Provisions on the contract (MAT) and License (PIC) (Article 15-18) and the Contract template (Form 3)
- Provisions on benefit-sharing (Article 21-23)

The main challenge during development of these regulations was how to make them implementable while simultaneously setting up a system that works for both regulators and users, and bring back benefits for providers. Secondly, traditional knowledge associated with GRs remains an issue not yet to be solved, further guidance needs be developed.

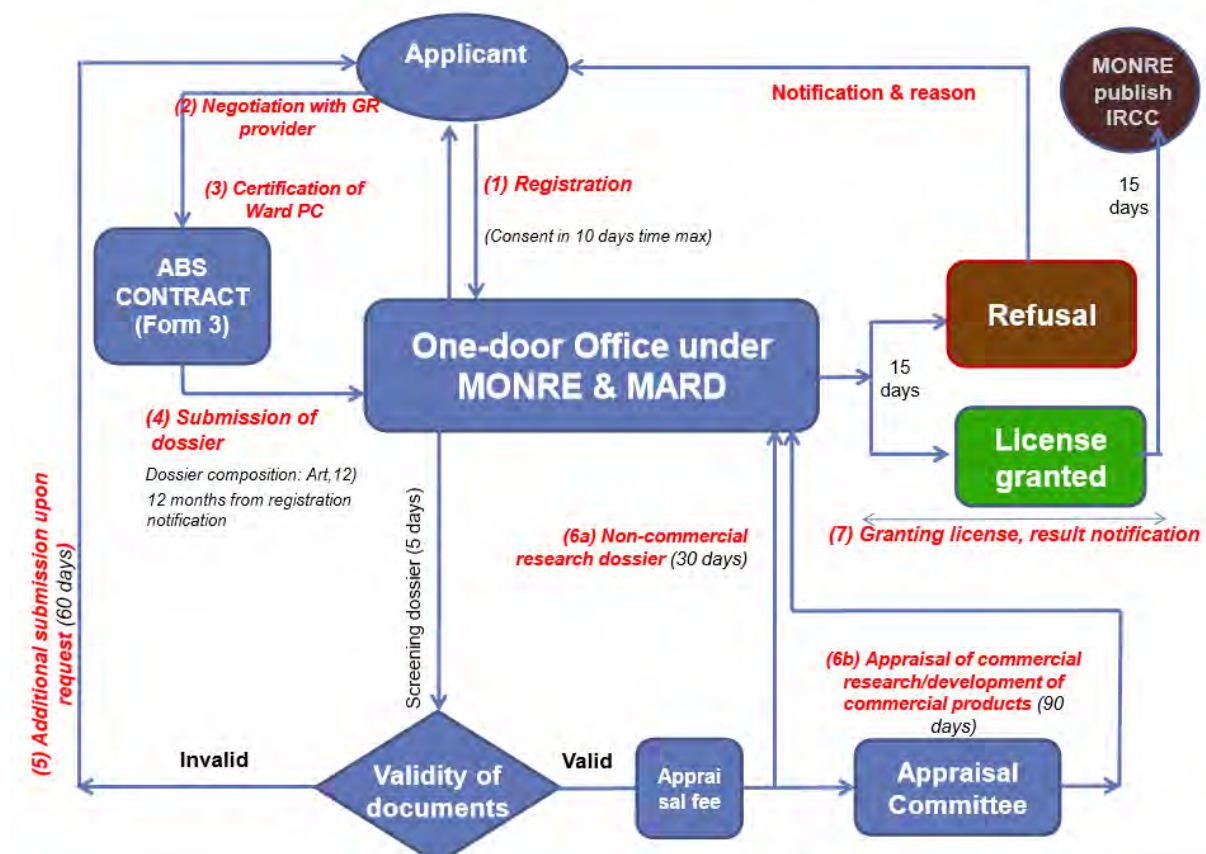

Fig. 2: Diagram for granting license to access GRs

5.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

How are users reacting to the situation now that ABS is being regulated in Viet Nam? Now that access to genetic resources is regulated in Viet Nam, foreign users seek information from Vietnamese national competent authorities on how to comply with ABS.

- Does Viet Nam have a single-window approach? In order to access genetic resources in Viet Nam, the user needs to register with the relevant national authority. There are

two CNAs in Viet Nam: 1) the Ministry of Agriculture and Rural Development (MARD), contact point of which is Department of Science, Technology and Environment and 2) the Ministry of Natural Resources and Environment (MONRE), the contact point of which is Biodiversity Conservation Agency. The former (MARD) is responsible for access of genetic resources of agricultural crop, livestock breeds, aquatic species and forest seedlings. The latter (MONRE) is responsible for access to all other genetic resources.

- Access requirements in Viet Nam distinguish between 1) individuals vs. organizations; 2) nationals vs. foreigners; 3) non-commercial vs. commercial purposes. For example, foreigners must provide a cooperation agreement with an organization in Viet Nam. National students and research institutions have a simplified procedure to obtain allowance to transfer genetic resources abroad. Further, there is a difference in the processing duration for non-commercial (30 days) and commercial purposes (90 days).
- The appraisal time (30 days for non-commercial research purposes / 90 days for commercial research or commercial product development purposes) is specified. Does Viet Nam have any appraisal fees? At the moment, no appraisal fees are applied. Further guidance on appraisal fees will be developed in the future.
- ABS contracts in Viet Nam are signed with the provider, but benefits are given to the government. Does the provider receive any benefits? Yes, if the provider is an institution for example it will receive 30% and the government receives 70% of monetary benefits. If the provider is a landowner, 50 % of the monetary benefits are given to the landowner, 50 % to the government. For traditional knowledge it may be different. In the recent Decree 59 dated 12 May 2017 traditional knowledge is not yet included. An under-Decree is being developed.
- The government seems to play a key role when it comes to monetary benefit-sharing. How is benefit-sharing defined? Benefit-sharing is very difficult to define. There is no benefit-sharing fund in Viet Nam. Monetary benefits are channeled to the State budget to prioritize biodiversity conservation activities.

6 Access Procedures of Ethiopia

Dr. Melesse Maryo, Director General of Ethiopian Biodiversity Institute (EBI);

Mr. Ashenafi Ayenew Hailu, Director, Genetic Resource Access and Benefit Sharing Directorate, Ethiopian Biodiversity Institute (EBI), ABS National Focal Point

Fig. 3: Dr. Melesse Maryo and Mr. Ashenafi Ayenew Hailu

6.1 Country Presentation

Ethiopia has ratified the Convention on Biological Diversity (CBD) and the Nagoya Protocol in 1994 and 2012 respectively. Ethiopia has also ratified the International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA) in 2003. Ethiopia has put in place both institutional and legal frameworks to implement the third objective of the CBD, i.e. to facilitate access and ensure fair and equitable benefit sharing. The Ethiopian ABS system also provides legal space for the implementation of the ITPGRFA special approach to ABS to PGRFA (MLS/SMTA).

The Ethiopian Biodiversity Institute (EBI) is a Competent National Authority (CNA), i.e. responsible for granting access. It is also the Focal Institute to the CBD and ITPGRFA and this helps for mutual supportive implementation of the bilateral ABS system established by CBD/NP and the multilateral ABS system established by ITPGRFA. To effectively implement ABS issues, EBI has established the Genetic Resource Access and Benefit Sharing Directorate as core process since 2010. The Directorate is mandated (authorized) to regulate genetic resources transfer (access to GRs/TK) and to ensure that the country and its communities get fair and equitable share of benefits arising from the utilization of their GRs/TK. The Directorate is also the focal point to the Nagoya Protocol / ABS.

Ethiopia has issued Access to Genetic Resources and Community Knowledge and Community Rights (ABS Law), Proclamation (No.482/2006) and Regulation (No.169/2009). The legislations focus on PIC, MAT, Multilateral System of Access and how to implement relevant activities. According to the Ethiopian ABS law, access means the collection, acquisition, transfer or use of genetic resources and/ or community knowledge. The law applies on access to genetic resources found in in-situ or ex-situ conditions and community knowledge. No person shall access GRs or community knowledge (CK) unless in possession of a written access permit granted by EBI based on PIC. No person shall export GRs out of Ethiopia

unless in possession of a permit granted by EBI.

Access to GRs shall be subject to the PIC of EBI and access to CK shall be subject to the PIC of the concerned local community. An access applicant who is a foreigner should present a letter from the competent authority of his national state or that of his domicile assuring that they will uphold and enforce the access obligations of the applicant.

Ethiopia has designated a publishing authority and published the ABS proclamation and regulation on the CBD-ABS-Clearing House (ABSCH) and information on ABS, MTA and assurance letter formats are available on the EBI website (www.ebi.gov.et).

6.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- An issue that sparked debate among participants concerns a basic pre-condition of access in Ethiopia: According to the Ethiopian ABS law (see Article 12.4 of Proclamation No. 482 / 2006) a foreign applicant shall present a supportive letter from the competent authority of his / her national state assuring that they will uphold and enforce the access obligations of the applicant. Participants argued that it is not possible for Competent National Authorities in Europe or elsewhere to assume this role for several reasons (principle of sovereignty, human resources, etc.). Participants further enquired whether it is easy for Ethiopia to obtain such letters. What about countries such as the U.S. that do not have CNAs? According to the Ethiopian ABS National Focal Point, the supportive letter does not need to be issued by a CNA but may be issued by any responsible entity in the relevant Ministry of the applicant state.
- Closely linked with this question of presenting a letter from the CNA, the following question was posed: If a foreign institution wants to undertake research with a partner in Ethiopia, does a partnership with a local counterpart suffice or is the user required to present two letters (one from the institution and one from the CNA) to the Ethiopian authorities? According to the Ethiopian ABS system, the user is required to present two letters.
- How long does it take to obtain an export permit? A permit can be completed within 24 hours (in situ) or 3-5 days (ex situ).
- An Ethiopian ABS case (ABS agreement on *Osyris spec.*.. signed between the Ethiopian Biodiversity Institute and Docomo Oils PLC.) was presented. The US based company Docomo Oils PLC is establishing an industry in Ethiopia for processing herbal compounds, extraction of essential oils and the manufacturing of other related herbal and cosmetics products. The user may harvest, collect and process essential oils of the shrub from the area stated in the agreement. Participants enquired why the duration of the agreement is limited to 10 years and what this means in terms of the future of the industry? In response it was argued that there should be an environmental assessment / evaluation after 10 years. A contract may be renewed if the company uses the resource sustainably. Since this is not certain, it is fixed as a condition to ensure sustainability.

Mr. Thangapandian Rabikumar, Secretary, National Biodiversity Authority

Fig. 14: Dr. Atul Kumar Gupta and Mr. Thangapandian Rabikumar

7.1 Country Presentation

Introduction

India is one of the recognized mega diverse countries occupying 2.4% of the global geographical area and harboring 7 to 8 % of globally recorded species. Four of the 34 identified hotspots in the world are found in India. India is also rich in traditional knowledge associated with the biological resources. This traditional knowledge occurs in ancient texts as well as in oral undocumented traditions.

India is a party to the Convention on Biological Diversity (CBD) and also to Nagoya Protocol on Access and Benefit Sharing. Ministry of Environment, Forest and Climate Change (MoEFCC) is the nodal ministry which acts as the focal point for CBD and Nagoya Protocol. MoEFCC is also publishing authority for Access and Benefit Sharing Clearing House (ABSCH). The National Biodiversity Authority (NBA) is designated as the competent National Authority for Nagoya Protocol on ABS which is also the national authorized user for ABSCH.

Biological Diversity Act, 2002

Government of India enacted the Biological Diversity Act (BD Act) in 2002 and notified the Biological Diversity Rules in 2004 to give effect to the provisions of the CBD. The objectives of the BD Act are:

1. Conservation of Biological Diversity
2. Sustainable use of its components and
3. Fair and equitable sharing of benefits arising out of the biological resources and knowledge associated thereto.

India also notified the Guidelines on access to biological diversity resources and associated knowledge and benefit sharing regulations in 2014 (ABS Regulations, 2014).

The BD Act is aimed at protecting the sovereign rights of India over its biological resources and to prevent the misuse and misappropriation of biological resources occurring in or obtained from India. The BD Act also protects biological diversity and associated traditional knowledge by documenting them in the form of Peoples' Biodiversity Register (PBR). The BD Act regulates the access and use of biological resources and/ or associated knowledge for certain activities. The BD Act also ensures sustainable utilization of biological resources and equitable benefit sharing from the use of the same. It also provides legal recognition and supports the biodiversity and associated TK in the country.

Institutional mechanism under BD Act

The BD Act is implemented through a three-tier institutional mechanism, at national level, NBA was established in October 2003 in Chennai under section 8 of the BD Act; At the provincial level, State Biodiversity Boards (SBB) are established by the representative provincial governments; and at the Community /local body level, Biodiversity Management Committees (BMC) are established for the purpose of promoting conservation, sustainable use and documentation of biological diversity including preservation of habitats, conservation of land races, folk varieties and cultivars, domesticated stocks and breeds of animals, microorganisms and chronicling of knowledge relating to biological diversity.

Composition of National Biodiversity Authority

The composition of NBA includes a Chairperson, 10 ex-officio members representing various ministries of the union government and five nominated expert members. The functions of NBA include issuing of guidelines on ABS, grant approval for access, advice the central and state government on biodiversity related matters and to oppose grant of Intellectual Property Rights (IPR) outside India on any biological resources obtained from India illegally.

Activities regulated under BD Act

The scope of the BD Act includes regulates the activity relating to access to biological resources and/ or associated knowledge. When any person desires to access the biological resources and/or associated knowledge for the purpose of research, bio-survey, bio- utilization, commercial utilization, obtaining IPR based on biological resources obtained from India, transfer the results of research and transfer already accessed biological resources and associated knowledge to third party, needs prior approval under the provisions of the BD Act. The details are as below:

Tab. 3: Application forms for different activities

Form	Category and timeline	Who should apply?
Form I	Access to Biological resources occurring in India and associated traditional Knowledge <i>(Application may be disposed within a period of 6 months as per the BD Rules)</i>	Non-Indian ² , NRI, Non-Indian entity or Indian entity having non-Indian participation in its share capital or management
Form II	Transferring the results of research <i>(Application may be disposed within a period of 3 months as per the BD Rules)</i>	Any Indian / non-Indian or Indian ³ / non-Indian entity to any non-Indian, NRI, non-Indian entity or Indian entity having non-Indian participation in share capital or management
Form III	Applying for Intellectual Property Rights for inventions based on any research or information on a biological resource obtained from India <i>(Application may be disposed within a period of 3 months as per the BD Rules)</i>	Any Indian/ non Indian or entity
Form IV	Third Party transfer of the accessed biological resources and associated traditional knowledge. <i>(Application may be disposed within a period of 6 months as per the BD Rules)</i>	Any person who obtained approval of NBA in Form I, to Indians / non-Indians or entities
Form-B	Conducting of non-commercial research or research for emergency purposes outside India by Indian researcher's / Government institutions <i>(Application may be disposed within a period of 45 days as per ABS Regulations, 2014)</i>	Indian Researchers/ Government Institutions

NBA has introduced an online portal viz e-filing of ABS application to file the application with NBA seeking approval for accessing biological resources and/or associated knowledge under BD Act. This is aimed at providing a user-friendly platform for the potential users of biological resources from India. The online portal may be accessed through this link: <http://absefiling.nic.in>

Processing of ABS Application

The access applications received at NBA, after a preliminary scrutiny of the application, the same would be referred to SBBs for obtaining consent or otherwise of the BMC or the local bodies concerned. Thereafter, the application is placed before a committee of experts along with inputs of the local bodies for examination and recommendation of the EC is placed before the Authority (Governing Body) for consideration. On the approval of the Authority, a draft agreement containing mutually agreed terms (MAT) is sent to the user for execution/ signature. Every approval given under BD Act is in the form of an agreement signed between the user and a representative of NBA. After signing the agreement, it is uploaded in the

2 Natural/ legal who falls under section 3(2) of the BD Act will be treated as Non-Indian i.e (a) a person who is not a citizen of India; (b) a citizen of India, who is a non-resident as defined in clause (30) of section 2 of the Income-tax Act, 196 1; (c) a body corporate, association or organization- (i) not incorporated or registered in India; or (ii) incorporated or registered in India under any law for the time being in force which has any non-Indian participation in its share capital or management.

3 Natural/ legal who falls under section 7 of the BD Act will be treated as Indian

ABSCH to generate IRCC.

ABS Regulations, 2014

The ABS regulations 2014 provides legal certainty, clarity and transparency. The objective of the regulations is to provide guidance to the users on procedure to access to biological resources and/ or associated knowledge for various activities. It also provides a simplified procedure to Indian researchers and government institute for conducting of non-commercial research or research for emergency purposes outside India by Indian researcher's / Government institutions. It provides different options for benefit sharing with a graded percentage terms. It also provides the apportioning of the accrued benefits to the community/BMC.

The BD Act exempts prior approval for local people and communities to access bio resources for the use in India. The growers and cultivators, vaid and hakims (Practitioners of traditional medicine system) are also exempt under the BD Act to use biological resources for bona-fide purposes. Collaborative research projects involving transfer or exchange of biological resources or information relating thereto through the government sponsored institutions which are in conformity with the guidelines (2006) issued by the Ministry of Environment, Forest and Climate Change are also exempted.

India is also party to the ITPGRFA, it is obliged to provide exemption in order to respect those treaties. Thus, MOEFCC issued notification under section 40 of the BD Act for exempting such crops listed under Annex-I of the ITPGRFA, as notified by the Ministry of Agriculture, Government of India from the purview of the sections 3 and 4 of the BD Act.

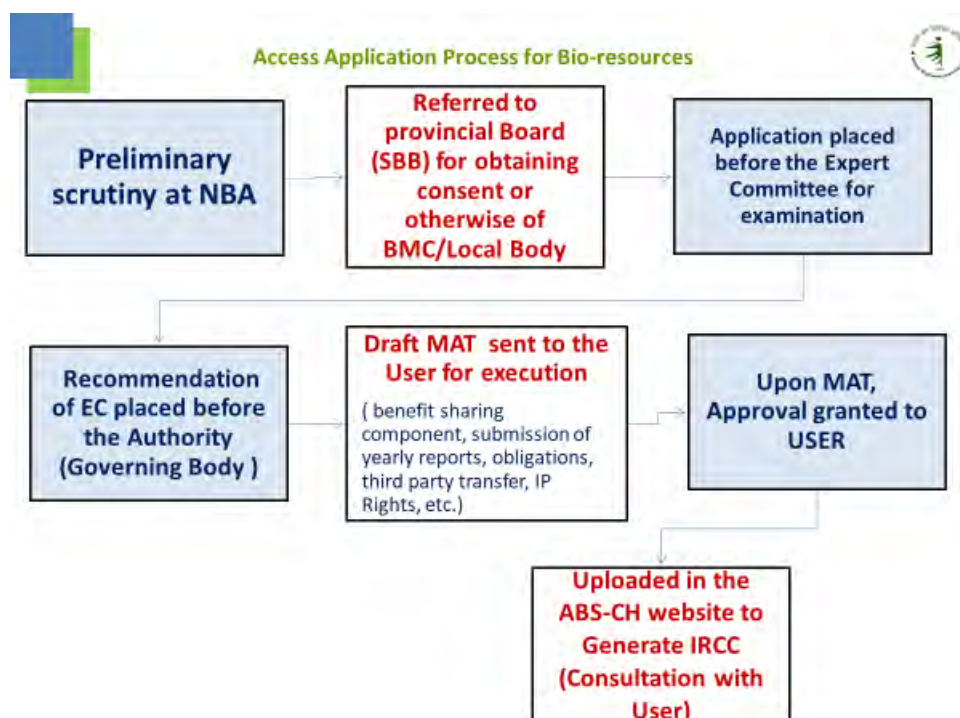

Fig. 15: Flow Chart India

7.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- In India you use the term biological resources. What is covered under this definition? Biological resources means plants, animals and micro-organisms or parts thereof, their genetic material and by-products (excluding value added products) with actual or potential use or value, but it does not include human genetic material.
- The Biological Diversity Act was enacted in 2002 on the lines of the CBD. To implement the provisions of the Biological Diversity Act, the National Biodiversity Authority (NBA) was established in October 2003. A question raised by participants related to the institutional structure for implementing the Biological Diversity Act. Why does India use the service of the so-called State Biodiversity Boards? India is a diverse country where many different languages are used. State biodiversity boards are established by the State Governments and have three main functions: (1) They advise the State Government, subject to guidelines issued by the Central Government, on conservation of biodiversity, sustainable use of its components and equitable sharing of benefits; (2) They regulate by granting of approvals or otherwise requests for commercial utilization or bio survey and bio utilization of any biological resource by Indians; (3) They perform other functions as necessary to carry out the provisions of the Act or as prescribed by the State Government.
- Should users approach local communities directly under the Indian ABS system? No, India uses a “single window” approach for users. The user only needs to address the National Biodiversity Authority (NBA) which is responsible for granting approval for access. The NBA engages with the community.
- How does India address the situation where traditional knowledge is owned by more than one local community? Would a mapping of places with TK be worth considering? In India, all agreements are signed by the national state authority. Authorities are often not informed how many communities hold this knowledge. Benefits are channeled to the national state authority and then sent back to the community. A mapping of all places with TK in India is not feasible due to the sheer size of communities holding traditional knowledge throughout the country.
- If a non-Indian user is doing research with a biological resource from India, is a distinction made between commercial and non-commercial research? Research for both commercial and non-commercial purposes requires prior approval by the relevant authority.
- India takes samples of genetic resources that are being used for research and development. If the volume of ABS agreements increases, taking samples may become a burden. For now, this approach is possible because there are only around 1200 access agreements.
- In India, recorded TK exists in ancient texts. This information has been translated into English and recorded in the Traditional Knowledge Digital Library (TKDL). Patent offices have access to this network. A team scrutinizes all patent applications as soon as they are published through a database. They may file an objection report if prior art exists in a particular case.
- Does India have a timeline for access to genetic resources? The timeline is 6 months.

In many cases it is not possible to get approval within 6 months for several reasons: receiving information from the applicant takes times. Further, expert committees from all parts of the country need to meet which only occurs once every two months.

8 Access Procedures of Brazil

Mr. Marcelo Böhlke, Head of the Environment Division (DEMA), Ministry of Foreign Affairs of Brazil, ABS National Focal Point;

Mr. Rafael Marques, Brazilian Ministry of Environment and Management Council of Genetic Heritage (CGen)

Fig. 17: Mr. Marcelo Böhlke

Fig. 16: Mr. Rafael Marques

8.1 Country Presentation

General information on ABS

Status of ratification of CBD and Nagoya Protocol

Brazil ratified the Convention on Biological Diversity in 1994 and implemented it in its national legal order by means of Decree 2519 of 16 March 1998. Brazil signed the Nagoya Protocol on Access to Genetic Resources and the Fair and Equitable Sharing of Benefits Arising from their Utilization to the Convention on Biological Diversity in 2011 and has not ratified it yet. The Nagoya Protocol is still under consideration by the National Congress. It is expected to be approved by the National Congress soon, so that the Government will be able to ratify it.

Legal framework for ABS implementation

The two main pieces of legislation regarding ABS implementation are Law n. 13,123/2015 and Decree n. 8,772/2016. This new legislation comes to replace the former Provisional Measure 2186-16 of 23 August 2001.

Law n. 13,123 of 20 May 2015 sets out the general framework for access to genetic resource, for protection and access to associated traditional knowledge and for benefit-sharing for the conservation and sustainable use of biodiversity.

Decree n. 8,772 of 11 May 2016 complements the provisions contained in Law n. 13,123 by providing details on the Genetic Resource Management Council (CGen, the Brazilian National Competent Authority), associated traditional knowledge, the electronic National Management System of Genetic Resource and Associated Traditional Knowledge (SisGen), benefit-sharing, administrative offenses and penalties, National Fund for Benefit-Sharing (FNRB), among other issues.

The main objectives of the new legislation are to ensure: legal certainty, low transaction costs, benefits channeled to conservation, fair and equitable sharing of benefits and promoting access to genetic resources and associated traditional knowledge and foster innovation.

A key concept in the Brazilian legislation is that benefit-sharing is the only way to facilitate access.

Benefit-sharing is the guarantee of access/utilization facilitation. This represents an intermediate position between genetic resources user views (who tend to prioritize rules facilitating access/utilization with less concern with benefit-sharing obligations) and genetic resources provider approach that may require too strict rules for access authorization making genetic resource research and development difficult to make.

This approach is essential to create trust among the parties which may be key to a functional international ABS system. Brazil has developed this understanding after 15 years of internal debate based on the peculiar position of being at the same time a strong user of exotic genetic resources and a megadiverse provider of genetic resources and associated traditional knowledge.

Institutional framework for ABS implementation

The institutional framework for ABS in Brazil is comprised of: Genetic Resource Management Council (CGen): CNA; Benefit-Sharing National Fund (FNRB): insurance for users and traditional knowledge holders; Benefit-Sharing National Programme (PNRB): guidelines for the use of FNRB funds; Electronic System of GR and TK (SisGen): single window. Compliance authorities (IBAMA, in some cases with the Ministry of Agriculture, Livestock and Supply or the Navy Command); Checkpoints: SisGen, ANVISA, Patent Office (INPI), Cultivar National Authority (RNC); Traceability system: CNPq, CTNBio, SISCOMEX, INPI, ANVISA, RFB, SNIIC and other databases.

CGen is a normative, advisory and appellate Council, responsible for coordinating the development and implementation of policies for managing all the access to genetic resource and associated traditional knowledge and benefit-sharing, composed by representatives from different entities and bodies of the federal public administration with jurisdiction over the different actions, in a maximum of 60% (sixty percent), and by representatives from members of society, in no less than 40% (forty percent), ensuring parity of: business sector; academic sector; and indigenous peoples, traditional communities and traditional farmers.

Law 13,123/2015 provides that research and development is to be carried out freely. There is no PIC requirement for access/utilization of genetic resources without associated traditional knowledge. A registration is required only at the time of publication of the results, or upon application for a patent, or before introduction of a product on the market.

Access to associated traditional knowledge is dependent on obtaining prior informed consent. Proof of prior informed consent can occur at the discretion of the indigenous population, traditional community or traditional farmer, by means of the following documents according to regulations: signed prior consent; registered audiovisual consent; statement from the official governing body; or adherence to the provisions set forth by community protocol.

The Brazilian National Focal Point is the Ministry of Foreign Affairs.

How to access genetic resources or associated traditional knowledge in Brazil

Law 13,123/2015 provides that research and development is to be carried out freely. PIC has been granted and MAT has been defined by means of legislation by the National Congress for access or utilization of genetic resources without associated traditional knowledge. Access to associated traditional knowledge is dependent on obtaining prior informed consent from the owner or the provider of the traditional knowledge (intellectual property right). Proof

of prior informed consent can occur at the discretion of the indigenous population, traditional community or traditional farmer.

Access to genetic resource or associated traditional knowledge can be carried out within the country by: national legal or natural person, public or private; or a legal person based abroad associated to a national scientific and technological research institution, public or private.

Shipment of genetic resource sample to a foreign country with the purpose of access must be previously registered at SisGen.

Sending a sample containing genetic resource to a foreign country by a national legal person, public or private, for services as part of research or technological development must be registered along with access registration at SisGen.

No difference between access for commercial and non-commercial purposes

According to the Brazilian legislation, access to genetic resource means research or technological development carried out on genetic resource samples. There is no difference between access for commercial and non-commercial purposes.

The benefits resulting from economic exploitation of finished goods or reproductive material arising from access to genetic resource of species found in *in situ* conditions or to associated traditional knowledge, even if produced outside the country, will be shared in a fair and equitable way.

In the case of a finished product, the genetic resource or the associated traditional knowledge component must be one of the key elements of value adding to the product.

Only the manufacturer of the finished product or the producer of the reproductive material will be obliged to share benefits, regardless of who has previously carried out access activities.

The manufacturers of intermediate products and developers of processes originating from the access to genetic resource or associated traditional knowledge along the production chain will be exempted from benefit-sharing obligations.

Procedures and timelines for access to genetic resources or associated traditional knowledge

There is no timeline for access to genetic resources.

There is a need for prior informed consent and mutually agreed terms with regards to traditional knowledge associated with genetic resources. It is a private contract between the provider and the user of traditional knowledge. There is no direct interference from the state.

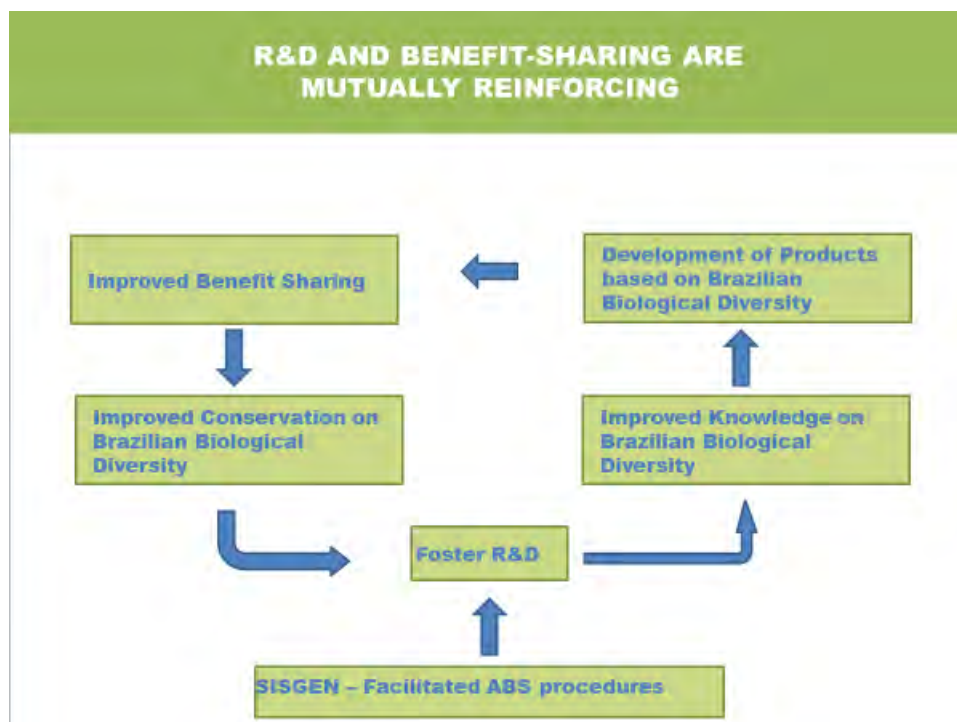

Fig. 18: Flow Chart Brazil

8.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- Legislation on ABS in Brazil was adopted in 2000. New domestic legislation on ABS was adopted in 2015: Law 13, 123 / 2015 and Decree 8, 772/2016. The main objectives of the new ABS legislation are: legal certainty, low transaction costs, benefits channeled to conservation, assuring fair and equitable sharing of benefits, promoting access to GR and TK and foster innovation. A question that arose was whether applications have ever been rejected under the earlier system of Brazil. This has been the case when the Genetic Resource Management Council CGEN (CNA) found that benefit-sharing was not fair and equitable. Most often users renegotiated with resource providers and applications were approved.
- Brazil's new approach is based on the following premise: Assured benefit-sharing in the future is the guarantee of access / utilization facilitation at present. This approach is essential to foster trust among the parties which is key to a functional ABS system.
- Why is there no need to obtain prior informed consent (PIC) and enter into mutually agreed terms (MAT) for genetic resources under Brazil's new approach? Brazil aims to facilitate research and development. It uses an administrative verification process after registration, a traceability system and other measures to guarantee benefit-sharing.
- To access genetic resources in Brazil, neither a PIC nor a negotiated MAT is required. Instead Brazil uses a registration system. Does Brazil give registrations a reference number or are they just for internal use? At the end of the process, the user receives a certificate which is being sent to the ABS Clearing-House. Registration in Brazil is considered as an Internationally Recognized Certificate of Compliance (IRCC).

- Is benefit-sharing in Brazil fixed or is there a margin for negotiation? Concerning genetic resources, there is a fixed percentage for monetary benefit-sharing (1% of annual net revenue). Concerning traditional knowledge, the user must negotiate with the TK provider and pay 0.5% to the benefit-sharing national fund (FNRB). The FNRB provides legal certainty and insurance for users and TK holders.
- In Brazil, the use of genetic resources includes the use of digital sequence information.

9.1 Country Presentation

REGULATORY FRAMEWORK ON ACCESS TO GENETIC RESOURCES AND DISTRIBUTION OF BENEFITS IN PERU

Overview

Peru is a megadiverse country that is the center of origin of many species of flora and fauna, many of them under the wild, cultivated or domesticated, which are important for global food security, health and comfort, and valuable for their own characteristics and function into the ecosystems.

All of these species represent the genetic potential of the country, and in many cases, are closely associated with the traditional knowledge of the communities and farmers who maintain them and give multiple uses, from food, natural medicines, fuel, industrial (cosmetics, gourmet foods, and others), employing many traditional techniques; and which are also part of their traditional customs as knowledge and all of their Andean and Amazon worldview.

II. Legal Framework

International

- The Convention on Biological Diversity, ratified by Peru through Legislative Resolution N° 26181 of 1993.
- The International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA). Peru signed on October 8, 2002 and ratified on June 5, 2003 by Supreme Decree N° 012-2003. Effective since 2004.
- The Nagoya Protocol on access to genetic resources and the fair and equitable sharing of benefits arising from their utilization. Ratified by Peru on August 7, 2014 and entered into force on December 10, 2014.

Regional

- Decision 391 of the Andean Community of Nations - CAN. establishes a Common Regime

on Access to Genetic Resources. Approved in July 1996.

National

- Law N° 27811, Law that establishes the regimen of protection of collective knowledge of indigenous people linked to biological resources, published August 10, 2002.
- Supreme Decree N° 003-2009-MINAM, that ratifies the approval of the Regulation on Access to Genetic Resources, published on February 7, 2009.
- Supreme Decree N° 018-2015-MINAGRI, published on September 30, 2015, approves the Regulation for Forestry Management, which include the genetic access regulation of wild flora species.
- Supreme Decree N° 019-2015-MINAGRI, published on September 30, 2015, approves the Regulation for Wildlife Management, which include the genetic access regulation of wildlife species.

III. National Competent Authorities

The Peruvian Regulation on Access to Genetic Resources (S.D. N° 003-2009-MINAM) establishes the National Competent Authorities, called *Administration and Enforcement Authorities* for Access to Genetic Resources, and are the follows:

- a. Ministry of Agriculture (currently represented by the Peruvian Forestry and Wildlife Service-SERFOR): for genetic resources, molecules, combinations or mixtures of natural molecules, including raw extracts and other derivatives contained in wildland species, such contents may be found in all or part of the plant or animal specimen, including Class Amphibia, and microorganisms. The Ministry of Agriculture evaluates requests for access to genetic resources of wild relatives of species cultivated in coordination with INIA.
- b. Peruvian Institute of Agrarian Innovation (INIA): for genetic resources, molecules, combination or mixture of natural molecules, including raw extracts and other derivatives contained in cultivated or domestic species. The content can be found in all or part of the specimen;
- c. Ministry of Production – Vice Ministry of Fisheries: for genetic resources, molecules, combination or mixture of natural molecules, including crude extracts and other derivatives contained in the marine and inland water hydrobiological species. The content can be found in all or part of the specimen.

Likewise, the Peruvian Regulation on Access to Genetic Resources states that the Ministry of the Environment-MINAM is the regulatory authority for access to genetic resources; and guides and supervises the management of access to genetic resources; and also constitutes the National Focal Point for the Nagoya Protocol.

In addition, in relation to traditional knowledge (TK) in Peru, the Competent Authority is the National Institute for the Defense of Competition and Protection of Intellectual Property-INDECOPI, which works closely with the Ministry of Culture.

Finally, INDECOPI, and the National Commission against Biopiracy (Comisión Nacional contra la Biopiratería), are the checkpoints for monitoring the utilization of genetic resources.

IV. Procedures for Access to Genetic Resources

The authorization for the access to genetic resources is improved with a contract for access to genetic resources. In addition to the contract for access to genetic resources, exists the genetic material transfer agreement (MTA), which is a simplified contract for transfer of genetic material between *ex situ* conservation centers, based in the country and only for research purposes.

The requirements for the Contracts are:

- Application addressed to the CNA.
- Identification of the provider of the genetic resource (and TK if applicable), generally represented by Research Authorization.
- Research Plan.
- Curriculum vitae of the principal investigator.
- Letter of presentation of each participant of the project.
- Letter of agreement with National Support Institution (according the concept on S.D. N° 003-2009-MINAM).
- Accessory contracts in accordance with current regulations.
- Prior informed consent of the communities (for the case of access to associated traditional knowledge).
- Payment receipt (if applicable).

The scheme for the analysis and granting of the contracts is (basically) as follows:

IV. Implementation of Nagoya Protocol in Peru

The Nagoya Protocol in Peru is under implementation, by the coordination of the Ministry of the Environment, with the National Competent Authorities, INDECOPI, the Ministry of Culture, among other institutions.

Currently with the Regulations of Forestry and Wildlife Law (S.D. N° 018-2015-MINAGRI and N° 019-2015-MINAGRI), the basic taxonomic research was exempted of the contracts for access to genetic resources, complying with the article 8a) of the Nagoya Protocol, in order to facilitate the basic research. The SERFOR includes into the Research Authorizations, compliance clauses in order to secure mutual agreement terms related to this basic research.

Finally, all the Peruvian authorities are working to improve their capacities, principally in terms of negotiation.

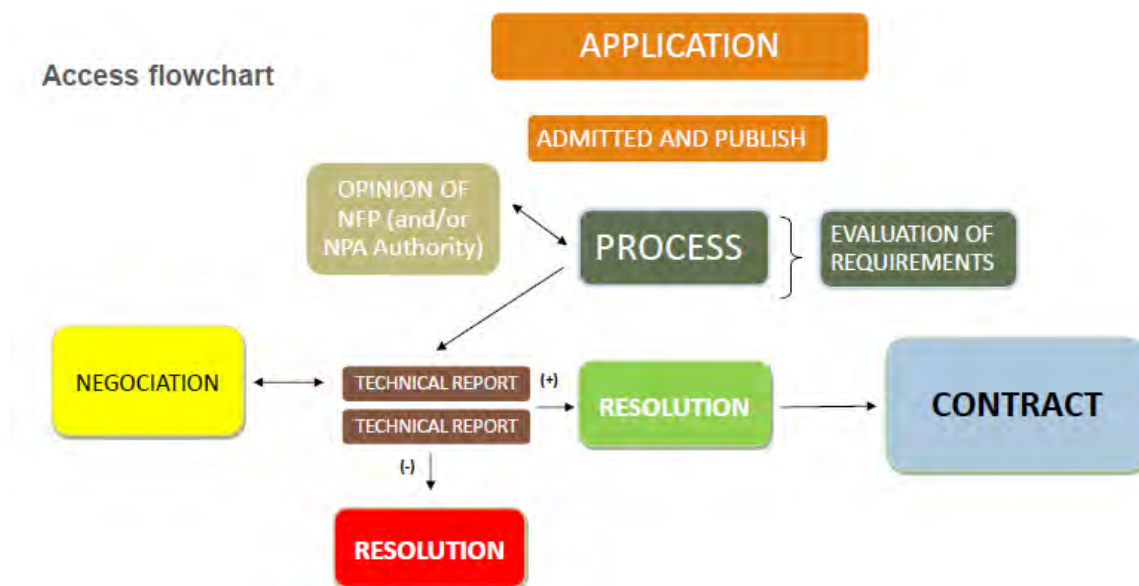

Fig. 21: Access flowchart Peru

9.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- In Peru, different competent national authorities manage access procedures, depending on the type of genetic resources sought and used. Peru has three CNAs: The National Forest and Wildlife Service (SERFOR) for wild fauna and flora, the National Institute of Agrarian Innovation (INIA) for cultivated and domestic species and the Ministry of Production (PRODUCE) for hydrobiological marine and freshwater species.
- Peru is bound by the regime on access to genetic resources established by Decision 391 of the Andean Community (CAN), dating from 1996. This Decision is a pioneer regulation applicable to all Andean member countries. It establishes general principles for ABS, as well as specific requirements and procedures. An update of the Decision is underway and is expected to be finalized by 2018. Likewise, Peru has its own regulatory framework, Supreme Decree N ° 003-2009-MINAM, Regulation for access to genetic resources.
- Authorisation from the local community (native and peasant communities according to Peruvian regulation) is required for access to genetic resources from a community and traditional knowledge associated to genetic resources. This authorisation is a requirement of the access procedure requested by the CNAs.
- In addition to CNAs, Peru has established the National Commission Against Biopiracy that works as a checkpoint. Its role is to investigate applications for patent protection in other countries with a link to Peruvian biological resources or associated traditional knowledge.
- The number of access permits granted in Peru reached 90 until 2016, between SERFOR and INIA, however the majority of them were issued for taxonomic purposes only. In application of article 8a) of the Nagoya Protocol, SERFOR implemented a regulation specific for taxonomic research (TR), allowing TR only with research

permits. For that reason, the contracts ranged from 22 (year 2014) to 01 (year 2016). Insight was sought by participants as to why the number of contracts decreased. In response it was clarified that all contracts were for taxonomic purposes only (and the last one concerned natural protected areas).

- Peru is expecting to consolidate its own ABS system and start the issuance of contracts for applied research and commercial purposes by 2018.

10 Access Procedures of Kenya

Mr. Mukonyi Kavaka Watai, National Chair ABS Committee, Head Bioprospecting, Kenya Wildlife Service

Fig. 22: Mr. Mukonyi Kavaka Watai

10.1 Country Presentation

Kenya has been recognized among the mega diverse rich biodiversity countries in the world with varied biological resources distributed in wide range of ecosystems, from marine, saline lakes, montane, desert like, equatorial rain forest to fresh water. The country is rich in both wild and agriculture based biological resources. These biological resources and associated knowledge are accessed and utilized by wide range of stakeholders ranging from, local communities, academia, industrialist, tourists and ex-situ conservation. Recent survey reveals an increased demand for the country's genetic resource for research and development as seen from the publications and patents granted and assign to major companies in Europe, USA and local research institutions. Regardless of the increased demand of the countries genetic resources for various uses there is a challenge in matching the accrued benefits impact to conservation at the resource provider side. Therefore there is a need for an appropriate framework for the equitable share of resultant benefits between providers and users to promote conservation of species and gene diversity for the present and future generations.

In this regard, Kenya has recognized the importance of its biological resources and established access measures that govern access and utilization of genetic resources. Biological resource access and utilization are governed by the country's supreme law, the constitution and the subsequent national legislations and county laws. Kenya's resource management is devolved at the national and county level and each has rights and obligations in granting various user rights on access and utilization of the genetic resources. The key frameworks governing access to the countries genetic resources include the relevant multi-lateral agreement ratified by the country at the international level, namely the Convention on Biological Diversity (CBD) and its two protocols Nagoya and Cartagena, the International Treaty on Plant Genetic resources for Food and Agriculture's (ITPGRFA), Intellectual property conventions under the WIPO treaty and plant breeders. Specifically Kenya ratified Nagoya Protocol in May 2014. These MEAS are enforced both at the constitution and domesticated under national legislations such as the Environment Management Coordination Act 2015 and its regulation and access and benefit sharing 2006, the Wildlife (Conservation and Management) Act 2013, Forest Act 2016, Seed and plant varied Act 2016, Traditional knowledge and cultural expression Act 2016, Bio safety Act 2012 and Science Technology and Innovation act 2012.

Currently the country does not have a substantive ABS law but access and utilization are governed under the ABS regulation legal notice 160 supported by other relevant laws. The country is in the process of development of a substantive ABS law. There are various stages of access granting process in the country ranging from permitting process, acquisition and export. It is advisable to plan well and understand all the requirements, during the access process that is from proposal development, application, acquisitions and export of the material including the Intellectual property process and technology transfer level. The key requirements include a Prior Informed Consent (PIC) and Mutual Agreed Terms (MAT) and Material Transfer Agreement (MTA) from designated resource providers, research permits from National Council of Science and Technology (NACOST), access permit from NEMA as evidence of grant of PIC, MAT and research permit and export permit from KWS accompanied by Phytosanitary from KEPHIS and for animal department of veterinary services. Genetic resources under Annex 1 are handled by Genetic resource institute (GERRI) and approval for R&D involving genetically modified organisms is by the National bio safety Authority (NBA). The ABS permitting process under different institutions is online, although it has not been integrated. There are efforts being supported by the GIZ-implemented ABS Capacity Development Initiative to create a single window permitting system to promote and facilitate applications thereby creating a favourable environment for R&D.

The country has recognized the ABS based R&D as a major tool to valorize its genetic resources leading to enhanced benefits and therefore it is in the process of establishing the appropriate legal, institutional and policy framework that will attract investments in this sub-sector and promote conservation and livelihoods of its citizens.

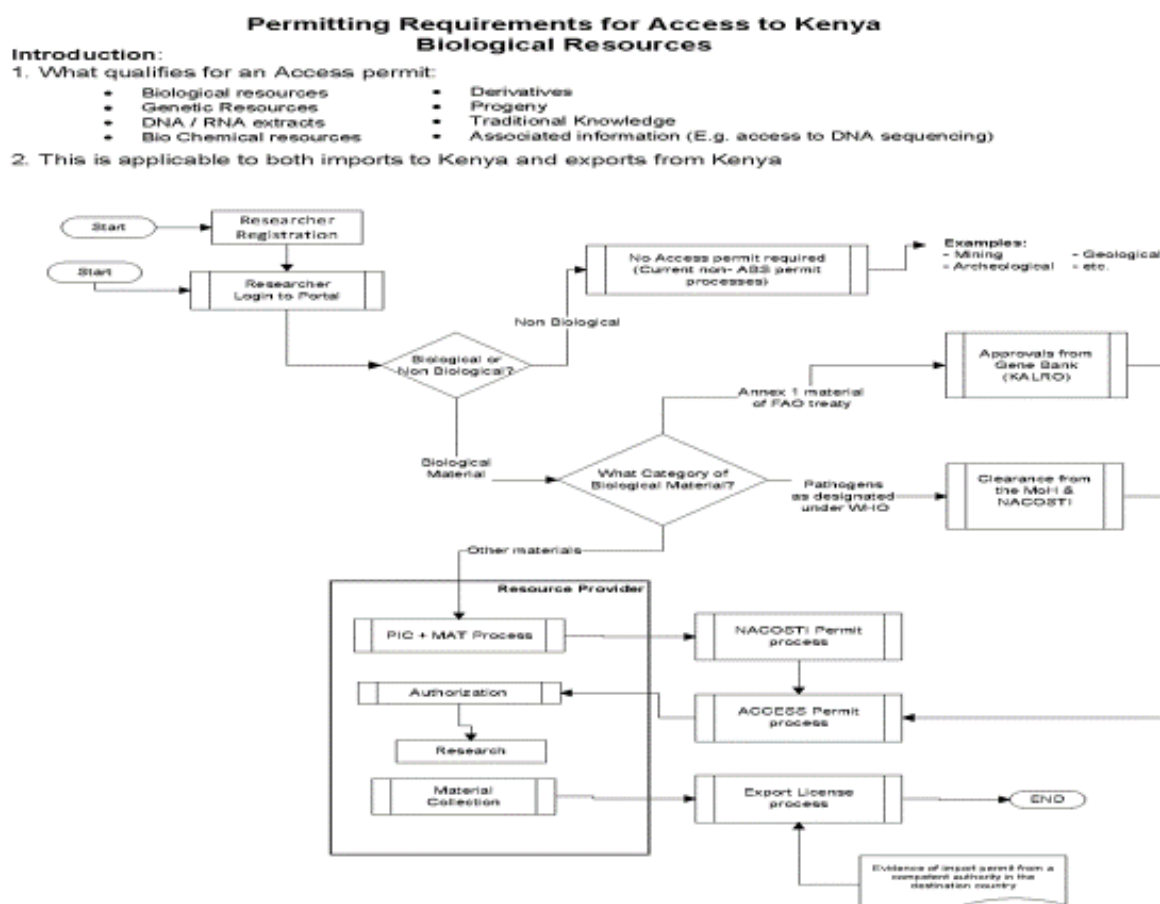

Fig. 23: Flow Chart Kenya

10.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- A distinction is made between genetic resources and biological resources. What are the different processes? Kenya's ABS law includes access to intangibles derived from biological or genetic resources. There is no major difference between biological resources or genetic resources as biological resources include the genetic resources. For Kenya, genetic resources include the coded information in the material such as the digital sequence information (DSI). The process includes a pre-application process of PIC, MAT and proposal with the provider, research approvals by the National Council for Science Technology and Innovation (NACOSTI) and approvals for access permits by the National Environmental Management Authority (NEMA). All applications begin by NACOSTI. More details can be obtained on the ABS-CH.
- Once the researcher deposits a strain outside Kenya, how do you control depositories outside of Kenya? Both commercial and non-commercial research is regulated. How can this be controlled practically? It is a challenge. Users need to send back the catalogue numbers of the collection. Kenya is developing a unique identifier system to link in-situ collections with ex-situ and the permitting process. The access and ex-situ repository obligations are covered under PIC, MAT and MTA. The utilization value chain is covered in the contracts and the parties are to comply. Although it is a

challenge where parties deposit various components such as DNA, DNA sequences in databases and genebanks that are later accessed by third parties contravening the agreements. Most of the ex-situ and databases have not established Nagoya instruments for PIC and MAT. Kenyan authorities will monitor this and check whether all obligations in the material transfer agreement have been followed.

- How are intellectual property issues being regulated? Kenya always undertakes IP audit and encourages all projects to develop standard operating procedures (SOPS) which include management of IP issues. Kenya has a strong IP system ranging from patents, copyrights and plant varieties. Any IP issues including related technology transfer are regulated in MAT.
- Kenya established an ABS regulation in 2006 which was operationalized in 2008. Since 2009 71 permits have been granted (all non-commercial). Kenya focuses on clear systems of MTA and MAT as agreed upon in the PIC. Initially applications were being published in a gazette notice for feedback but this has been reviewed. Currently Kenya develops in partnership with the GIZ-implemented ABS Capacity Development Initiative an online integrated permitting system that brings together all agencies involved in this process to create a kind of “single window”. This will accelerate and facilitate R&D on Kenyan biological resources. At the same time the country is reviewing its laws specifically the ABS regulations and has also proposed to develop a substantive ABS law to comply with the provisions of the Nagoya Protocol.

Compulsory documents for access demand application	yes	In Kenya we have the PIC, MAT and MTA step, the permit step which involves both the research and access permit then the export step when the material is being exported or imported. All these steps are various access demand applications. 1. Application at the provider, one needs a copy of passport, an affiliation letter from a local institution, a letter of intent, proposal, completed application form, PIC, MAT and MTA. 2. Process of acquiring permits at NACOSTI and NEMA. At NEMA, you require to fill the application form, joint proposal, payment of the access permit, a copy of the Prior Informed Consent, and Mutually Agreed Terms (MAT -which is either MOU or MOA) document signed by the providers and the users .At NACOSTI : Affiliation letter from local counterpart, Letter of Intent and Partnership MOU and Project proposal abstract. The applicant proceeds to apply for researcher's pass or visa stamp issued by the Department of Immigration Services. The Pass is required by NEMA together with letter of affiliation for processing of access permit. http://meas.nema.go.ke/abs/download/Access%20and%20Benefit%20Sharing%20brochure%20final.pdf .Upon export you will fill in export application form at KWS which will be accompanied by other approvals, Phytosanitary certificate from KEPHIS, Biosafety certificate among others	NEMA website ,KWS website
Submission of access application at	National Environmental Management Authority (NEMA)		ABS Regulations 2006
Access fees	yes	To apply for an access permit: - for individual access applicants: 20,000.00 KSh - for corporate applicants: 50,000.00 KSh	ABS Regulations 2006

Criteria	Acquired information	Comments	Source
Other permits prerequisite to obtain ABS permit	yes	In addition to the access permit, the permit holder wishing to export GR outside Kenya is required to execute Material Transfer Agreement (MTA) and to apply for either phyto-sanitary or animal health certificate from KEPHIS or Department of Veterinary Services respectively. http://meas.nema.go.ke/abs/download/Access%20and%20Benefit%20Sharing%20brochure%20final.pdf	Nema website
IRCC (Internationally Recognised Certificate of Compliance)	no	Not yet developed	
Have ABS permit(s) been issued in the country?	yes	71 application and 66 granted	NEMA
ABS permit(s) issued by	National Environmental Management Authority (NEMA)	Access permits are issued by NEMA subject to provision of the following documents: i. Research Clearance Licence from the National Commission for Science, Technology and Innovation (NACOSTI) ii. Prior Informed Consent (PIC) granted to users by resource providers, and iii. An agreement based on MAT between resource provider and users NEMA invites ABS Technical Committee to determine the application taking into consideration the comments from the public and other stakeholders. After approval of the ABS Technical Committee, it recommends to NEMA to issue an access permit. http://meas.nema.go.ke/abs/download/Access%20and%20Benefit%20Sharing%20brochure%20final.pdf	Nema website
Average timeline (from access demand to permit)	timeline defined	NEMA shall, within sixty days of receipt of an application for an access permit, determine the application and communicate its decision in writing to the applicant. Also various demand points at PIC MAT process, NACOSTI and NEMA. About 3 month the whole application process	ABS Regulations 2006
MAT(s) signed	yes	Various MAT and PIC have been signed	KWS and NEMA documents
MAT(s) to be signed with	Provider /user legal entities	They are derived from PIC process and signed as either MOU or MOA between the legal providers and	KWS website NEMA

Criteria	Acquired information	Comments	Source
		users	website NA-COSTI website
Standard MAT clauses	yes	A sample MAT format can be found in Appendix II of Kenya's ABS Toolkit .This are subje to negotiation but vary	Nema website
PIC(s) granted	yes	PIC is provided by a lead agency (designated resource provider by the law , local community or private resource manager. An overview of lead agencies can be found in the ABS Tool Kit (p. 23)	
PIC(s) to be granted by	Designated resource provider (lead agency) and local communities	PIC is provided by a lead agency, local community or private resource manager. An overview of lead agencies can be found in the ABS Tool Kit (p. 23) Some time these lead agencies are referred to as other competent authorities .	NEMA WEBSITE,KWS WEBSITE

11 Access Procedures of Costa Rica

Ms. Melania Muñoz García, Technical Office, National Commission for Biodiversity Management, Ministry of Environment and Energy (MINAE), ABS National Focal Point;

Mr. José Alfredo Hernández Ugalde, Technical Office of the Ministry CONAGEBIO, Ministry of Environment and Energy (MINAE)

Fig. 25: Ms. Melania Muñoz García

Fig. 24: Mr. José Alfredo Hernández Ugalde

11.1 Country Presentation

Regulatory framework and procedures to obtain permissions to access genetic and biochemical resources in Costa Rica

National Commission for Biodiversity Management (CONAGEBIO)

Ministry of Environment and Energy

Costa Rica

Costa Rica ratified the CBD in 1994 and signed the Nagoya Protocol in 2011, but the ratification of this Protocol is still in process. Besides that, an ABS regulation is in implementation, and it contains the main NP elements, including Prior Informed Consent and Mutually Agreed Terms between supplier and user (see figure 26):

- Biodiversity Law 7788 (1998)
- General norms to access genetic and biochemical elements and resources of the Biodiversity Decree 31514 (2003)
- Norms to access genetic and biochemical elements and resources in *ex situ* collections Decree 33697 (2007)
- Regulation for the application of administrative sanctions on non-authorized access to genetic and biochemical elements and resources, established in the Biodiversity Law Decree 39341 (2016)

Information about CNA and NFP can be found in ABS-CH and CDB website:

- Competent National Authority. Mrs Angela González Grau (CONAGEBIO)
- ABS Focal Point. Mrs Melania Muñoz García.
- 8J Focal Point. Mrs Alejandra Loría Martínez.

The national legislation established three kinds of permissions:

- Basic research: Activity to investigate, examine, classify or increase existing knowledge over biological elements in general or their genetic or biochemical characteristics in particular, without immediate interest in commercializing its results.
- Bioprospection: The systematic search, classification and research for commercial purposes of new sources of chemical compounds, genes, proteins, and micro-organisms, with real or potential economic value, which are found in biodiversity.
- Commercial use: Occasional or constant use of the biochemical or genetic elements and resources of biodiversity for commercial purposes, without necessarily being preceded by a basic research or bioprospection program as part of the application.

Exclusions:

- Biochemical or genetic material of human origin, which is regulated by General Health Law No. 5395 and related legislation.
- Exchange of biochemical or genetic resources among the indigenous people and local communities, nor to the associated knowledge resulting from their non-profit making practices, uses or customs.
- The provisions of this law do not affect university autonomy in the matter of teaching or researching in the field of biodiversity, except if the research has commercial purposes.

More than 500 permits have been granted by Costa Rica since 2004 (see table 8)

Procedures to grant permission to access genetic and biochemical resources in indigenous territories and traditional knowledge are under development. A participatory process and a consultation must be performed with all indigenous territories to build and validate these norms.

Information and technology development:

- CONAGEBIO website www.conagebio.go.cr
- Virtual platform
 - Access Permits to Genetic and Biochemical Resources of biodiversity.
 - Database and better tracking of the distribution of benefits generated.
 - National Register of Systematic *ex situ* Collections.

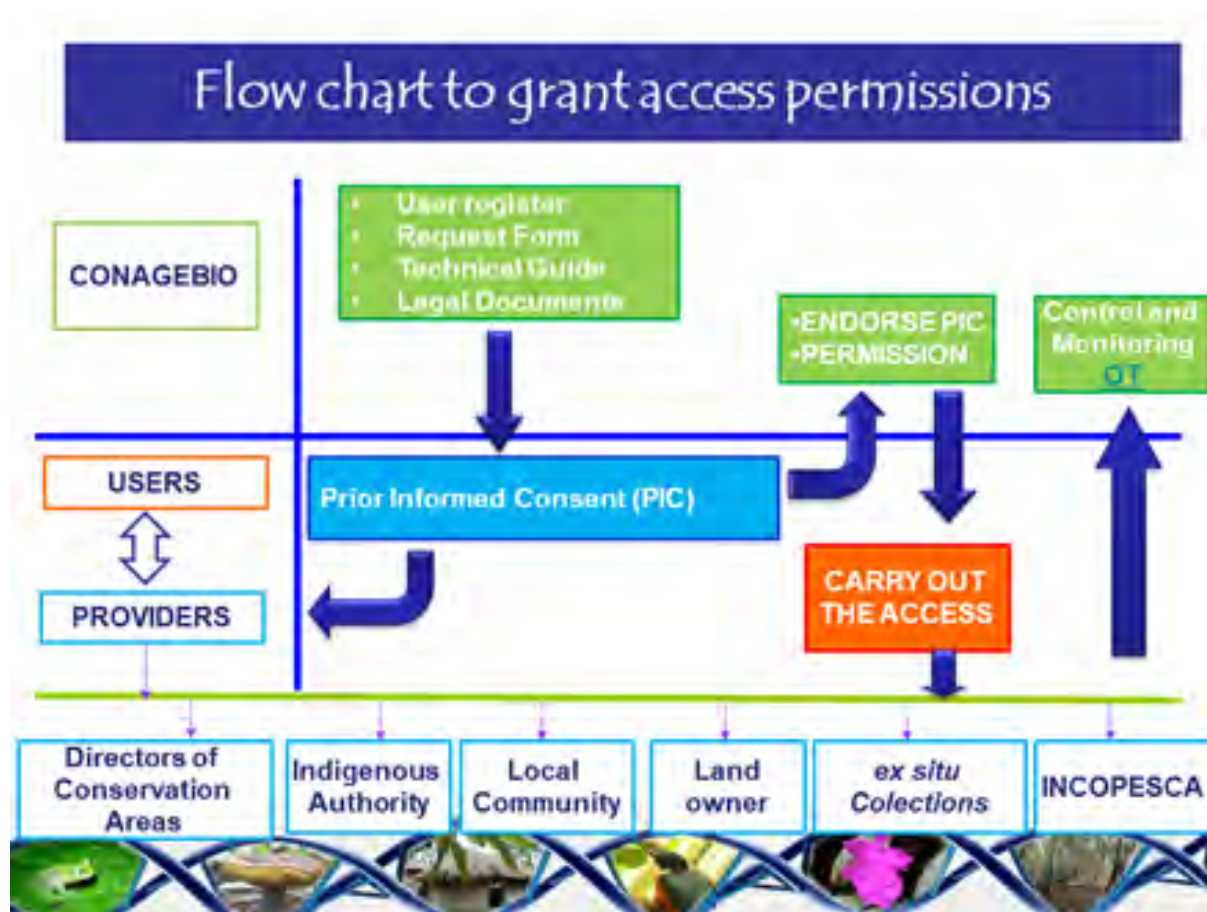

Fig. 26: Flow chart to grant access permissions

Tab. 8: Access permits granted during 2004- August 2017 according to research type

Permits	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	Total
Basic Re-search	2	25	26	24	38	32	40	25	37	46	38	50	48	32	463
Bioprospection	2	4	4	6	4	1	11	5	1	10	2	2	4	2	58
Commercial use	0	0	0	0	0	0	0	0	0	0	0	0	1	0	1
Total	4	29	30	30	42	33	51	30	38	56	40	52	53	34	522

General requirements:

1. Registration form
2. Application form
3. Technical Guideline
4. Copy of the project or fore-project to be carried out.
5. Prior informed consent (PIC) between the applicant and supplier. The prior informed consent and the mutually agreed terms could be reached and negotiated according to the model contract prepared by the Technical Office of CONAGEBio.
6. Photocopy of applicant's national ID or passport
7. If the applicant and/or the supplier is a juridical person, Juridical ID and photocopy of national ID or passport of the legal representative.
8. If the applicant(s) is a physical or juridical person residing abroad, he/she will designate a legal representative residing in the country.
9. Documents or representation powers, if needed.
10. Submit, if any, the agreement and/or contract and/or material transfer agreement, subscribed between national or foreign, physical or juridical persons, if they foresee access to the country's genetic and biochemical elements and resources.
11. For basic research or bioprospection, besides what is indicated above, the applicant must submit written formal commitment where it is manifested that, in case of modification of the permit's aims whether for bioprospection or commercial use, the requirements established for each case will be fulfilled.
12. For access to *ex situ* collections, the applicant must sign the code of conduct provided by the Technical Office of CONAGEBio

Notes:

The signatures of the documents must be authenticated, or the parties may sign in front of the officials of the Technical Office of CONAGEBio

All documents must be submitted in Spanish

The forms can be completed in the virtual platform available on the website of Conagebio

For occasional or regular commercial use:

Besides what is pointed above, the applicant must include:

1. Description of the commercial use of the genetic and biochemical elements or resources of biodiversity pretended to be extracted or the traditional knowledge associated.
2. General information about the project's economic feasibility.

11.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- In Costa Rica there are different types of permits. Permits for (1) basic research, (2) for bioprospection, (3) commercial use. The maximum permit period in Costa Rica is three years. What if the permit is granted for commercial purposes? The maximum permit period is limited to three years but it is possible to apply for an extension before the permit expires.
- How can it be ensured that benefits are fair and equitable? In Costa Rica, ABS contracts need to be endorsed by CONAGEBIO. CONAGEBIO signs a confidentiality agreement and can decide whether it endorses the contract.
- When users enter into contracts with farmers, private reserves or national reserves, how is it possible to address a situation of competition? Further, how can it be ensured that a farmer is sufficiently capacitated to undertake an ABS negotiation? Since the user may choose the contracting party, there is no competition. CONAGEBIO may advise resource providers but is not taking part in the contract negotiation.
- If a resource is available with more than one provider, how can you avoid the situation of competition? There are permits that include more than one provider.
- If the location of access is in more than one conservation area, do you need to ask permission from each conservation area? No, the user can sign a written document and all contracts will be sent to CONAGEBIO. CONAGEBIO may then grant the permit.
- If a user plans to access a particular resource in Costa Rica and requires several providers to obtain sufficient quantity of genetic material, is there any kind of coordination? The researcher may coordinate with different providers and sign only one contract (with several providers). However, it is strongly recommended for the user to enter into a contract with each provider.

12 Access Procedures of Philippines

Ms. Theresa Tenazas, Chief Legal Unit, Biodiversity Management Bureau

Fig. 27: Ms. Theresa Tenazas

12.1 Country Presentation

I.BACKGROUND OF ABS IN THE PHILIPPINES

The Convention on Biological Diversity (CBD), to which the Philippines is a Party, is the first global agreement which focuses on the conservation of biological diversity, the sustainable use of its components, and the fair equitable sharing of benefits arising from the use of genetic resources. The Philippines became a member party on January 6, 1994.

The Nagoya Protocol is a supplementary agreement to the Convention on Biological Diversity (CBD). It provides a transparent legal framework for the effective implementation of one of the three objectives of the CBD: the fair and equitable sharing of benefits arising out of the utilization of genetic resources. The Philippines became a member-party on December 28, 2015

II.WHAT IS THE LEGAL FRAMEWORK OF ABS IN THE PHILIPPINES?

The Philippines was one of the first countries to come up with a policy on access to biological and genetic resources through Executive Order 247.

E.O. 247 aims to ensure that in the prospecting of biological and genetic resources, these resources are protected and conserved, developed and put to sustainable use for the benefit of the Filipino community.

Thereafter, Republic Act No. 9147 of 2001 otherwise known as the “Wildlife Resources Conservation and Protection Act” was passed on March 19, 2001. The Act provides for the conservation, preservation and protection of wildlife species and their habitats, in order to preserve and encourage ecological balance and biological diversity; it provides furthermore, for the control and supervision of wildlife capture, hunting and trade; finally it provides for supporting and promoting scientific research on the protection of biodiversity.

After years of implementing Executive Order No. 247, the Philippines realized the need to establish specific guidelines on benefit-sharing; parameters to determine the amount of bio-prospecting fee and performance bond to be collected from or posted by the researchers, scheme for the payment of royalty, and a well-defined collaborative monitoring system. Thus,

on January 12, 2005, the Joint DA-DENR-PCSD-NCIP A.O. No. 01 of 2005, Guidelines for Bioprospecting Activities in the Philippines was passed.

III. Salient features

- Sets a uniform procedure for evaluating and granting access to biological resources
- Being a joint DENR-DA-PCSD-NCIP issuance, it shall set a uniform procedure for evaluating and granting access to biological resources and avoid the potential problem of inconsistency of bioprospecting regulations for various components of biodiversity under management jurisdiction of different government agencies (DENR, DA and PCSD).
- The National Commission on Indigenous Peoples (NCIP) was added as co-signatory to the joint Administrative Order to ensure that the bioprospecting regulations shall apply to ancestral domains covered by Indigenous Peoples Rights Act (IPRA).
- The guidelines shall apply to research on biological resources for commercial purposes only.
- Redefined “The research, collection, and utilization biological and for purposes of applying the knowledge therefrom solely for commercial purposes”.

IV.SCOPE OF BIOPROSPECTING

- Biological resource found in the Philippines including wildlife, microorganisms, domesticated or propagated species, and exotic species
- All ex-situ collections of biological resources sourced from Philippines except for collections currently accessed under international agreements where Philippines is a party
- All areas including protected areas, private lands, ancestral domain and ancestral lands consistent with Indigenous Peoples Rights Act (IPRA)
- of species listed under the Appendices on International Trade in Endangered Species (CITES) and World Conservation Union Red List, whenever by law.

V.Exempt activities

The Guidelines shall not apply to the following uses of biological resources:

- Traditional use;
- Subsistence consumption;
- Conventional commercial consumption for direct use such as logging or fishing;
- Scientific researches on wildlife under Section 15 of the Wildlife Act;
- Scientific researches_on agrobiodiversity; and
- Existing procedures of collection and transport of wildlife species exclusively for commercial or conservation breeding or propagation under Sections 17 and 24 of the Wildlife Act.
 - The development of medicinal plants for traditional or alternative medical use shall be primarily governed by the Traditional and Alternative Medicine Act
- Scientific studies, conducted by researchers with no commercial interests and purely

for academic purposes, using biological resources for taxonomy or solely for the characterization of biological, chemical or physical properties of the biological resources.

VI. INSTITUTIONAL ARRANGEMENTS

Who are the implementing agencies of the joint Bioprospecting Guidelines?

The lead agencies implementing the joint Bioprospecting Guidelines are:

- DENR, through the Biodiversity Management Bureau (BMB), for terrestrial biological resources;
- DA, through the Bureau of Fisheries and Aquatic Resources (BFAR), for aquatic resources;
- PCSD, for biological resources in the Province of Palawan; and,
- NCIP, for matters concerning indigenous peoples (IPs).

VI. Who are the signatories of the Bioprospecting Agreement?

In Accordance with Section 14 of the Wildlife Act, bioprospecting shall be allowed only upon execution of a Bioprospecting Undertaking (BU), between the resource user and the Secretary of the DA and/or DENR, if the biological/genetic resource is a terrestrial and aquatic, respectively.

When the bioprospecting activity is to be conducted in the Province of Palawan, the Chairperson of the PCSD, as authorized by the Council, shall be a co-signatory to the BU;

VII. What is “Bioprospecting Undertaking” or BU

- It refers to the “undertaking” or permit which allows a resource user access to biological resources for bioprospecting purposes
- Contains all the mandatory obligations of the bioprospector to the Philippine government and concerned communities as providers of resource used in the bioprospecting venture.

What is resource user? It refers to the local or foreign individual, company, organization, institution or entity, either public or private that will utilize biological resources in a given area in the Philippines for bioprospecting purposes.

VIII. How much is Bioprospecting fee?

- For foreign bioprospectors: minimum of \$3,000.00 but not more than three times the minimum base on certain criteria.
- For Filipino bioprospectors with no foreign collaborators: 10% of the assessed bioprospecting fee
- For students with no foreign collaborators: 3% of the assessed bioprospecting fee
- No foreign collaborator or investor - ...shall mean that the Filipino resource user does not derive assistance or participation of any kind from a foreign collaborator, partner, donor or investor involved directly or indirectly in bioprospecting.
- No commercial interest - ... shall mean that the researcher or collector has no track record of involvement in commercial product development or application for intellectual property rights over inventions using or derived from biological resources. Furthermore, the researcher or collector must not have any local or foreign collaborator,

partner, donor or investor involved directly or indirectly in bioprospecting.

IX. Benefit Sharing

1) Payment of Annual Royalties (2% of global sales) in case a product is commercialized to be shared equitably by:

- The Government (thru PCSD, DA, or DENR) to accrue to the Wildlife Management Fund and concerned communities/private land owner where biological material was sourced

2) Annual user's fee for resource provider, communities/private land owner:

- For foreign bioprospectors: \$1,000/collection site/ annually

- For local bioprospectors with no foreign collaborators: 10% of \$1000 (or \$100)/ annually

3) Non-monetary benefits for resource providers

- Equipment for biodiversity inventory and monitoring
- Supplies and equipment for the resource conservation activities
- Technology transfer
- Formal training including educational facilities
- Infrastructure directly related to the management of the area
- Health care
- Other capacity building and support for in-situ conservation and development activities

Is there a difference between commercial and non commercial use?

- The Joint DENR-DA-PCSD-NCIP ADMINISTRATIVE ORDER NO. 1 defined bioprospecting as research, collection and utilization of biological and genetic resources for purposes of applying the knowledge derived therefrom solely for commercial purposes only.

X. DURATION OF COLLECTION

- Collection of samples under the BU shall not exceed three (3) years from the date of execution
- Renewable for succeeding periods but not more than three (30 years
- All other terms of the BU shall remain in force until such time when all obligations have been performed.

XI. What are the general guidelines in negotiating for benefit sharing?

1. The resource user shall negotiate with the resource provider through representatives that the resource provider may designate. Decisions of the representative shall be binding on the resource providers unless a formal process of ratification is reserved.

2. When there is more than one (1) provider-group in the area, each provider-group shall designate one (1) representative to the negotiations.

3. Representatives of each provider-group may negotiate collectively or separately with the resource user.

4. However, only one (1) BU shall be executed

XII. What are the general guidelines in negotiating for benefit sharing?

The resource user and providers shall come to an agreement regarding payments of monetary and non-monetary benefits. The negotiated benefits shall be given by the resource user, in the amounts and periods agreed upon, to the government and resource providers, where applicable:

XIII. What are the general guidelines in negotiating for benefit sharing?

Any other commitments made and agreed upon by the resource user and any of the provider-group as conditions for the granting of the PIC shall be separate and independent from the benefits and fees prescribed in the joint Bioprospecting Guidelines.

All payments made by the resource user to any provider-group are non-reimbursable even if no profit is eventually realized from the bioprospecting activity.

XIX. What are the step by step procedures and timeliness for access to genetic resources?

Where to file application?

Depending on the kind of biological resources to be collected and the place of collection, application for a BU may be submitted to any of the implementing agencies:

- BMB for terrestrial resources
- BFAR for aquatic resources
- PCSD and BFAR for aquatic resources in the Province of Palawan, or PCSD and BMB for terrestrial resources in the Province of Palawan, or all three (3) agencies for aquatic and terrestrial resources in the Province of Palawan
- BMB and BFAR for both terrestrial and aquatic resources in all other areas outside the Province of Palawan.

XX. What are the requirements for obtaining a BU?

The following are required prior to the issuance of a BU:

- Letter of intent (LOI)
- Three copies (3) of the research proposal
- Duly accomplished application form
- Company/Institution/Organization/Agency profile
- PIC/FPIC Certificate from resource providers
- Summary of the agreed terms of benefit sharing with resource providers
- Documentary proof of compliance to procurement of PIC/FPIC
- Application/Processing fee of Five Hundred Pesos (Php500.00)
- Others as may be required by the government agency concerned

XXI. What are the Procedures for Securing a BU:

1. Submission of standardized application (w/ proposal) to BMB, BFAR, or PCSD together with:

- a) Letter of acceptance from Filipino Collaborator
- b) Payment of application fee (P500.00)
- 2) Submission of Prior Informed Consent Certificate/s
- 3.) Review of application by BMB, BFAR or PCSD and drafting of the BU
- 4) Final Evaluation of the bioprospecting application and draft BU by the technical/bio-prospecting committee of respective agency (within 15 days).
- 5.) Endorsement of the BU to the concerned Secretary for approval
- 6) Approval/disapproval of the BU (within one month)
- 7) Posting of Performance/Rehabilitation bond in the form of surety bond (25% of project cost)
- 8) The Bioprospector may proceed on with the collection activity.

*Payment of Bioprospecting fee shall be in accordance with the agreed schedule as contained in the BU.

XXII. What is the procedure for processing applications for a BU?

Step 1. Submission of application and initial requirements

- Letter of Intent (LOI)
- Duly accomplished application form
- Research proposal
- Company/Institution/Organization/Agency profile
- Application/Processing fee (Php 500.00 only)

Step 2. Initial evaluation

- BMB, BFAR and/or PCSD accepts the application, checks the completeness of the initial requirements, and determines whether the application is covered by the joint Bioprospecting Guidelines. They may consult with their respective or joint Technical Committees in the initial evaluation.
- If the application involves species under the management jurisdiction of DA, DENR and/or PCSD, the concerned agencies shall jointly conduct the initial evaluation. There shall only be one (1) evaluation process and only one (1) BU concluded.

Step 3. Submission of additional requirements

Upon verification that the application is within the coverage of the joint Bioprospecting Guidelines, BMB, BFAR and/or PCSD shall require the applicant to submit the following additional requirements:

- PIC/FPIC Certificate from resource providers following the procedure for obtaining the PIC/FPIC
- Documentary proof of compliance with other relevant requirements under Annex 1 of the joint Bioprospecting Guidelines
- Summary of agreed terms of benefit sharing

- Letter of acceptance from local collaborator
- SEP clearance from PCSD, if bioprospecting is to be conducted in the Province of Palawan only
- Others as may be required by the government agency concerned

Step 4. Preparation of the BU

- Upon verification that all requirements are complete, the concerned agency prepares a draft BU incorporating the terms agreed upon by the resource user and provider.
- In case the bioprospecting activity involves species under multiple jurisdictions, the concerned implementing agencies consolidate all submitted documents, endorse the application to the joint Technical Committee, and jointly prepare the draft BU.

Step 5. Final evaluation by the Technical Committee

- Within fifteen (15) days after receipt of the complete requirements, the respective or joint Technical Committees make a final evaluation of the application as contained in the draft BU.
- The draft BU is forwarded to the appropriate signatories (DENR Secretary, DA Secretary and/or Chairperson of the PCSD) with recommendation for approval or rejection.

Step 6. Decision of appropriate agencies

- Within one (1) month from the submission of the recommendation of the Technical Committee, the appropriate agencies render a decision regarding the approval or rejection of the BU.

Step 7. Posting of rehabilitation/ performance bond

- Within thirty (30) working days after the signing of the BU, the resource user posts a rehabilitation/performance bond in the form of a surety bond, in an amount equivalent to twenty-five percent (25%) of the project cost as reflected in the research budget.

Step 8. Collection of samples

- The resource user may collect samples only after posting the bond. Collection of samples is undertaken in accordance with the collection quota indicated in the BU. Failure to post the bond is a basis for rescission of the BU.

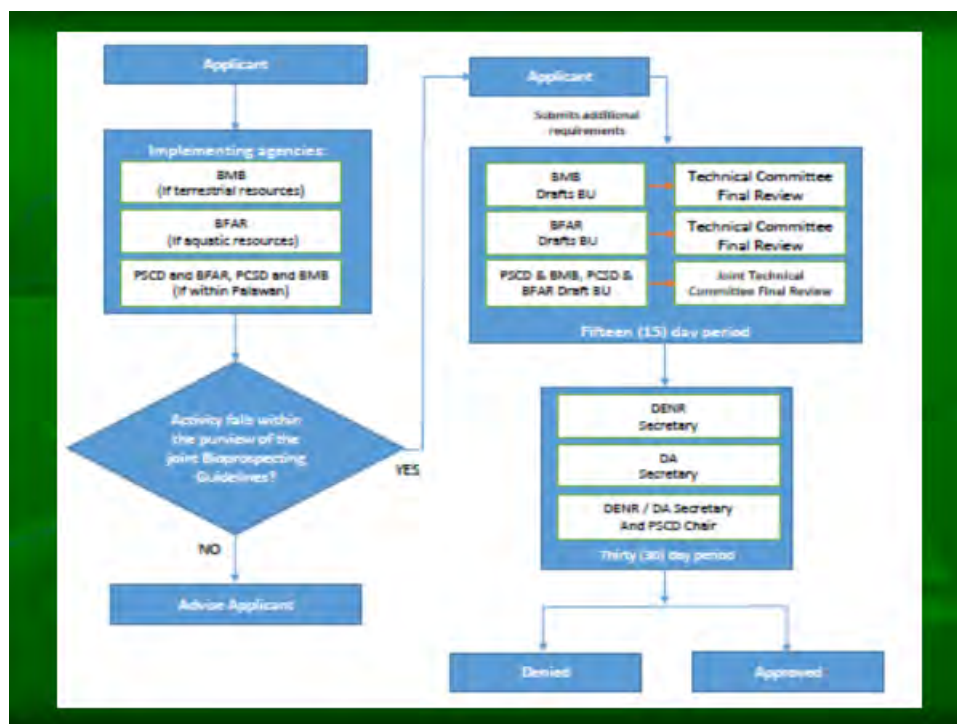

Fig. 28: Flow Chart Philippines

12.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- The Philippines formulated a framework legislation on access to genetic resources. Executive Order (EO) No. 247 was issued in 1995 “Prescribing Guidelines and Establishing a Regulatory Framework for the Prospecting of Biological and Genetic Resources, their By-Products and Derivatives, for Scientific and Commercial Purposes”. Subsequently, the Department of Environment and Natural Resources (DENR) issued in 1996 the Department Administrative Order No. 96-20 or the Implementing Rules and Regulations of the EO. EO 247 is one of the important national instruments for addressing the interests of the government, as well as those of local and indigenous communities, in relation to benefit-sharing from the use of biodiversity. Later on, to address the restrictive approach of EO 247, Joint DENR-DA-PCSD-NCIP Administrative Order No. 01 entitled “Guidelines for Bioprospecting Activities in the Philippines” was issued. The joint guidelines establish a more comprehensive and effective mechanism to regulate bioprospecting activities and also responds to recent developments such as the enactment of the Wildlife Resources Conservation and Protection Act or R.A. 9147 of 2001.
- How is benefit-sharing negotiated in the Philippines? The user shall negotiate with the provider through a representative that the provider may designate.
- Is it possible to make an online application to access genetic resources in the Philippines? An application can be made online however, due to the volume of the documents involved and since translation is not yet available in other languages, the user is encouraged to apply in person or through the chosen local counterpart chosen. It is obligatory to have a local counterpart if you want to conduct research and development on genetic resources in the Philippines.

- Free prior informed consent is operational in the Philippines. Users need to obtain free prior informed consent from indigenous local communities before undertaking bioprospecting activities.
- How long does it take from handing in an application for access to genetic resources until final approval? The timeline is around thirty days.

13 Access Procedures of South Africa

Ms. Lactitia Tshitwamulomoni, Biodiversity Officer Control BABS Policy Development and Implementation, Department of Environmental Affairs, ABS National Focal Point;

Mr. Nomusa Mbuyazi, Biodiversity Officer, Department of Environmental Affairs

Fig. 30: Ms. Lactitia Tshitwamulomoni

Fig. 29: Mr. Nomusa Mbuyazi

13.1 Country Presentation

Summary of the presentation on access procedures of South Africa's framework legislation & associated regulations on Bioprospecting, Access & Benefit Sharing.

South Africa is the 3rd most biodiverse country in the world, it occupies 2% of the world's land area. It consists of 15% of the world's coastal marine species, 10 % of the world's plant species and 7% of the world's reptiles, birds and mammals. South Africa became party to Nagoya Protocol since 12 October 2014 when the Protocol entered into force and deposited ratification instrument on 10 January 2013 and the signature was deposited on 11 May 2011.

The Bioprospecting, Access and Benefit Sharing (BABS) Regulations, 2008 made under the National Environmental Management Biodiversity Act (NEMBA), Act 10 of 2004 entered into force on 1 April 2008 which have since been amended. The BABS Amendment Regulations came into force on 19 May 2015 and prescribe the notification process for the discovery phase of bioprospecting involving any indigenous genetic and biological resources contemplated in section 81A (2) of the Act and further prescribe the permit system set out in Chapter 7 of the Act insofar as that system applies to bioprospecting involving any indigenous genetic and biological resources or export from the Republic of any indigenous genetic and biological resources for the purpose of bioprospecting or any other kind of research. In addition, the BABS Amendment Regulations set out the form and content of, and requirements and criteria for benefit-sharing and material transfer agreements and the administration process of the Bioprospecting Trust Fund.

The Department of Environmental Affairs is the Competent National Authority and the Focal

Point for ABS. According to the BABS Regulations 2015, the permit may be applied by or granted to a juristic person registered in terms of SA law, a natural person, who is a SA citizen or a permanent resident of SA or a non-juristic or natural person jointly with a juristic or natural person in terms of SA law. The issuing authority must consider & decide on any permit application or notification within 120 working days after the receipt of such an application, if satisfied that all the prescribed & requested information has been submitted.

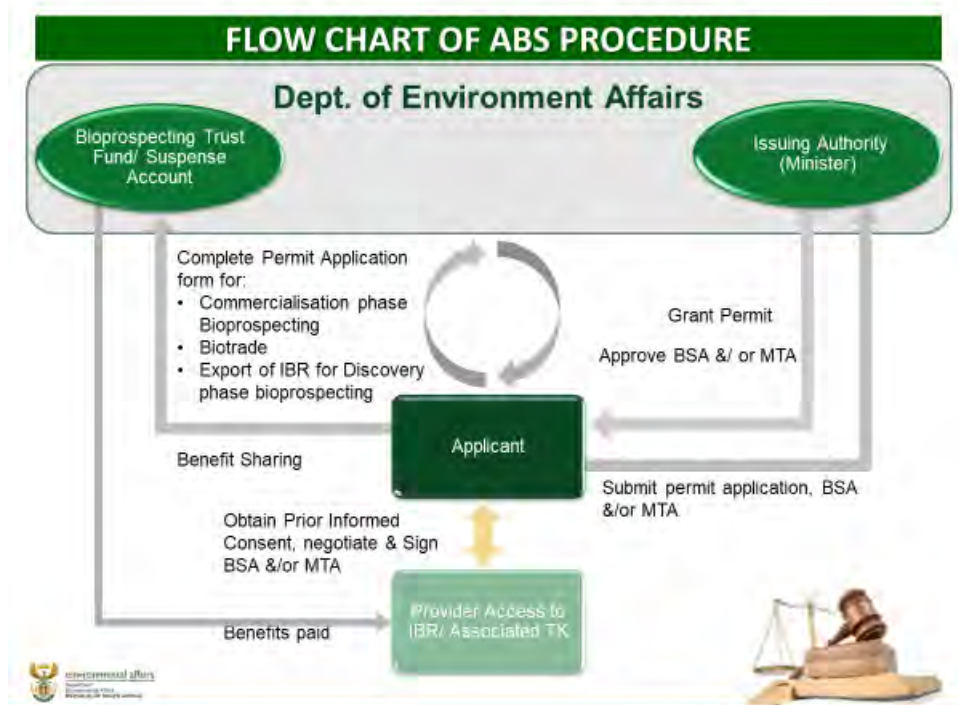

Fig. 32: Flow Chart South Africa 2

13.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- South African law has a very wide definition of bioprospecting. The Biodiversity Act defines “indigenous biological resource” to include any living or dead organism of an indigenous species, any genetic material or derivatives of such organisms, or any chemical compounds and products obtained through use of biotechnology that have been altered with genetic material or chemical compounds found in use of their genes or biochemicals. It was enquired at what point a South African indigenous biological resource such as *Hoodia* falls outside the scope of ABS when it has been obtained in a country outside of South Africa. As long as the resource itself can be traced back to South Africa, it falls within the scope and is covered by South African ABS legislation. The issue of controlling access however is not yet operationally addressed, because there are no practical case studies.
- While it is useful to clearly differentiate between genetic resources and associated traditional knowledge, the line is not always clear-cut. For example, traditional knowledge may be used traditionally as a spice, but it may never have been used as a fragrance. If possible national ABS systems should define what falls under genetic resources and what falls under traditional knowledge. South African ABS legislation provides mechanisms to deal with genetic resources only and also to deal with genetic resources and associated traditional knowledge.
- What is not always clear is whether the material is used as commodity or genetic resource. The species may be sold as a commodity, but if research and development is undertaken on this resource, it falls within the scope of the Nagoya Protocol. It was put forward by participants that one way to address this issue is to make a declaration that the resource is explicitly meant for trade purposes and if the buyer aims to undertake research and development, he / she is obliged to comply with the obligations of the Nagoya Protocol.

PIC(s) to be granted by	Minister	The applicant must provide documentary proof that PIC was granted by the Access Provider and TK Holders, thereafter, the Minister approve issuance of a permit	ABS-CH

14 Access Procedures of Australia

Mr. Ben Phillips, Director Protected Areas Policy and Planning, Australian Government Parks Australia, ABS National Focal Point

Fig. 33: Mr. Ben Phillips

14.1 Country Presentation

The federal system of government in Australia means that responsibility for granting access to genetic resources can sit within the jurisdiction of national and sub-national levels of government. The Australian Government has had legislation regulating access to genetic resources within its jurisdiction since 2005. The stated purposes of the legislation are important – importantly, the purposes include providing certainty and minimise administrative cost as well as ensuring the equitable sharing of benefits arising from the use of genetic resources. Permits are given for access if there is a benefit-sharing agreement between the user and the provider of the resource and if access is ecologically sustainable. The time required to process a permit does depend on the complexity of the permit, but Australia generally can issue a permit in under one week. The benefit sharing agreement comes in two forms. The first is simple with standard requirements binding the user to non-commercial use and reporting conditions, the second is a more expansive contract which can allow for commercial use and corresponding benefit sharing requirements.

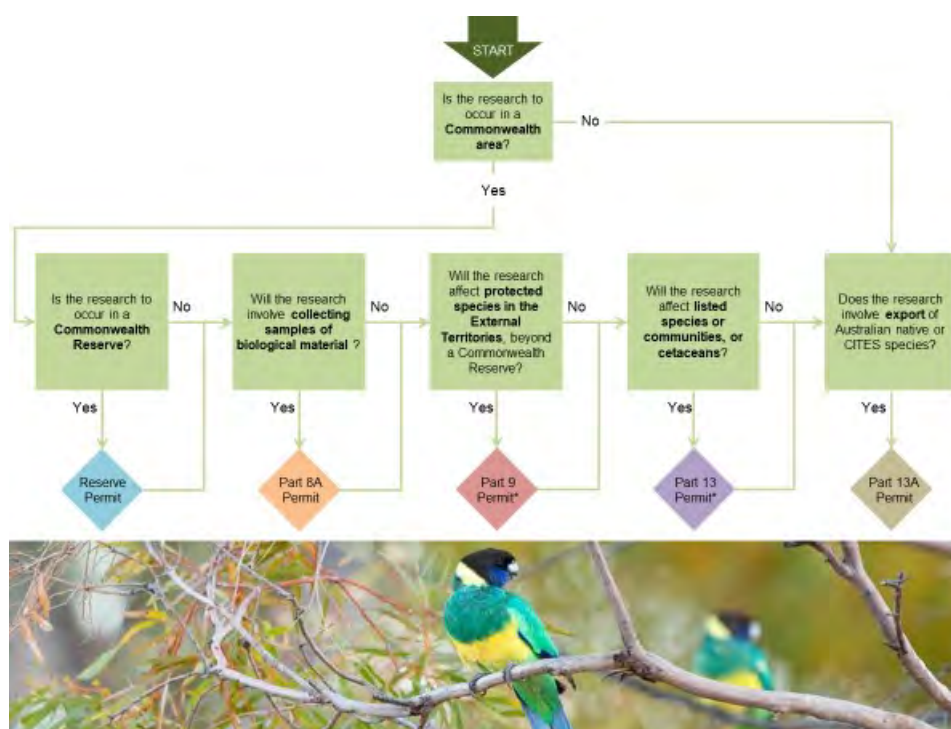

Fig. 34: Flow Chart Australia

14.2 Questions and Answers

The following is a summary of key questions raised and issues discussed in plenary:

- In comparison to many other national ABS systems, there is no obligation to have a local counterpart to conduct research and development on genetic resources in Australia.
- With respect to future steps, there is an intention in Australia to ratify the Nagoya Protocol. Australia must have all measures in place to implement obligations before ratification. Australia would need to make some amendments in its legislation particularly on the user side and to take more account of traditional knowledge.
- Different states are access providers. The Australian government does not have jurisdiction over the resources in the different states. Each state has different rules. There are nine governments who could potentially be established as CNAs. A single point of contact (“super CNA”), a role to be played by the Australian Government, would be preferred by many actors.
- Like in Brazil, the entry into the national ABS regime is very easy. Australia aims to encourage research for knowledge, understanding and innovation. It focuses on legal certainty, further reducing transaction costs and flexibility.
- A commercial benefit sharing agreement is fully negotiable. A model of a standard commercial legal agreement exists.
- Regarding permit approval, up to 5 permits may be required to conduct research and development in Australia. The user will not receive an ABS permit if another requisite permit is missing.

PIC(s) to be granted by	Minister (or delegate)		

15 Synthesis of Issues raised in the Q&A Sessions

A number of key issues were raised in the Q&A sessions, including the following:

- In most countries a local counterpart is a prerequisite for foreigners wishing to undertake research on genetic resources and / or associated traditional knowledge (aTK) in the provider country. Information on potential collaboration partners is available in many countries. Further, many ABS systems distinguish between access for commercial and non-commercial purposes.
- What constitutes PIC and MAT differs depending on the national context. Under the Brazilian law for example, access to genetic heritage does not require PIC as such but is subject to an electronic registration system (the National System for the Management of Genetic Heritage and Associated Traditional Knowledge). According to the Biodiversity Law in Costa Rica on the other hand, PIC includes MAT (PIC (Costa Rica) = PIC + MAT).
- It is key to involve and empower local communities in ABS processes. In some countries (e.g. Peru) consent from the local community is required to access not only traditional knowledge but also genetic resources held by local communities. A key question that arose in this context related to ownership issues in the case where the traditional knowledge is held by several communities. Examples from countries documenting traditional knowledge were also briefly introduced (e.g. the Indian Traditional Knowledge Digital Library).
- Intellectual property rights (IPR) play a key role for ABS. ABS regimes address IPR to varying degrees. Generally, intellectual property aspects are to be considered in ABS contracts to ensure a fair and equitable sharing of benefits arising from the utilisation of genetic resources and aTK.
- Many countries are in the process of establishing online application systems for access to genetic resources / aTK. In some countries a full online application for access to genetic resources can be made, in other cases a user may apply online but is required to sign the application in person.
- An issue that sparked a debate among participants concerned a clause in the Ethiopian ABS regulation which determines that an access applicant who is a foreigner shall present a letter from the competent authority of his national state or that of his domicile assuring that they will uphold and enforce the access obligations of the applicant. Participants argued that it is not possible for Competent National Authorities in Europe or elsewhere to assume this role for several reasons (principle of sovereignty, human resources, etc.).
- Benefit-sharing options can differ depending on the national context. Some countries have set up national benefit-sharing funds and predetermined benefit-sharing percentages in their national laws.
- There is a need for more capacity-building, especially with regard to IP tools for the protection of traditional knowledge. A question that arose in this context was whether intellectual property could be a sufficient tool to protect traditional knowledge. Some participants pointed out that there is little awareness and understanding of the various intellectual property instruments that exist to protect traditional knowledge associated with genetic resources.

- The discussions also drew attention to the importance of populating the ABS Clearing-House, a key instrument aimed at providing transparency on procedures for access, and for monitoring the utilization of genetic resources along the value chain, including through the internationally recognized certificate of compliance (IRCC).
- Further, the visualization of ABS procedures in the form of flowcharts was considered useful by many participants. User representatives enquired whether such documents could be made available on the ABS Clearing-House.

16 Key Access Questions

In this session, moderated by Suhel al-Janabi, participants identified key access questions and „take home“ messages from this meeting. These can be summarized as follows:

- A(ccess) and B(enefit-sharing) need to be linked. Many countries have established strict access rules to prevent misappropriation of GR. Users and providers of GR/ aTK have different concerns and these need to be brought together. A key question that needs to be addressed in this regard is: How can we ensure benefit-sharing in order to facilitate access?
- Benefit-sharing should be targeted for the conservation of biodiversity. Many countries directly involve the local people, which is to be considered a good approach. If benefits are shared among the local populations this will help encourage them to conserve biodiversity.
- More trust between users and providers of GR / aTK is required to make ABS work. How can this evolve? Discussions revealed that regulations, such as the EU ABS regulation, raise awareness and encourage actors including providers to trust the system.
- There exists a diversity of access rules. How can users learn to navigate given the diversity of ABS systems at country level? It is important to identify the commonalities. Differences can be addressed particularly by guiding users. It is promising from a user perspective that countries aim for more harmonization. It is key to continue in this spirit of cooperation and head towards further collaboration. Further brainstorming may be useful to find out whether variations in approaches can be narrowed down.
- The Nagoya Protocol sets out an obligation for Parties to collaborate. The workshop was an ideal platform to implement this obligation. Further events will be organized to follow up on this collaboration obligation. This meeting has shown that a more informal setting as in Vilm can be very helpful for discussions.
- Information exchange on ABS needs to be continued. Many users wish to comply with national legislation. The central way to advance this exercise of information sharing is to upload information on the ABS Clearing-House. If users comply with ABS rules and regulations, countries will in the long run tend to make access easier for applicants, resulting in more benefits for provider countries (“win-win” situation).
- Access to GR / aTK as such is not the whole picture of ABS. It is crucial for stakeholders to understand the interplay of access and compliance. A workshop organized by the European Commission in November 2017 aims to address this issue. In the future there is also a need to explore value chains from beginning to end, allowing stakeholders to understand how compliance measures were drafted and how the

system works in practice (role of Internationally Recognized Certificates of Compliance, checkpoint communiqués, etc.).

- Behind every access law, there stands a policy objective and this policy objective may change. The objective of the national legislation frames the whole ABS set-up and is therefore fundamental. In Brazil for example, the former ABS legislation focused entirely on access with a view to avoid biopiracy. It took many years to make the ABS approach in Brazil more user friendly since it is very difficult to transform an approach which was developed under a different mindset. However, due to many users in Brazil, the difficulties were understood and the approach was changed.
- There needs to be simplified access to genetic resources for researchers. In France for example, the law restricts researchers by making it difficult for them to apply for access to GR and to obtain authorizations.
- The advantages of online systems for sharing information and permitting processes have been underlined; some countries are in the process of developing online systems.
- European CNAs need to exchange and cooperate with provider countries on cases of non-compliance.
- Peer-to-peer exchange must continue, but it is not the only means. More information needs to be published on the ABS Clearing-House. Uploading access measures on the ABS Clearing-House is important, but providing diagrams / flowcharts would also be very useful. A question that arose in this context was whether provider countries would be willing to upload this information (e.g. with a legal disclaimer) on the ABS Clearing-House.
- Participants agreed that the dialogue contributed to a better understanding of how to access GR / aTK in selected provider countries. It was an excellent opportunity to learn from other countries implementing the Nagoya Protocol and to work on concrete solutions by looking at best practices as well as challenges.

17 Mexico as COP Presidency

Ms. Edda V Fernández Luiselli, Director General for the Primary Sector and Renewable Natural Resources, Underministry for Environmental Promotion and Regulation, SEMARNAT, ABS National Focal Point;

Ms. Romana Alejandra Barrios Perez, Director for Biodiversity, Biosafety and Genetic Resources, Underministry for Environmental Promotion and Regulation, SEMARNAT

17.1 Current Process towards Access Regulations

Mexico in accordance with the recognitions of its natural and cultural capital in terms of number, species, endemism, ecosystems diversity and historic and cultural heritage, as part of the Like Minded Megadiverse Countries Group, has always been an active part of all the negotiation process which resulted in the adoption of the Nagoya Protocol in 2010, and is now promoting its implementation.

In 2014 the Mexican Senate ratified the Nagoya Protocol (NP) and the Executive officially published the Decree in October 10, 2014. In accordance with our Constitution, the compliance with the Nagoya Protocol is mandatory (Article 133). In other words, for Mexico the Nagoya Protocol dispositions are automatic-receiving to the national legal system.

Therefore, the Nagoya Protocol is legally binding in the Mexican territory and to be implemented by the Competent National Authorities (CNAs). Its implementation will be further supported by related secondary legislation.

The current Mexican legislation operative in ABS are the General Law of Ecological Equilibrium and the Protection of the Environment, the General Law of Sustainable Forest Development, the General Law of Sustainable Rural Development and the General Law of Wildlife.

Since 2014, the Ministry of Environment and Natural Resources (SEMARNAT), through the Directorate-General for the Primary Sector and Natural Renewable Resources (National Focal Point), established and coordinates an inter-ministerial working group to implement the Nagoya Protocol in Mexico. This working group is integrated by seventeen governmental agencies belonging to different sectors: Agriculture, Economy, Human Health, Seeds

Inspection, Intellectual Property Office, Indigenous Peoples Commission, Biodiversity Commission, the Environment Sector and Foreign Affairs.

The inter-ministerial group has defined that the subject matters to be regulated under the Nagoya Protocol in Mexico are the ATK, GR and their derivatives. The basic principles to be considered are:

- Alignment with the national legal framework
- Recognition of environmental and cultural values.
- Consideration of:
 - Regulation of all GR and users
 - The State as guarantor
 - Special considerations according Article 8 of NP, including change of intent
 - Beneficiaries: indigenous peoples, local communities, private holders or the Union (ABS National Fund).

As to this date, the working group has designed and adopted a specific process under an administrative approach. This process includes special regimes for commercial and non-commercial access to GR, and involves the participation of the NFP and the CNAs.

The simplified regime for noncommercial purposes has the following characteristics:

- The applications to be resolved in 30 working days by CNA
- PIC: Only for ATK or GR belongs to the IPLCs projects (formats)
- MAT: Response letter to deliver the results to the CNA and the communities as appropriate

The commercial Regime in contrast is:

- The applications to be resolved in 90 working days by CNA
- (from when PIC is granted)
- PIC:
 - IPC
 - LC
- MAT: Access Agreement
- Benefits:
 - Communities
 - National Fund (when it is difficult to define the original provider)

At this moment Mexico has two main CNAs:

- SEMARNAT: Wild Species, Forestry and Soils, Crop Wild Relatives and marine or aquatic species listed in the Endangered Mexican Species List and “other” not covered by SAGARPA

- SAGARPA: Domesticated cultivars, Livestock, zoo and phytosanitary GR and marine or aquatic GR

The National Commission for the Development of Indigenous Peoples (CDI) is the consultative body for advice on indigenous issues and to obtain the PIC.

The Ministry of Foreign Affairs is competent for GR in National Jurisdiction Waters according to UNCLOS.

At the time of the Vilm Dialogue, the NFP has received 32 users consultations regarding the process to obtain an access permit:

Tab. 13: Overview of user consultations and permits granted

User country of origin	Consultations	Permits granted
Germany	6	
Austria	1	
France	5	
UK	2	
Japan	2	1
USA	4	1
The Netherlands	2	
National users	11	
Spain	1	Almost

In parallel to those activities, the inter-ministerial group has also designed and developed a proposal for the secondary law that will further strengthen the legal and technical aspects needed for the implementation of the NP in the Mexican context.

Taking into account Art. 22 of the NP, Mexico designed and presented to GEF a project that focuses on capacity building. The project considers the particularities of Mexican social groups, including indigenous peoples (68) and local communities. The project also considers the improvement of the legal and administrative framework on ABS, while building capacities in relevant governmental agencies such as SEMARNAT, the Ministry of Economy (SE), the Mexican Institute of Industrial Property (IMPI), the Federal Attorney of Environmental Protection (PROFEPA), the National Commission for Natural Protected Areas (CONANP), the Ministry of Agriculture, Livestock, Rural development, Fishery and Food (SAGARPA), the National Commission for the Development of Indigenous Peoples (CDI), and the National Commission for Knowledge and Use of Biodiversity (CONABIO).

17.3 Options for Integrating the Dialogue Results into the Intersessional Period Until MOP3 under Mexican COP/MOP Presidency

The final presentation, held by Ms Edda Fernández, ABS National Focal Point and Director General for the Primary Sector and Renewable Natural Resources at the Underministry for Environmental Promotion and Regulation, SEMARNAT (Mexico) addressed options for integrating the dialogue results into the intersessional period until the Meeting of Parties (MOP) 3 under the Mexican COP / MOP presidency.

Ms Fernandez highlighted that the dialogue has provided very useful information on national ABS procedures and has shown the importance of dialogue between competent national authorities. She indicated that the report of this meeting should be made available at SBI-2 as information document. Further understanding and exchange may be useful on the monitoring system established under the ABS Clearing-House and how it can contribute to benefit sharing.

In her presentation, Ms Fernandez pointed to the importance of experience exchange in workshops. It is key to gather a common understanding on (1) similarities and differences of ABS frameworks and procedures and (2) how monitoring the utilization of genetic resources through the ABS Clearing-House and sharing of experiences would be useful to support benefit-sharing under the Nagoya Protocol. Ms Fernandez also pointed to the need for a better understanding of the system already established and how to use it.

As to next steps, Mexico is considering to host an ABS dialogue in 2018 focusing in particular on associated traditional knowledge, benefit sharing, digital sequence information and possibly Art. 10 with a view to further support the implementation of the Nagoya Protocol.

A one-day workshop over the weekend of SBI 2-SBSTTA 22, taking place in July 2018 in Montreal, may be another opportunity for monitoring and experience exchange between countries.

18 Way forward and Closure

Before the ABS Dialogue was brought to a close, participants were invited to share their ideas concerning future cooperation forms for an effective implementation of the Nagoya Protocol.

These included:

- the exchange of ideas between ABS National Focal Points / Competent National Authorities through a closed blog based on the ABS Clearing-House,
- annual face-to-face dialogues,
- webinars to exchange “hot topics”, emerging issues and ABS cases,
- regular teleconferences with specific agendas to exchange on specific topics,
- identifying case studies that will be taken through the access requirements of a provider country and the compliance measures of a user country and sharing the preliminary findings during a future ABS Dialogue,
- sharing information on patents found by officials of Commissions of Biopiracy with CNAs in the user countries (case of Peru).

Valerie Normand (SCBD) thanked everyone for their active engagement in discussions and encouraged participants to make relevant information available on the ABS Clearing-House.

She also made reference to the meeting of the Subsidiary Body on Implementation (SBI) in July 2018 which aims at considering the assessment and review of effectiveness of the Nagoya Protocol.

Ute Feit (BfN) thanked all participants for sharing their experiences and the facilitators of GeoMedia for organizing this event. She highlighted that the ABS Dialogue 2017 has allowed the champions of ABS implementation to discuss their experiences with setting up and running an ABS system. Lessons learnt will be made available to countries that are in the process of translating the Nagoya Protocol into domestic legislation through an Informative Document and/or a side event at SBI and / or COP 14 / MOP 3. Mrs Feit further informed participants about the second ABS Dialogue on the Isle of Vilm which will be held by the Federal Agency for Nature Conservation in cooperation with GeoMedia GmbH in September 2018.

Overall, the active involvement of the participants and the interactive format of the dialogue contributed to the success of the meeting and provided a good basis for fruitful and rich discussions to advance the implementation of the Nagoya Protocol.

Agenda

Vilm ABS Dialogue – Informing about Domestic Measures for Access to Genetic Resources

August 27 - 31, 2017

at the International Academy for Nature Conservation,
Isle of Vilm, Germany

on behalf of the Nagoya CNA-Unit
of the German Federal Agency for Nature Conservation
(BfN)

Background

After entry into force of the Nagoya Protocol and the corresponding Regulation (EU) No 511/2014, European users of genetic resources are required to "exercise due diligence" to ensure that they have acquired genetic resources or associated traditional knowledge in accordance with the national access procedures of the respective **provider country. In Germany, as in other EU member states, "competent national authorities" (CNAs) for ABS are in the course of formation** and a first meeting of European CNAs already took place in March 2017 on Vilm-Island. One of the discussed implementation challenges was the availability of transparent and reliable national access regulations in provider countries. CNAs, as the German Nagoya CNA-Unit, are repeatedly being asked for information and advice in this regard. But the ABS Clearing House, designed as the key tool for information exchange aiming at enhancing legal certainty, clarity, and transparency on procedures for access to genetic resources, is not yet sufficiently populated and thus does not allow users to gather the relevant information for the vast majority of countries.

To foster the process of implementing the Nagoya Protocol, this first ABS Dialogue on Vilm-Island will give an opportunity to identify and present best-practices on available, clear and transparent access regulations with representatives of CNAs/NFPs of provider countries. In this sense, the objective of the meeting is not to promote facilitated access, but rather to secure transparency, in order to allow users of genetic resources to be better informed by European CNAs towards countries that have structured, clear, and transparent access measures in place.

To identify countries that already have clear and structured transparent access procedures in place, BfN commissioned an overview study to guide the selection and invitation of approx. 10 countries. At the meeting two representatives of each country are asked to present their respective access regulations and procedures. It is further foreseen to compile a summary table of the presented access procedures which will feed into a planned publication in the conference volume (BfN-Script). Furthermore, it is planned to organize a second Vilm Dialogue of the same kind in summer 2018. The meeting will bring together representatives of provider countries (CNAs and NFPs), CNAs from user countries, and further stakeholder representatives.

PRELIMINARY AGENDA

SUNDAY, 27.08.2017

Arrival of the participants on the island of Vilm

18.30 *Dinner*

20.30 Welcome and Brief Introduction to the Meeting

MS. UTE FEIT, MR. THOMAS GREIBER, GERMAN COMPETENT NATIONAL AUTHORITY FOR THE NAGOYA PROTOCOL (BFN)

PARTICIPANTS INTRODUCTION - ALL

21.30 *Informal get-together*

MONDAY, 28.08.2017

07.30 *Breakfast*

08.30 Opening Remarks: The Journey Implementing the Nagoya Protocol

DR. STEFAN LÜTKES, HEAD OF DIVISION N II 1 OF THE FEDERAL MINISTRY FOR THE ENVIRONMENT, NATURE CONSERVATION, BUILDING AND NUCLEAR SAFETY

MS. VALERIE NORMAND, SECRETARIAT OF THE CONVENTION ON BIOLOGICAL DIVERSITY

MS. ALICJA KOZLOWSKA, ABS NFP, ABS-CH INFORMAL ADVISORY COMMITTEE
EU COMMISSION

08.55 Organisational matters

MR. SUHEL AL-JANABI, GEOMEDIA GMBH (APPROX. 5 MIN.)

09.00 Access Procedures of Viet Nam:

Ms. Nguyen Dang Thu Cuc, Head of Division for Genetic Resources and Biosafety Management, Biodiversity Conservation Agency

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)

- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

10.30 *Coffee/ Tea*

11.00 Access Procedures of Ethiopia

Dr. Melesse Maryo, Director General of Ethiopian Biodiversity Institute (EBI);

Mr. Ashenafi Ayenew Hailu, Director, Genetic Resource Access and Benefit Sharing Directorate, Ethiopian Biodiversity Institute (EBI), ABS National Focal Point

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

12.30 *Lunch*

14.00 Guided Tour and Walk through the Nature Reserve of the Island of Vilm

DR. HORST KORN, FEDERAL AGENCY FOR NATURE CONSERVATION (90 MIN.)

15.30 *Coffee / Tea*

16.00 Access Procedures of India:

Dr. Atul Kumar Gupta, Principal Chief Conservator of the Forests and Member of the Secretary, Tripura Biodiversity Board;
Mr. Thangapandian Rabikumar, Secretary, National Biodiversity Authority

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

18.30 *Dinner*

20.00 *Informal get-together*

TUESDAY, 29.08.2017

07.30 *Breakfast*

09.00 Access Procedures of Brazil:

*Mr. Marcelo Böhlke, Head of the Environment Division (DEMA),
Ministry of Foreign Affairs of Brazil, ABS National Focal Point;
Mr. Rafael Marques, Brazilian Ministry of Environment and
Management Council of Genetic Heritage (CGen)*

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

10.30 *Coffee / Tea*

11.00 Access Procedures of Peru:

*Dr. Marco A. Enciso, Official on Wildlife Research and Genetic
Resources, National Forestry and Wildlife Service (SERFOR) –
Ministry of Agriculture and Irrigation;
Mr. Roger Alberto Becerra Gallardo, Coordinator of the Regula-
tory Area of Access to Genetic Resources, National Institute of
Agricultural Innovation*

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

12.30 *LUNCH*

14.00 Access Procedures of Kenya:

*Mr. Mukonyi Kavaka Watai, National Chair ABS Committee,
Head Bioprospecting, Kenya Wildlife Service*

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

15.30 *Coffee/ Tea*

16.00 Access Procedures of Costa Rica:

Ms. Melania Muñoz García, Technical Office, National

Commission for Biodiversity Management, Ministry of Environment and Energy (MINAE), ABS National Focal Point;
Mr. José Alfredo Hernández Ugalde, Technical Office of the Ministry CONAGEBIO, Ministry of Environment and Energy (MINAE)

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

18.30 *Dinner*

20.00 Evening session:

Access Procedures of Philippines:
Ms. Theresa Tenazas, Chief Legal Unit, Biodiversity Management Bureau

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

Wednesday, 30.08.2017

07.30 *Breakfast*

09.00 Access Procedures of South Africa

Ms. Lactitia Tshitwamulomoni, Biodiversity Officer Control BABS Policy Development and Implementation, Department of Environmental Affairs, ABS National Focal Point;

Mr. Nomusa Mbuyazi, Biodiversity Officer, Department of Environmental Affairs

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

10.30 *Coffee / Tea*

11.00 Access Procedures of Australia

Mr. Ben Phillips, Director Protected Areas Policy and Planning, Australian Government Parks Australia, ABS National Focal

Point

- COUNTRY PRESENTATION (APPROX. 30 MIN.)
- QUESTIONS AND ANSWERS (APPROX. 20 MIN.)
- ACCESS PROFILE (APPROX. 20 MIN.)
- ACCESS SCENARIO DISCUSSION (APPROX. 20 MIN.)

12.30 *Lunch*

14.00 Overall discussion

- KEY ACCESS QUESTIONS AND OPTIONS FOR ADDRESSING THEM (45 MIN.)
- ACCESS FLOWCHARTS AS A TOOL FOR DESCRIBING ACCESS PROCEDURES (45 MIN.)

15.30 *Coffee / Tea*

16.00 Mexico as COP Presidency

Ms. Edda V Fernández Luiselli, Director General for the Primary Sector and Renewable Natural Resources, Underministry for Environmental Promotion and Regulation, SEMARNAT, ABS National Focal Point;

Ms. Romana Alejandra Barrios Perez, Director for Biodiversity, Biosafety and Genetic Resources, Underministry for Environmental Promotion and Regulation, SEMARNAT

- CURRENT PROCESS TOWARDS ACCESS REGULATIONS (15 MIN.)
- OPTIONS FOR INTEGRATING THE DIALOGUE RESULTS INTO THE INTERSESSIONAL PERIOD UNTIL MOP 3 UNDER MEXICAN COP / MOP PRESIDENCY (15 MIN.)

16.30 Way forward and Closure

- PUBLICATION (5 MIN.)
- FURTHER CNA COOPERATION (15 MIN.)
- VILM ABS DIALOGUE 2018 (10 MIN.)
- SCBD WAY FORWARD (10 MIN.)
- CLOSURE (10 MIN.)
-

17.30 *Reception / Dinner and Farewell*

CULTURAL GET-TOGETHER (ANY KIND OF CONTRIBUTION TO THIS EVENING, E.G. SONGS, TRADITIONAL DANCES, PRESENTING TRADITIONAL FOOD, IS GREATLY APPRECIATED). THERE IS ALSO A PIANO IN THE CONFERENCE ROOM.

Thursday, 31.08.2017

07.30 Breakfast

Ferries depart at 07.25 and 09.20 for trains at 08.00 and 10.00, with scheduled arrivals at Berlin station at 12.22 and 14.27 respectively.

The Isle of Vilm, 94 hectares in area, is a beautiful nature paradise, a Baltic Sea coast treasure. The island's natural beauty has long fascinated people. The first steps to protect its ancient forest from logging were taken back in 1812. In 1936, the Isle of Vilm was set aside as a nature reserve. Since 1990, it has been one of the core areas of the Southeast-Rügen Biosphere Reserve.

ABS scenario discussion

Case India

Parameters of the case

User	Cosmetic Company (in EU member Country)
Commercial or non commercial Intent	Commercial
Partner in Country	Trading Company (in India)
Provider in country	Farmers
IPLC involved	Yes
aTK	No
Location of access	Communal and private land/in situ

Discussion Points

- What is proposed to be accessed?
 - Fruits
 - Fruits are biological resources as defined in section 2(c) of the BD Act
- Who is proposed to access for R&D ?
 - Cosmetic Company in a EU member State - an organisation not registered or incorporated in India
 - An entity under section 3(2) (c) (1) of the BD Act
- What is the purpose of access?
 - For R&D
 - Obtaining biological resource for research by a non indian entity requires prior approval of NBA under section 3(1) of BD Act

Discussion Points

- Is it for commercial or non commercial purpose?
 - The user is required to get prior approval of NBA for both these purposes
- What is the company required to do?
 - Apply in Form 1 to NBA
 - Online submission of application (Form 1) to NBA
 - Fees Rs 10000
 - Agreement to be signed with NBA
 - May include an upfront payment also

Action at NBA

- Technical and legal examination
- Consultation with local bodies/BMCs (communities) through SBBs
- Examination through Expert Committee
- Approval by Governing Body of NBA (Rule 16)
- Draft MATs sent to applicant for signature

Obligations of the company?

- Get any other approval required under any other law (Customs clearance; In case, the BR is to be accessed from a Protected Area – approval of the concerned authorities)
- To pay upfront payment, if any, for access
- Depositing a voucher specimen with one of the designated repositories
- To submit annual report on the status of the research to NBA
- Submit a final report on completion of the research
- BR cannot be transferred to a third party without the approval of NBA
- Patents cannot be obtained without prior approval of NBA
- Results of research cannot be transferred to any third party without prior approval of NBA

Next steps

- If the company desires to commercialise the product developed, a fresh application is to be submitted to NBA for commercial utilisation of the resource

ABS Application Processing

Know the Application Form

Know Your Application Form

I am a/an

- ☒ Indian Individual(s)
- ☐ Non-Indian Individual(s)
- ☐ NRI Individual(s)
- ☐ Body corporate, association or organization incorporated or registered in India, which do not have any non-Indian participation in share capital or management
- ☐ Body corporate, association or organization incorporated or registered in India, having non-Indian participation in share capital or management
- ☐ Body corporate, association or organization not incorporated or registered in India

[Back](#) [Next](#)

Know Your Application Form

I intend to

- ☒ Transfer the results of research on biological resources occurring in or obtained from India to a person covered under [section 3\(2\)](#) of the BD Act
- ☐ Obtain Intellectual Property Rights in India or outside, on any invention based on research or information on a biological resource obtained from India
- ☐ Transfer / Carry the biological resources to a foreign country for conducting basic non-commercial research

[Back](#) [Next](#)

Know your Application

You may apply in

Form II: Application for seeking prior approval of National Biodiversity Authority for transferring the results of research to foreign nationals, companies, NRIs for commercial purposes

Fee: Rs 5,000/-

[Back](#)

Features

1. **Prompt processing:** Acknowledgment is quick
2. **Better accuracy:** Minimizes paper-work & errors
3. **Accessibility to data:** Storage & easy access to data
4. **Confidentiality:** Not accessible to anyone
5. **Convenience:** Available 24/7, online payment
6. **Proof of receipt:** Confirmation via registered e-mail id
7. **Ease of use:** Friendly -User manual, Instructions, Video tutorial, online help during office hours.
8. **Payment of Application :** SBI E-collect

Online Application Format

The screenshot displays the 'Online Application Format' web interface. At the top, there is a navigation bar with links: Home, Apply Online, Download, and Notifications. Below this is a progress bar with seven steps: Part 1, Step 1, Step 2, Step 3, Step 4, Step 5, and Step 6. The 'Part 1' section is currently active. On the left side, there is a sidebar menu with options: Form 1, Part 1, Part 2, Part 3, Part 4, and Part 5. The main content area is titled '1. Full Particulars of Applicant' and contains the following fields:

- (i) Name**
 - (a) Name of the Entity*: [Text input field]
 - (b) Type of Entity*:
 - ☐ Government Agency
 - ☐ Institution
 - ☐ Company/Industry
 - (c) Status*:
 - ☐ Not incorporated or registered in India
 - ☐ Incorporated or registered in India under any law for the time being in force which has any non-Indian participation in its share capital or management.
- (ii) Permanent Address**
 - (a) Address line1*: [Text input field]
 - (b) Address line2: [Text input field]
 - (c) Address line3: [Text input field]
 - (d) Country*: [Dropdown menu with '-Select-']
 - (e) Pin*: [Text input field]

(iv) Details of authorized representative of Entity		

Case Brazil

Access scenario discussion – Brazil

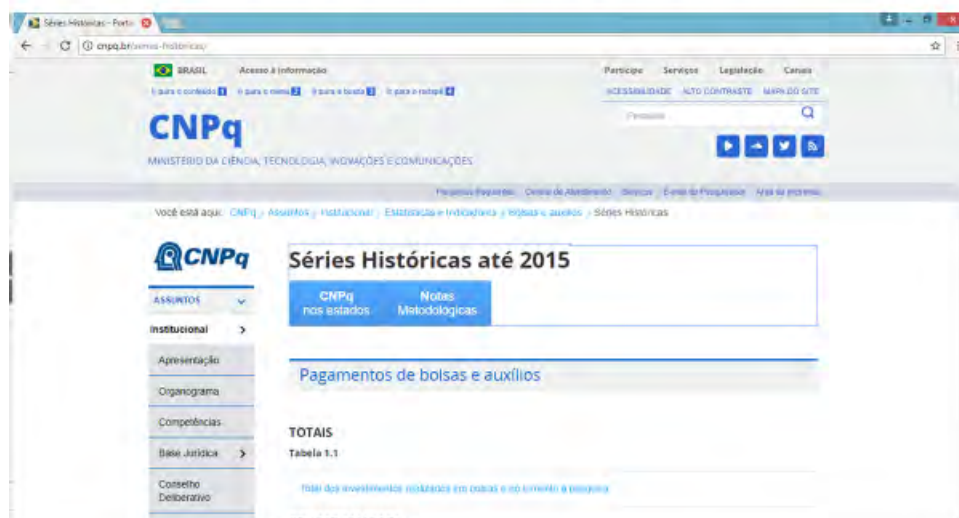

Case	Parameter of the case	
A researcher from a university in an EU member state informs the ABS authority of your country about his intentions to start a 10-year sampling project in the territorial sea of your country. The research project is on detecting climate change effects on plankton populations. Every year, plankton will be sampled and population DNA profiles be created in the laboratory of the vessel. The results will be published in international journals; the DNA sequences will be stored in a public databank.	user	EU university
	commercial or non-commercial intent	non-commercial
	partner in country	none
	provider in country	Government
	IPLCs involved	no
	aTK	no
	location of access	territorial sea / in situ

Access scenario discussion – Brazil

ACTIVITY	GENERAL PROVISIONS	EXCEPTIONS
Access (R&D) to genetic resource by foreign institution	Need of a national partner	-
Access (R&D) to genetic resource	No authorization required	When access will be carried out in areas of national security (borderlands, territorial sea, continental shelf or exclusive economic zone): Prior authorization required from the Navy through SISGEN
Publishing results	Register required prior to publication	While the register is not available, register required prior to publication shall be fulfilled within a year after the SisGen is made available to the public. In the specified case, the register will be already fulfilled, so there'll be no need for any further action.

The following link contains a table listing more than 3000 institutions that would qualify for the required association between the foreign institution and a Brazilian scientific and technological research institution: <http://cnpq.br/series-historicas/>.

One should search for the indicator 1.7.2. to access such table.

Access scenario discussion – Brazil

Concepts and Definitions

Genetic resource – genetic information from plants, animals, and microbial species, or any other species, including substances originating from the metabolism of these living organisms;

Access to genetic resource – research or technological development carried out on genetic resource samples;

Access scenario discussion – Brazil

Concepts and Definitions

Shipment – transfer of a sample of genetic resource, intended for access, to an institution located abroad, in which responsibility for the sample is transferred to the recipient institution;

Sending samples – sending samples containing genetic resource for services abroad as part of research or technological development, in which the responsibility for the sample is kept by the Brazilian user;

Access scenario discussion – Brazil

Concepts and Definitions

Shipment – transfer of a sample of genetic resource, intended for access, to an institution located abroad, in which responsibility for the sample is transferred to the recipient institution;

Sending samples – sending samples containing genetic resource for services abroad as part of research or technological development, in which the responsibility for the sample is kept by the Brazilian user;

Access scenario discussion – Brazil

Shipment x Sending of samples

	Shipment	Sending of sample
What is the purpose ?	Access to Genetic Heritage	Services abroad as part of research or technological development
Who is responsible ?	Receiver	Sender
When to register ?	Prior to shipment	Prior to Publication of research data, claim for intellectual property right, or notification
Which document(s) should follow?	Material Transfer Agreement and Confirmation of Registry	A legal document containing some special obligations

Access scenario discussion – Brazil

Shipment x Sending samples

	Material Transfer Agreement	Legal document
What is the document special content ?	<p>Receiver must comply with Brazilian ABS Law</p> <p>Specification if sample can be transferred to third parties</p> <p>Location of origin of the sample to be shipped</p>	<p>Destroy, integrally consume or return samples</p> <p>Prohibitions</p> <p>a) transfer sample or its genetic information to a third party</p> <p>b) utilize sample or its genetic information for any other purposes</p> <p>c) economically explore products or reproductive material originating from access</p> <p>d) require any form of intellectual property rights</p>

Case Peru

Case	Parameter of the case	
A cosmetic company from an EU member state informs the ABS authority of your country about its intention to start a cooperation with one of the indigenous peoples in your country. The company will undertake R&D on the plants. Its policy is to keep any research results as confidential business information and not to apply for patents.	<i>user</i>	cosmetic company
	<i>commercial or non-commercial intent</i>	commercial
	<i>partner in country</i>	indigenous people
	<i>provider in country</i>	farmers from indigenous people
	<i>IPLCs involved</i>	yes
	<i>aTK</i>	yes
	<i>location of access</i>	land of indigenous people / in situ

1. In this case, the cosmetic company will carry out R&D in Peruvian plant species, but the case does not specify if the plants are cultivated or wild species. If we define the species as wild or cultivated species, after analyzing the case we have:

- *Type of research:* Applied for commercial purposes. The company will obtain and use genetic resources and derivatives of a wild plant species.
- *Application:* Access to genetic resources of wild species.
- *Competent authorities:*

Wild species: Servicio Nacional Forestal y de Fauna Silvestre-SERFOR (*Peruvian Forestry and Wildlife Service*)

Cultivated species: Instituto Nacional de Innovación Agraria-INIA (*Peruvian Institute of Agrarian Innovation*)

- *Type of contract:* Contract for Access to Genetic Resources.

2. Partners in Peru:

- Indigenous People.
- Provider of the biological resource that contains the genetic resource: Farmers of indigenous peoples.
- Indigenous peoples and local communities (IPLCs) involved: Yes
- Associated Traditional Knowledge (aTK): Yes
- Access location: Indigenous lands, people / on-site

In this case the biological resource is located in indigenous lands, the supplier of the biological resource are people or farmers of local communities, there being traditional knowledge associated with the genetic resources or their derivatives that will be used for the elaboration

of cosmetics, which if the aTK is **registered** (at INDECOPI, according to the Law N° 27811), the cosmetic company has to request the License of Use, and pay the respective tax; or if the aTK is **not registered** the company has to request the prior consent from the farmers or local communities and establish MAT.

3. Contracts Accessories:

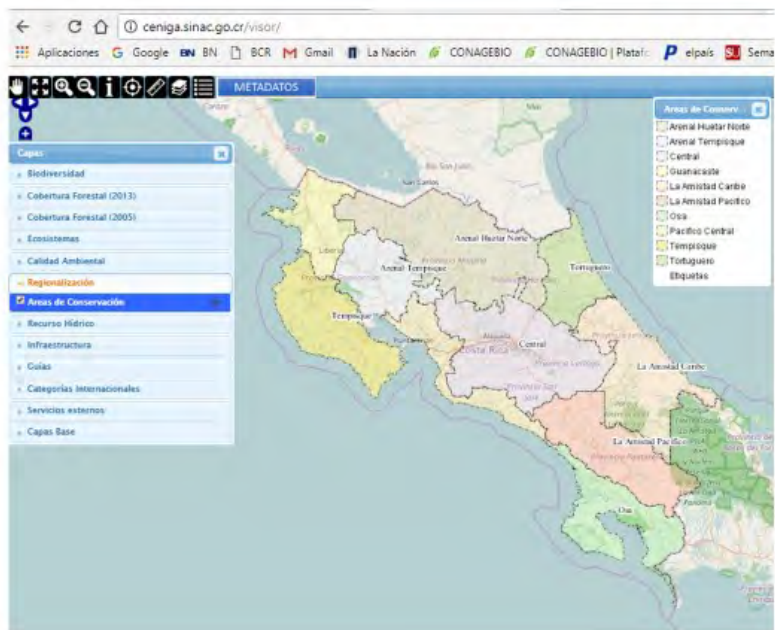

- Research Authorization, in case of **wild** species.
- PIC: Between the company and farmers or local communities.
- MAT:
 1. Between the company and farmers or local communities: If there is an economic transaction.
 2. Between the company and Peruvian government, represented by the National Competent Authority, taking into account that genetic resources are State assets (Article 6 of Decision 391-CAN). In this case the type of benefit (monetary or non-monetary) will be determined.
- Agreement or Contract with the National Support Institution (Institución Nacional de Apoyo).

Case Costa Rica

Case	Parameter of the case	
A researcher from a national health institution in an EU member state informs the ABS authority of your country about his intention to access a specific bat species. These bats are known to be a natural reservoir for a virus, which causes non-lethal fever in humans. The researchers in the EU plan to cooperate with a domestic university in systematic capturing of the bats at various places to take blood samples. The blood analyses will be undertaken in the EU member state and should be used for creating distribution maps as basis for better understanding of the dynamics of fever outbreaks and protective measures.	user	health institution
	commercial or non-commercial intent	non-commercial
	partner in country	Costa Rican university
	provider in country	Government
	IPLCs involved	no
	aTK	no
	location of access	not specified / in situ

- User:
 - EU health institution or Costa Rican University
- What kind of permit?
 - Basic research (identification and distribution maps)
 - In case the objectives change in the future, a new permit must be requested.
- Fill information in the virtual platform (corrections)
- Grant PIC (PIC and MAT)
 - Who is the provider? Location of acces must be determined in advance

Country Presentations

Viet Nam

VIETNAM'S REGULATIONS ON ACCESS AND BENEFIT SHARING

Nguyen Dang Thu Cuc (cucnguyen.bca@gmail.com)
Division for Genetic Resources and Biosafety Management
Biodiversity Conservation Agency

Vilm, Berlin - 28 August 2017

CONTENT

1. **Background Information**
 - Accession to the Nagoya Protocol
 - Legal framework
 - Institutional setting
2. **Decree 59 dated 12 May 2017 on ABS**
 - Scope
 - Access requirement
 - Step-by-step procedure (diagram)
 - Benefit sharing.

BACKGROUND INFORMATION

- Became member of the CBD
- The Law on Biodiversity issued
- Nagoya Protocol adopted in Japan in October
- Resolution 17/NQ-CP dated March 17, 2014 of the Government for accession of the Nagoya Protocol
- Ratify and became 31st member of the Nagoya Protocol

- ABS LEGAL FRAMEWORK IN VIET NAM

ABS regulation stipulated under:

❖ Law on Biodiversity (2008), specific Chapter V on conservation and sustainable use of genetic resources:

- Definition "access to GRs";
- PIC and MAT requirements;
- Key steps procedure.

❖ Decree No.59/2017/ND-CP of the Government on managing access to genetic resources and sharing benefits from their utilization

- INSTITUTIONAL SETTING

❖ 02 Competent National Authority (CNAs):

- Ministry of Agriculture and Rural Development (MARD) - Department of Science, Technology and Environment.
- Ministry of Natural Resources and Environment (MONRE) - Biodiversity Conservation Agency.

MARD	MONRE
Genetic resources of agricultural crop	All other GRs
Genetic resource of livestock breeds	
Genetic resources of aquatic species	
Genetic resources of forest seedlings	

- ❑ **National Focal Point (NFP), Publishing Authority:** Ministry of Natural Resources and Environment

DECREE 59 DATED 12 MAY 2017

- ✓ **5 Chapters, 28 provisions**
 - ✓ General provisions
 - ✓ Granting, renewal and withdrawal of access licenses
 - ✓ Sharing of benefits from utilization
 - ✓ Information and Reporting
 - ✓ Implementation and Execution provisions
(responsibilities and transitional provisions)
- ✓ **9 forms as annexes**
 - ✓ Guarantee of Science and Technology Organization
 - ✓ Application form for Access License
 - ✓ Contract template
 - ✓ License template
 - ✓ Request for renewal of the License
 - ✓ Renewal Decision
 - ✓ Withdrawal Decision
 - ✓ Request for transferring GRs abroad;
 - ✓ Decision template for transfer abroad.

- SCOPE

- ✓ All GRs for their utilization, including biochemical compounds and derivatives thereof (Art. 3.11);
 - Definition of "utilization of GRs", "biotechnology", "derivatives";
- ✓ TK not included yet, an under-Decree is being developed (Art. 26.1d);

- ACCESS REQUIREMENTS

- Individuals vs. Organizations
(eg. individuals need (kind of) certification when apply Access License from an Organization - Art. 7.2)
- National vs. Foreigners:
(eg. national entities are exempted for non-commercial research (Art. 7.1); foreigners shall provide cooperation agreement with an organization in Vietnam (Art.9.2c); national students/research institutions have simplified procedure to obtain allowance to transfer GRs abroad - 15 days (Art.20));
- Non-commercial vs Commercial purpose:
Difference in processing duration (eg. non-commercial research: 30 days since acceptance of valid documents; 90 days for case of commercial research or development of commercial products purposes - Art. 13.2);

- STEP-BY-STEP PROCEDURE

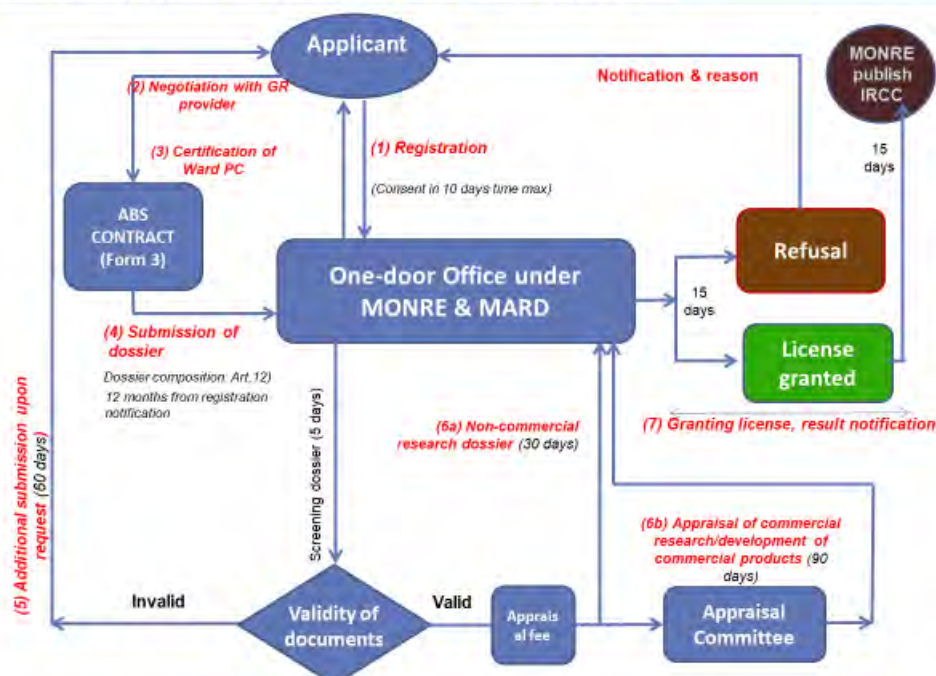

Article 8:

1. Register for access to genetic resources with the competent national authority.
2. Negotiate and sign a contract with the Provider.
3. Request the Commune-level People's Committee to certify the contract.
4. Submit the dossier requesting a license to access genetic resources to the competent national authority.
5. Provide information and additional documents; and finalize the dossier at the request of the competent national authority during the process of appraisal of the dossier requesting a license to access genetic resources.

➤ Appraisal time:

- For non-commercial research purpose: 30 days
- For commercial research or; commercial product development purposes: 90 days

DIAGRAM FOR GRANTING LICENSE TO ACCESS GRs

STEP 1. REGISTRATION

Form 2: Registration form

Form 1 (for individuals)

Registration consent: 10 days

Registration documents include:

- A registration form;
- Documents to prove identity of the applicant;
- Foreign individuals and organizations, shall provide cooperation agreements with Vietnam Science and Technology organization;
- Authorization needed in case of joint participation of different organizations.

STEP 2&3. MAT SIGNED AND CERTIFIED

Form 2: Contract form

ABS Contract to be certified by Ward People's Committee of the place where:

- + GRs are present in the wild;
- + Provider's office.

Documents to be submitted:

- Copy of registration confirmation;
- Signed contract for certification ;
- Proof of identity.

Negotiation of contracts:
max 12 months

Certification: max 03 days

STEP 4&5. SUBMISSION AND GRANTING OF ACCESS LICENSE

Review of documents
validity: 5 days

Submission of supporting documents: max 60 days

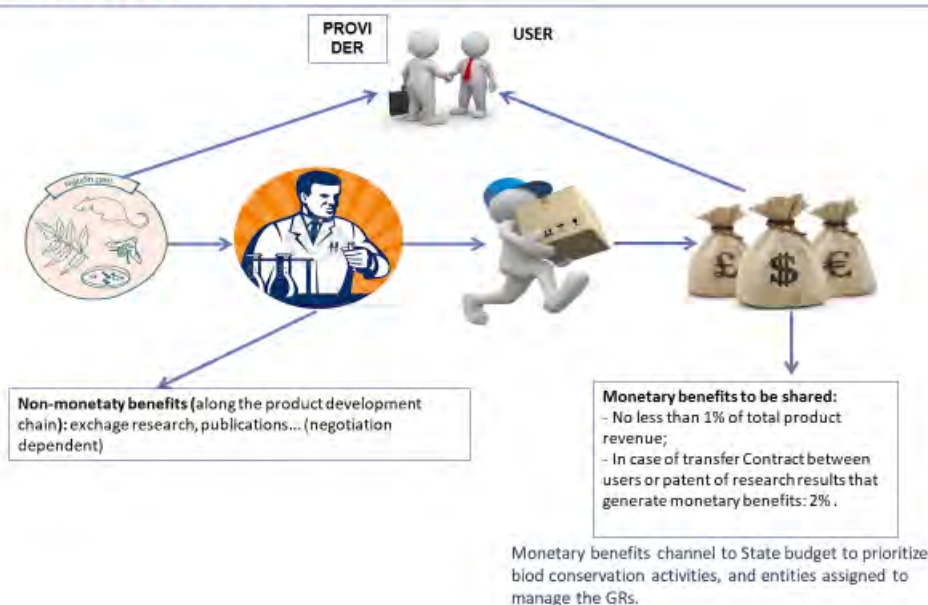

(6a) Appraisal of non-commercial dossier:
30 days

(6b) Appraisal of commercial research/development of commercial products: 90 days

Documents to be submitted:

- Copy of registration confirmation;
- Signed and certified contract;
- Written approval of sectorial management agencies in case GRs in the list of GRs limited for access and utilization;
- In case of individual applying, submit documents according to Art. 7.2.

- BENEFIT SHARING

WAY FOWARD

- Conduct capacity building activities among managerial sectors (involvement of MARD as NCA);
- Awareness raising for researchers, academic insitutes (eg. compliance cases);
- ✓ TK management system:
 - Challenges: ownership determination; ways of protection (IP law appears not to provide sufficient tools to protect TK...);
 - Would like to learn experiences from other countries: TK registry, Digital TK library (India).
- Looking for a model case on ABS (as means to measure the appropriateness of the developed policy and to propose recommendations for revision)

Thank you very much!

Thank you very much!

Ethiopian ABS legislation

Ashenafi Ayenew

Director, Genetic Resource Access and Benefit
Sharing Directorate ,
Ethiopian Biodiversity Institute
and

ABS National Focal Point

Aug. 27/ 2017

1.INTRODUCTION

- Ethiopia has ratified CBD and Nagoya Protocol in 1994 and 2012 respectively
- Ethiopia has also ratified ITPGRFA in 2003
- Globally there are two ABS Systems
- CBD/NP - bilateral approach (requiring essentially PIC and MAT)- **Bilateral ABS System**
- ITPGRFA- **Multilateral ABS System**

- The Multilateral ABS system (SMTA) applies only to PGRFA listed in Annex I
- i.e. 35 food crops and 29 forage plants.
- Countries party to both CBD/NP and ITPGRFA are **required to introduce legislative, administrative or policy measures** for access to genetic resources and benefit-sharing (ABS)

- Accordingly, Ethiopia has put in place both **institutional and legal frame works** to implement the 3rd objective of the CBD
- i.e. to **facilitate** access and **ensure** fair and equitable benefit sharing
- Ethiopian ABS system also **provides legal space** for the implementation of the ITPGRFA special approach to ABS to PGRFA (MLS/SMTA)

2. Institutional Framework

- Ethiopian Biodiversity Institute (EBI) is **Competent National Authority (CNA)** (i.e. responsible for granting access)
 - It is also the Focal Institute to the CBD and ITPGRFA
 - To effectively implement ABS issues,
 - EBI has established **GR ABS Directorate** as core process since 2010.
-
- The Directorate is mandated (authorized) to
 - **regulate GR transfer (access to GR)** and
 - **to ensure** that the country and its communities
 - get **fair and equitable share of benefits** arising from the utilization of their GRs/TK.
 - The Directorate is also the **focal point** to **Nagoya protocol / ABS**
 - **The Directorate also monitor and evaluate the implementation of ABS agreements periodically**

2. Legal Frameworks

- Ethiopia has issued Access to Genetic Resources and Community Knowledge and Community Rights (ABS Law)
- Proclamation (No.482/2006) and Regulation (169/2009).
- The legislations focus on PIC, MAT, Multilateral System of Access and how to implement relevant activities.

2.1. Access to Genetic Resources and Community Knowledge, and Community Rights Proclamation (No. 482/2006)

- Objectives (Art.3)
- To ensure that the country and its communities obtain fair and equitable share from the benefits arising out of the use of GRs/TK
- So as to promote the conservation and sustainable utilization of the country's biodiversity resources

DEFINITION OF TERMS

- “Access” means the **collection, acquisition, transfer** or **use** of genetic resources and/ or community knowledge
- “Genetic resource” means any **genetic material** of **biological resource** containing **genetic information** having actual or potential value for humanity and including its **derivatives**
- “Derivative” means **product extracted** or **developed** from biological resource such as **plant varieties, oils, resins, gums, chemicals and proteins;**
- “Community knowledge” means knowledge, practice, innovation or technologies **created** or **developed over generations** by local communities on conservation and utilization of genetic resource.

Scope of Application (Article 4)

- Art. 4(1) – Apply on access to genetic resources found in **in-situ or ex-situ** conditions and **community knowledge**
- Art. 4(2) do not apply to:-
 - a) The **customary use** and **exchange** of genetic resources and community knowledge by and among Ethiopian local communities
 - b) The **sale of produce** of biological resources for **direct consumption** that do not involve the use of the genetic resource

Ownership(art.5)

- The ownership of genetic resources shall be vested in the **state and the Ethiopian people.**
- The ownership of community knowledge shall be vested in the **concerned local community.**

Local Community Rights

- The right to **regulate** the access to their community knowledge (to **give PIC** for access to CK and to **demand restriction or withdrawal** of PIC given by EBI for access to GRs)
- The right to **use** their GRs and CK
- The right to **share** from the benefit arising out of the utilization of their GRs and CK (share **50%** from benefits obtained from GRs and share **100%** from benefits obtained from CK)

Basic Pre-Conditions of Access

- No person shall **access** GRs or CK unless in possession of written access **permit granted by EBI based on PIC** (Art. 11.1)
- No person shall **export GRs** out of Ethiopia unless in possession of **permit granted by EBI** (Art. 11.3)
- **Organs of the state** which are **empowered by law** to **conserve GRs** **may not be required** to obtain access permit from EBI, however, they shall **not transfer** GRs or CK to **third persons** or **export** out of Ethiopia unless they are **given permit** by EBI (Art. 11.4)

- Access to GRs shall be subject to the PIC of EBI (Art.12.1)
- Access to CK shall be subject to the PIC of the concerned local community (Art.12.2)
- An access applicant who is a **foreigner** should **present a letter** from
- the competent authority of **his national state** or that of his domicile **assuring** that
- they will **uphold** and **enforce** the access **obligations** (Art.12.4)
-

Conditions for denial of access permit

Access may be denied where:-

- It relates an **endangered species**.
- It may have **adverse effect** up on **human health** or **cultural values** of local community.
- It may cause undesirable impact on the **environment** and **lose of ecosystem**.
- Its purpose is contrary to national or international law.
- The applicant **violates access conditions** or **agreements**

Access procedures for non-commercial/research purpose

- The applicant must bring an official letter from his/her home organization.
 - The applicant must submit authenticated copy of his/her research proposal
 - In the official letter, the name of a person responsible for the research, scientific name of the species that is required to be taken abroad, amount of sample in grams/kilograms/packs etc., the destination Institute and country and the purpose of the research needs to be mentioned.
-
- Reason/justification why they need to export should be clearly indicated in the application
 - If the samples are collected by the researcher from field, the passport data of the samples needs to be attached and exact copies of the samples be brought to the Institute
 - Five (5) copies of the MTA signed by the researcher, and signed and stamped by the researcher's host institute need to be submitted along with the official letter

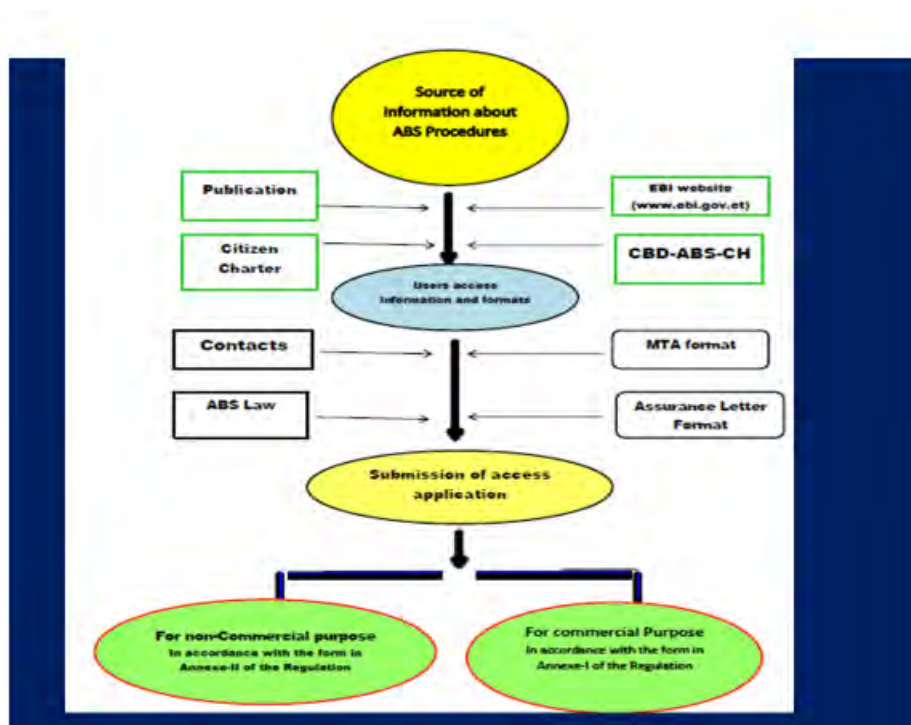

- The Material Transfer Agreement (MTA) will be made between the host organization, the researcher and EBI.
- The MTA format can be downloaded from our website (www.ebi.gov.et)
- The Institute shall not grant permit for exporting GRs out of Ethiopia unless the intended research can't be carried out here in Ethiopia (Art. 14.4)

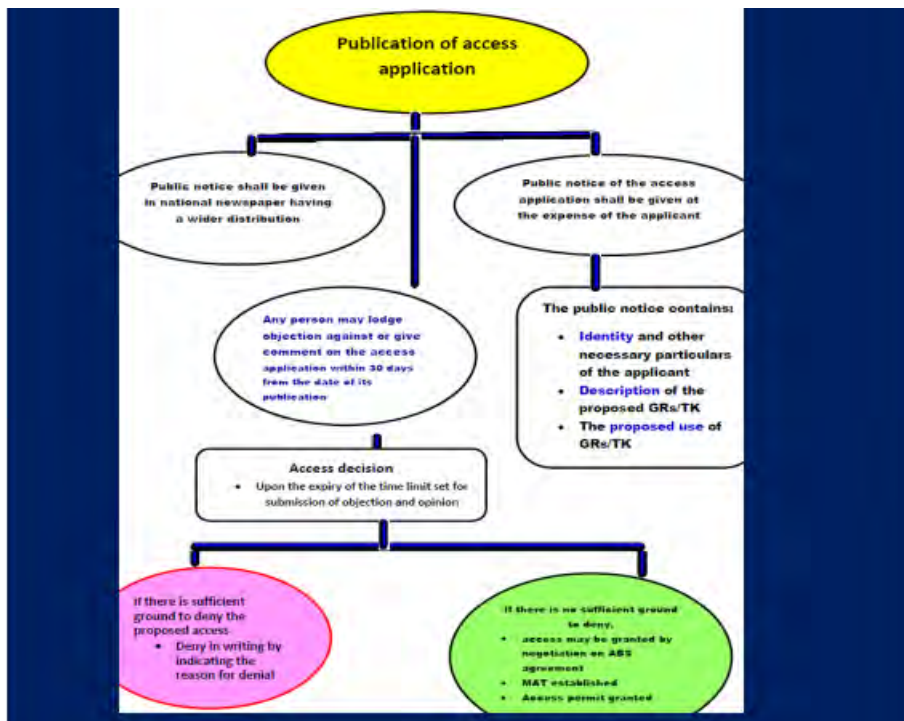

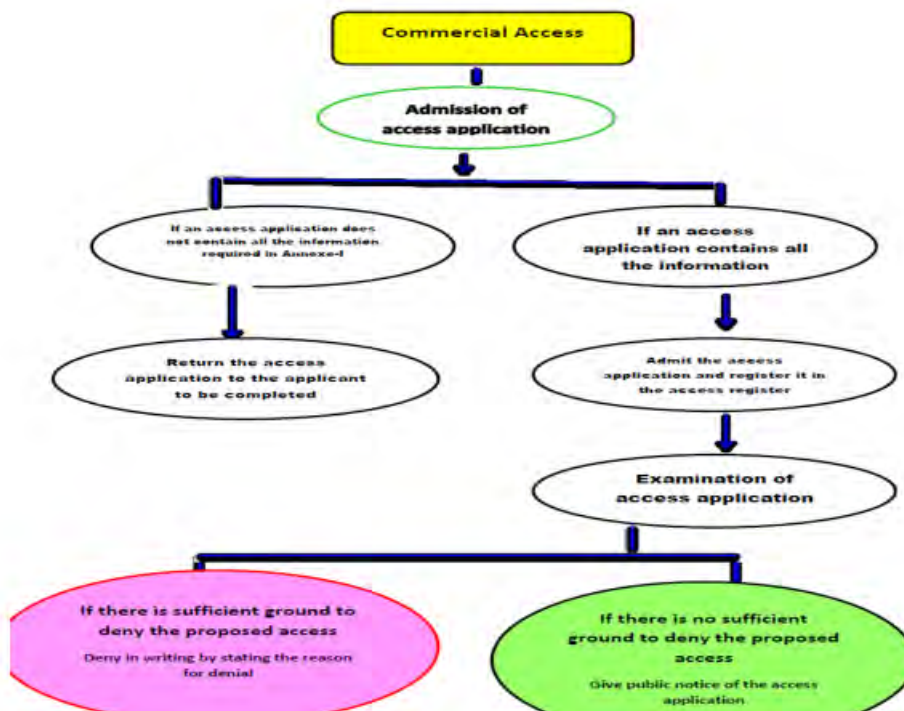

Special Access permit (Article 15)

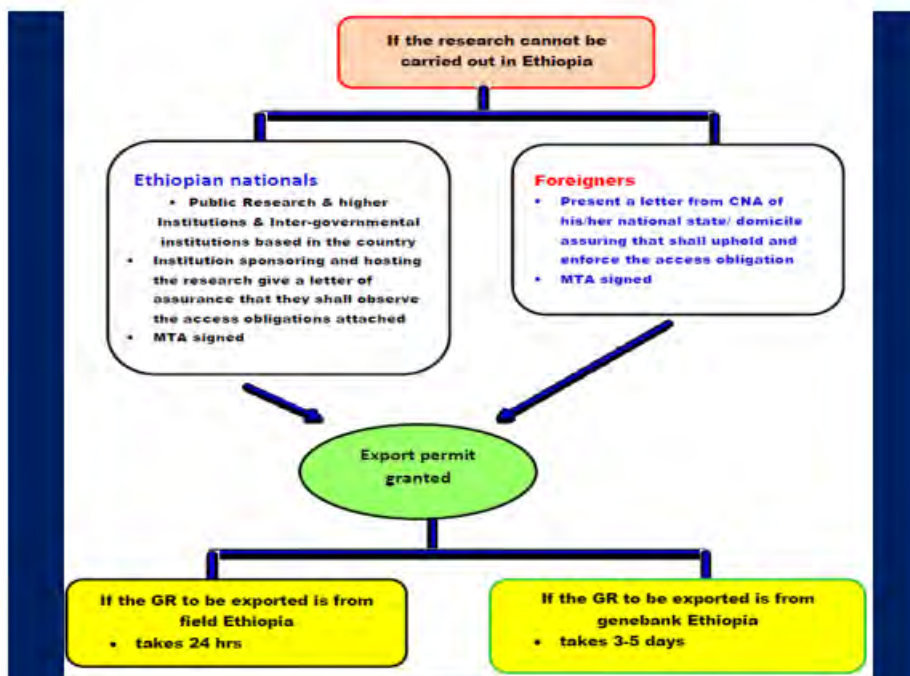

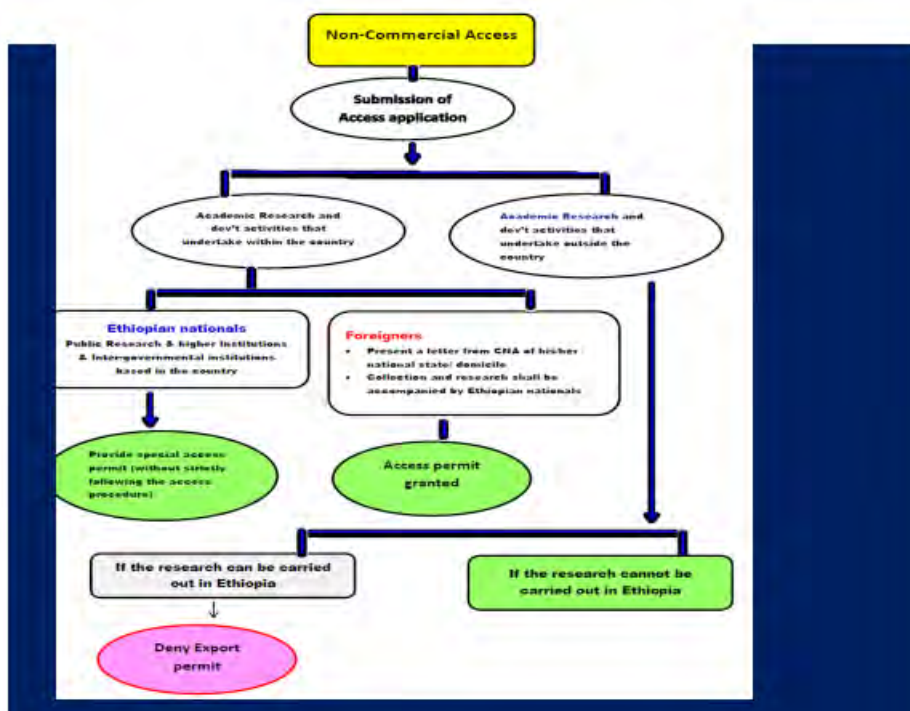

- Facilitated access / without strictly follow the access procedures grant access permit:
- Art. 15(1) – to Ethiopian national public research and higher learning institutions and intergovernmental institutions based in the country
- For purpose of development and academic research activities they under take within the country
- Art. 15(2) – an access to genetic resources under a multi lateral system is according to conditions and procedures of the multi lateral system (SMTA)

Flow chart

step-by-step procedures to
obtain PIC and establish MAT

Ethiopian – ABS case

- An ABS agreement on *Osyris* Sp. Signed between EBI (provider) and Docomo oils PLC. a USA based company (user)

- The company is establishing an industry in Ethiopia for processing
- **herbal compounds, extraction of essential oil formulation and the manufacture of other related herbal and cosmetics products**
- Duration of the agreement – 10 years
- The provider has agreed the user to harvest, collect and process essential oils of the shrub from the area stated in the agreement

- The user is permitted to use the GRs only for the purpose of developing essential oil products
- ✓ Essential oil (light, middle, heavy fractions of Osyris)
- ✓ Cosmetic compounds and cosmetics
- ✓ Perfumery and aromatic compounds
- ✓ Food and flavor ingredients and compounds

- The user agreed to utilize the GRs in a sustainable manner and not to over exploit
- The user shall **neither claim nor obtain intellectual property rights** over the GRs or any parts of the GRs
- Any **inventions** based on the GRs or parts shall be **jointly owned** by both user and provider
- The user acknowledge **declaring** Ethiopia as **geographic origin** of the GRs for the manufacture of the final products

- **The user has agreed to share the following monetary and non- monetary benefits**
 - **To pay 50,000 USD as upfront payment upon signing the agreement**
 - **To pay a lump sum equal to the amount 3.5% of the net profit after the taxes. This payment shall be made immediately after the publication of the annual account of the company**
 - **To pay annually a royalty of 3.5% of the net profit of the company**
 - **To pay annually a license fee equal to 2,000 USD**
- **The non- monetary benefits includes**
 - **To involve Ethiopian scientists in the research it will under take**
 - **To share the result of the research**
 - **To share the knowledge or technologies it may generate using GRs**

- To give training for expertise and local communities to enhance local skills in conservation, evaluation, development, propagation and use at least once in a year

❖ **Implementation status of the ABS agreement**

- The provider obtained 50,000 USD as upfront payment upon signing the agreement
- The other benefits not yet realized because it is at its initial phase

- The company is now finalizing the establishment of the industry (the processing machineries)
- The user started collection of GRs , since Sept. / 2016 as preparatory phase to start its production very soon
- 350 tons harvested from 3 districts of Southern region of Ethiopia (Benatsemay, Hammer and Maale districts)

- As result of the value chain of the ABS at initial phase creates **a job opportunity** to **857 un-employed youth** of the local community
- The youth from the local community organized in to 38 cooperatives to supply the genetic material to the company
- The cooperatives sales 1kg. for 9 ETB and **earned 8.5 million** ETB within the last 10 months

- The cooperatives now planned to invest the 8.5 million ETB generated from ABS value chain for **fattening of livestock** and engaging in the other sector of economy
- The user is training the cooperatives in sustainable harvesting methods
- The user is planning to have its own nursery to propagate
- The local administrators, having seen the economic incentive of ABS value chain agreed to provide 100 hectare nursery site/district

ABS Implementation Challenges in Ethiopia

- Ethiopia and local communities are not adequately benefiting from accessing their genetic resources.
- Due to **limited capacity** and **lack of effective enforcement** and **follow up mechanisms** on the ABS
- Lack of awareness of stakeholders at all levels
- Lack of compliance

THANK YOU!

Ethiopian ABS legislation

Melesse Maryo, PhD

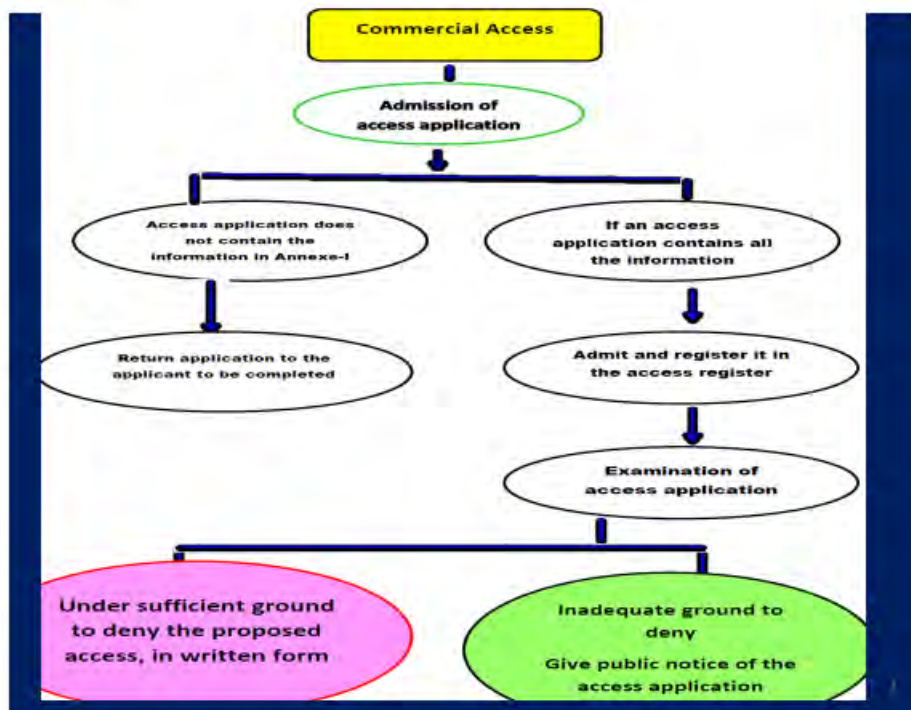

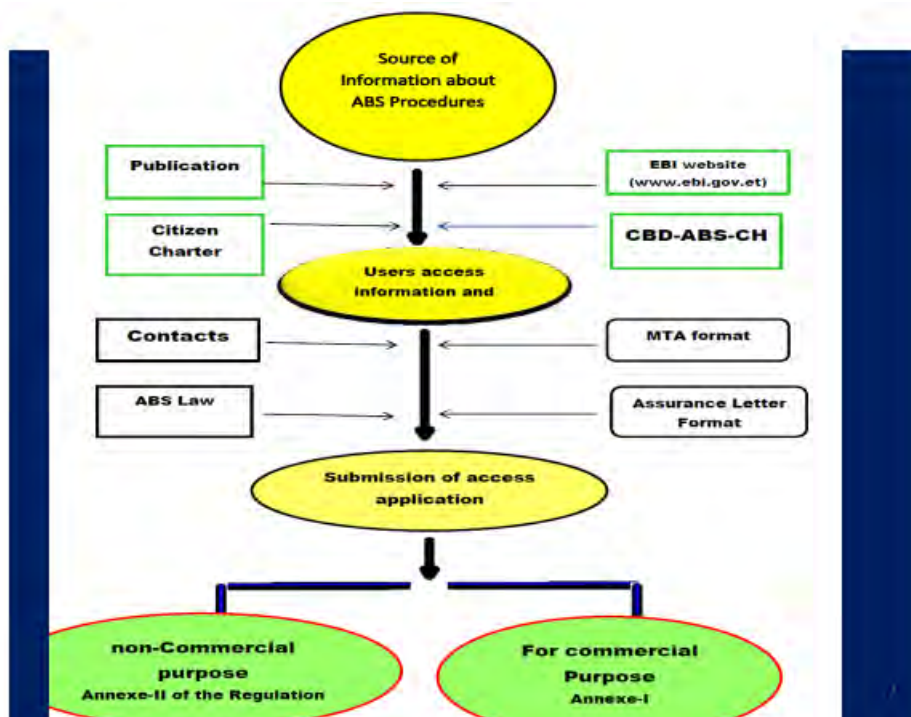

Director General

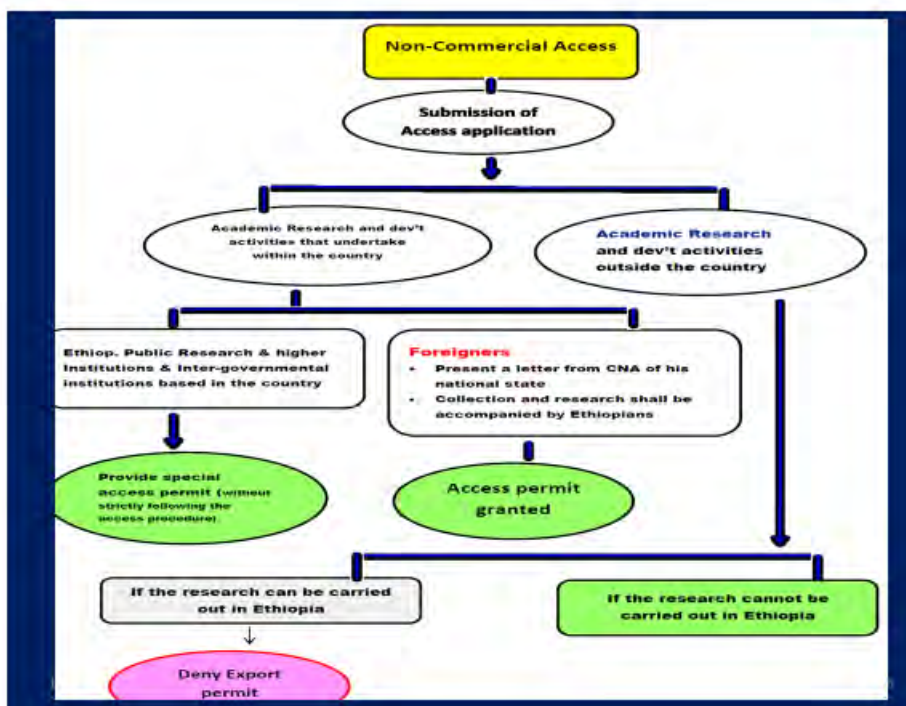

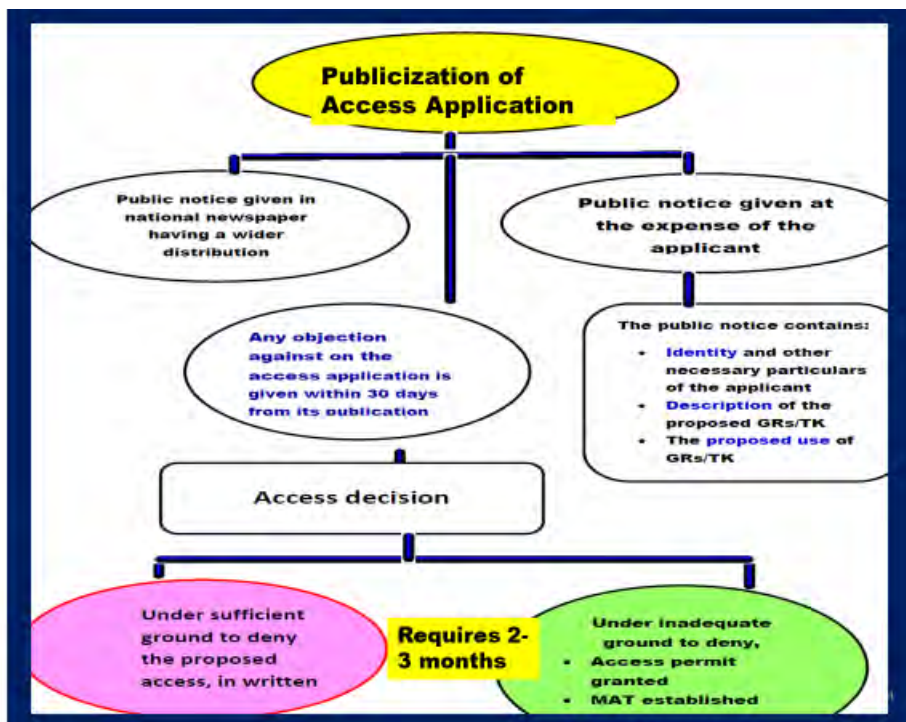

Ethiopian Biodiversity Institute

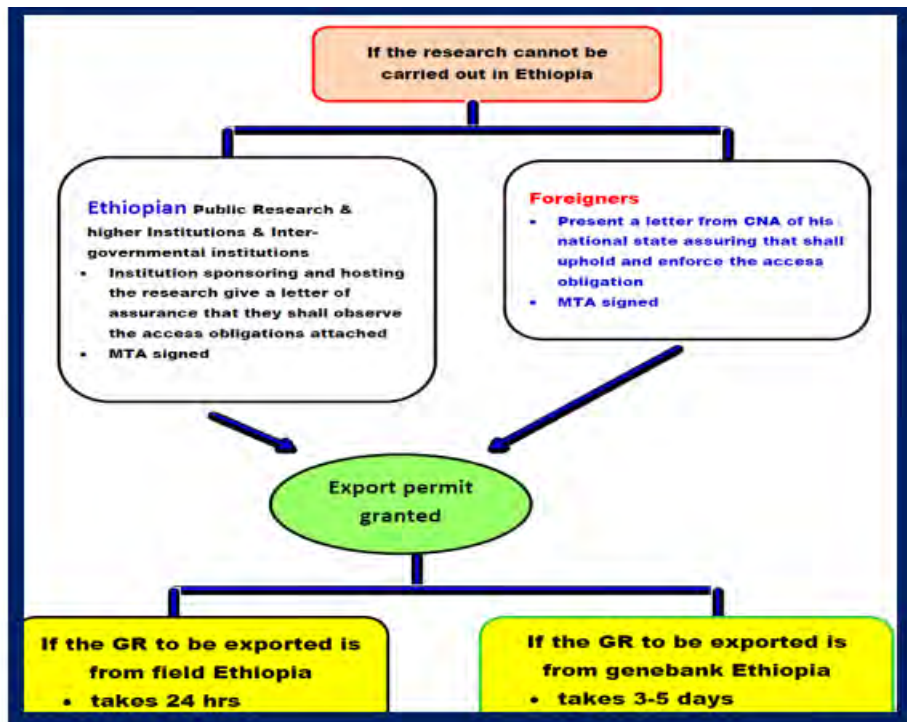

and

CBD Focal Point

Aug. 27/ 2017

Ethiopian – ABS case

The successful History

- An ABS agreement on *Osyris Sp* was signed b/n EBI and Docomo oils PLC.
- The company is establishing an **industry** in Ethiopia for processing herbal compounds, extraction of essential oil formulation and the manufacture of other related herbal and cosmetics products
- Duration of the agreement – **10 years/began 2012**
- Plant part used- **stem** (once cut it regenerates easily) 7

...contd

Users is permitted to use the GRs only for the purpose of

- developing essential oil products
- Essential oil (light, middle, heavy fractions of Osyris)
- Cosmetic compounds and cosmetics
- Perfumery and aromatic compounds
- **Food and flavor ingredients and compounds**

Agreements :

- The company uses the **GRs** sustainably
- Any **inventions** shall be jointly owned
- The user acknowledges **declaring** Ethiopia as geographic areas of the GRs for the manufacture of the final products

Agreement on monetary & non- monetary benefits

Monetary Agreement

- **Paying** 50,000 USD as upfront payment upon signing the agreement
- **Paying** a lump sum equal to the amount **3.5%** of the net profit after the taxes. This payment to be made after the **realizing** the annual account of the company
- **Paying** annually a royalty of **3.5%** of the net profit of the company
- **Paying** annually a license fee equal to **2,000 USD**

The non- monetary benefits includes

- **Involving Ethiopians in the **researches** under taken**
- **sharing the research results**
- **Sharing the **knowledge or technologies** it may generate using GRs**
- **Giving **trainings** for expertise and local communities to enhance local skills in conservation, dev't, propagation and use at least once in a year, evaluation,**

11/08/2017

10

The Implementation status of the ABS agreement

- **50,000 USD upfront payment as obtained.**
- **Initially a job opportunity to **857** un-employed youth of the local community**
- **Locally **38** organized cooperatives to supply the GRs to the company**
- **The cooperatives sales **1kg. for 9 ETB** and earned **8.5M ETB** within the last 10 months**
- **The cooperatives planned to invest on **animals fattening** and engaging in the other sector of economy**

11/10/2017

11

Implementation status contd..

- **The company is finalizing the establishment of the industry**
 - started collection of GRs since Sept. 2016 as preparatory phase to start its production very soon
- **350 tons harvested from 3 districts of Southern region of Ethiopia** (Benatsemay, Hammer and Maale districts)
 - The user is providing a training to the cooperatives on sustainable harvesting methods

11/20/2017

11

Implementation status contd..

- **The other benefits not yet realized because it is at its initial phase**
- The company is planning to have its own nursery to propagate
- The local administrators, having seen the economic incentive of ABS value chain agreed to provide **100 hectares** nursery site/district
- **EBI** is currently working collaboratively with the user
- Much benefit is expected during full implementation of the project in the future

11/20/2017

11

Monitoring and Evaluating ABS agreements

- **A group of researchers make a survey on accessed area**
- **Analyze the socioeconomic , environmental impacts of the accessed Genetic material.**
- **Deciding whether to interrupt or continue the extraction.**
- **Accordingly, there is a good status of *Osyris sp* extraction**
– **Sustainably used**

11/20/2013

18

The way forward

- **Negotiate int'l community on issuance assurance letter from CAN of Abroad countries**
- **Harmonizing the ABS Proclamation and Regulation to Nagoya Protocol**
- **Designating focal points to Indigenous Local community**
- **Intensive capacity building and Awareness Raising**

11/20/2013

19

•**Thanks a lot**

India

Implementation of ABS in India

Dr Atul Kumar Gupta

T Rabikumar

Biodiversity – the Indian context

Only 2.4% of
global land
area

7-8% of globally
recorded
species

5.6% of world
GDP (in PPP
terms)

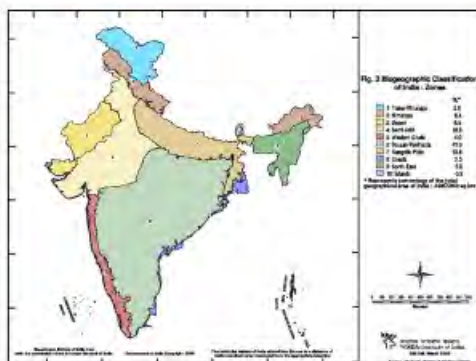

18% of world
population

India's richness of biodiversity

- Four of 34 identified hot spots of the world are in India : Eastern Himalaya, Indo-Burma, Western Ghats and Sri Lanka, Sundaland.
- India also rich in traditional knowledge (TK) associated with biological resources.
- TK both coded, as in texts of Indian systems of medicine (e.g. Ayurveda, Unani and Sidha), and non-coded, as it exists in oral undocumented traditions.

Country Profile - India

- Party to CBD
 - Signed on 5th June, 1992
 - Ratified on 12th September, 1994
- Party to NP on ABS
 - Signed on 11th May, 2011
 - Ratified on 9th October, 2012
- Ministry of Environment, Forest and Climate Change
 - National Focal Point for CBD
 - National Focal Point for NP on ABS
 - Publishing Authority for ABS-CH
- National Biodiversity Authority
 - Competent National Authority for NP on ABS
 - National Authorised User for ABS-CH

ABS Legislations in India

- Biological Diversity Act, 2002
- Biological Diversity Rules, 2004
- Guidelines on Access to Biological Resources and Associated Knowledge and Benefit Sharing regulations, 2014

Biological Diversity Act, 2002

- The **Biological Diversity Act** was enacted in **2002** on the lines of CBD;
- To implement the provisions of the BD Act, the National Biodiversity Authority was established in October 2003 at Chennai.

Objectives

1. Conservation of biodiversity
2. Sustainable use of its components
3. Fair and equitable sharing of benefits arising out of the use of biological resources

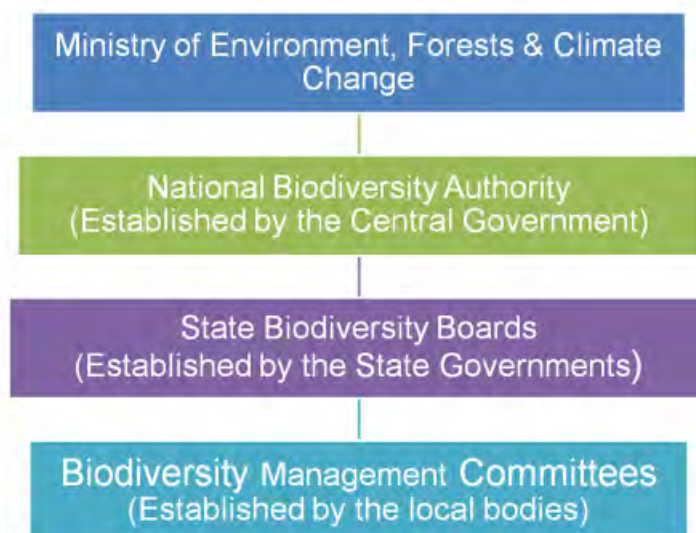

Biological Diversity Act 2002

came in to force - February 2003

- To protect **Sovereign rights** of India over its biological resources.
- To stop misuse/misappropriation of Biological Resources
- To **protect** biodiversity and TK by documenting **PBR**
- To **regulate access &** use of Biodiversity
- To ensure sustainable utilisation and **equitable benefit sharing**
- To Provide legal recognition & support to the **Biodiversity and associated traditional knowledge**

Institutional Structure for Implementing BD Ac

- 8

Composition of NBA

- Chairperson
- Ministry of Tribal Affairs
- Two Representative of MoEFCC (ADG and JS (Cons)
- Department of Agricultural Research and Education
- Department of Agricultural Cooperation and Farmers' Welfare
- Department of Biotechnology
- Ministry of AYUSH
- Department of Scientific and Industrial Research
- Department of Science and Technology
- Ministry concerned to Ocean Development (MoES)
- Five Expert Members

Functions of NBA (Section 18)

- Issue guidelines on Access and benefit sharing (ABS)
- Grant approval for access
- Advise Central/State Government on biodiversity related matters
- To oppose grant of IPR outside India on any Biological resources obtained from India, illegally.

Functions of State Biodiversity Boards

- ☐ **Advise** the State Government, subject to guidelines issued by the Central Government, on conservation of biodiversity, sustainable use of its components and equitable sharing of benefits.
- ☐ **Regulate** by granting of approvals or otherwise requests for commercial utilization or bio survey and bio utilization of any biological resource by Indians;
- ☐ **Perform** such other functions as necessary to carry out the provisions of this Act or as prescribed by the State Government.

Functions of Biodiversity Management Committee

- **Promoting conservation**, sustainable use and documentation of Biological Diversity.
- **Levy charges** by way of collection fees from person(s) accessing or collecting bioresource for commercial use from its territorial jurisdiction.
- To prepare People's Biodiversity Register (**PBR**) in consultation with local people.
- Maintain **Register** about details showing bioresource/TK accessed, fees imposed, benefits accrued and mode of sharing
- Provide **support to NBA and SBB** in their decisions.

Activities Regulated under the BD Act

Scope: Biological Resource & Associated Knowledge

Activities	Persons u/s 3 (2)	Persons other than 3(2)
Research (S. 3)	NBA	NA
Bio-survey and Bio-utilization (S. 3)	NBA	SBB
Commercial utilization (S. 3)	NBA	SBB
Intellectual Property Rights (S. 6)	NBA	NBA
Transfer of research results (S. 4)	NBA	NBA
Third party transfer of already accessed bioresources/ knowledge (S.20)	NBA	NA

Application Forms for different activities

Form	Category	Who should apply?
Form I	Access to Biological resources and associated traditional Knowledge (6 month)	Non-Indian, NRI, Foreign entity or Indian entity having non-Indian participation in share capital or management
Form II	Transferring the results of research (3 month)	Any Indian / nonIndian or entity to any non-Indian, NRI, foreign entity or Indian entity having non-Indian participation in share capital or management
Form III	Applying for Intellectual Property Rights for inventions based on any research or information on a biological resource obtained from India (3 month)	Any Indian/ non Indian or entity
Form IV	Third Party transfer of the accessed biological resources and associated traditional knowledge, (6 month)	Any person who obtained approval of NBA in Form I, to Indians / non-Indians or entities
Form-B	Conducting of non-commercial research or research for emergency purposes outside India by Indian researchers/ Government institutions (45 days)	Indian Researchers/ Government Institutions

Know Your Application Form

I am a/an

- ☐ Indian Individual(s)
- ☐ Non-Indian Individual(s)
- ☐ NRI Individual(s)
- ☐ Body corporate, association or organization incorporated or registered in India, which do not have any non-Indian participation in share capital or management
- ☐ Body corporate, association or organization incorporated or registered in India, having non-Indian participation in share capital or management
- ☐ Body corporate, association or organization not incorporated or registered in India

[Back](#)

[Next](#)

Know Your Application Form

I Intend to :

- ☐ Access biological resources and/ or associated knowledge, for research or bio-survey/ bio-utilization or commercial utilization
- ☐ Transfer the results of research on biological resources occurring in or obtained from India to a person covered under [section 3\(2\)](#) of the BD Act
- ☐ Obtain Intellectual Property Rights in India or outside, on any invention based on research or information on a biological resource obtained from India
- ☐ Transfer the biological resources and/ or associated knowledge already accessed with approval of NBA, as per section 3 of the BD Act, to a third party.

[Back](#)

Know your Application

You may apply in

Form I: Application form for access to biological resources and associated traditional knowledge

Fee: Rs 10,000/-

[Back](#)

Benefit sharing component

1. Commercial Utilization (Reg.4):

Annual Gross ex-factory sale of product	Benefit sharing component
Up to Rupees 1,00,00,000	0.1 %
Rupees 1,00,00,001 up to 3,00,00,000	0.2 %
Above Rupees 3,00,00,000	0.5 %

2. Transfer of results of research , the benefit sharing obligation is 3.0 to 5.0% of the monetary consideration. (Reg. 7)

3. Intellectual Property Rights (Reg. 9) :

If applicant himself commercialize the process/product/innovation	0.2 – 1.0% of Annual Ex-factory gross sale (minus govt. taxes)
If applicant assigns / licenses the process / product / innovation to a third party for commercialization	3.0 – 5.0 % of the fee received in any form. And 2.0 – 5.0 % of Royalty

4. Transfer of accessed bioresources and AK, the benefit sharing obligation is 2.0 to 5.0%(following sectoral approach) of any amount and / or royalty received from the transferee.(Reg. 12)

Prior approvals under BD Act, 2002

- Approvals are conveyed in the form of an agreement establishing the mutually agreed terms (MAT)
- For access – national collaboration not required
- International Collaboration Research Project are exempted from the access regulations (Section 5 of the BD Act) for research only

Exemptions under the Act (Regn.17)

Act provides exemption of certain activities from its purview :

- To local people and community for free access to use bioresources within India
- To growers and cultivators, vaidas and hakims (practitioners of traditional medicinal systems) to use bioresources
- To biological resources, normally traded as commodities notified by the Central Government under section 40 of the Act
- To collaborative research through government-sponsored institutes subject to conformity with guidelines and approval of the Central / State Governments
- For research by Indians in India

THANK YOU

Brazil

CONSERVATION

We are losing genetic diversity.

CONSERVATION

We are losing traditional knowledge.

Rosa Andrade, last female speaker of the resigaro language, Amazon, Peru

According to UNESCO:

- 100 languages have become extinct in the last 10 years;
- 400 languages are critically endangered;
- 51 languages are spoken by only 1 person;
- 3.500 languages/dialects will become extinct by the end of this century.

Tommy George, last of the Kuku-thaypan, Australia

Fonte: https://brasil.elpais.com/brasil/2016/12/26/cultura/1482746256_157587.html

BRAZIL AS PROVIDER AND USER OF BIODIVERSITY

Around 22% of world's biodiversity

Brazilian agriculture is a major user of exotic biodiversity

Consumers are attaching increasing importance to socially and environmentally friendly practices

More than 300 indigenous ethnic groups and more than 40 other types of local communities

Significant number of research institutions

Brazilian cosmetic, pharmaceutical and biofuel industries are heavy users of national biodiversity

CBD and domestic legislation

- Brazil ratified CBD in 1994.
- Legislation on ABS was adopted in 2000.
- Brazil signed NP in 2011. Still in National Congress.
- New domestic law on ABS was adopted in 2015 – Law 13,123/2015 and Decree 8,772/2016.

MAIN OBJECTIVES OF THE NEW ABS LEGISLATION

Legal certainty;

Low transaction costs;

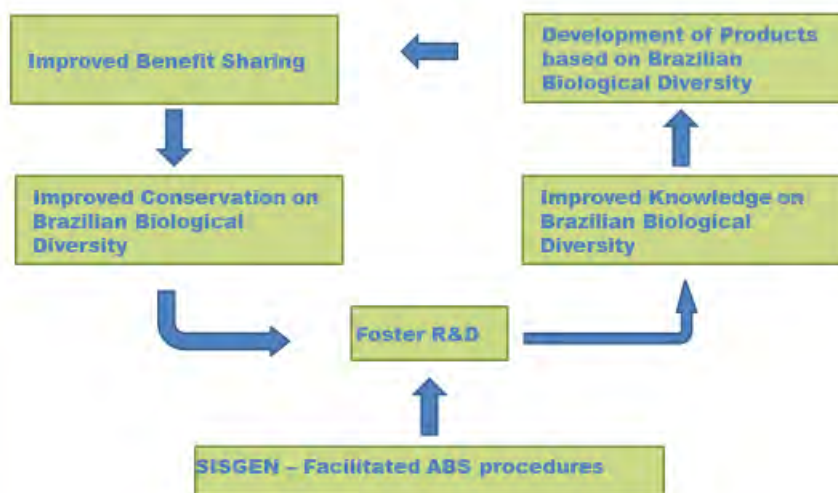

Benefits channeled to conservation;

Assure Fair and equitable sharing of benefits;

Promoting Access to GR and TK and foster innovation;

R&D AND BENEFIT-SHARING ARE MUTUALLY REINFORCING

The only way to facilitate access

Access facilitation and benefit-sharing obligations shall be treated as parts of a single undertaking and shall not be agreed upon separately.

The only way to facilitate access

- **Assured benefit-sharing in the future is the guarantee of access/utilization facilitation at present.**
- **This approach is essential to foster trust among the parties which may be key to a functional ABS system.**

ABS System: Law 13,123 and Decree 8,772

- Genetic Resource Management Council (CGen): CNA
- Benefit-Sharing National Fund (FNRB): insurance for users and TK holders
- Benefit-Sharing National Programme (PNRB): guidelines for the use of FNRB funds
- Electronic System of GR and TK (SisGen): single window

ABS System: Law 13,123 and Decree 8.772

- Compliance authorities (IBAMA, in some cases with the Ministry of Agriculture or the Navy)
- Checkpoints: SisGen, ANVISA, Patent Office (INPI), Cultivar National Authority (RNC)
- Traceability System: CNPq, CTNBio, SISCOMEX, INPI, ANVISA, RFB, SNIIC and other databases.

CGen

- **Competent National Authority on ABS**
- **Normative, advisory and appellate Council**
- **Composition: federal government (60%) and society (business sector, academic sector, indigenous peoples, traditional communities and traditional farmers) (40%)**
- **Public debates and consultations**

EMPOWERS INDIGENOUS AND LOCAL COMMUNITIES

- **Formal and Mandatory Prior Informed Consent**
- **Community Protocols formally recognized, valued, and its uses are promoted and disseminated**
- **Power to decide how to apply FNRB resources**
- **Establishes the National Benefit Sharing Program to support efforts, demands and public policies for ILCs**
- **Assured participation as members of CGEN and its Sectorial Chambers, with voting and speaking rights**

PIC and MAT on GR and TK access

- No PIC no MAT for GR access. Administrative Verification Process after registration, Traceability System and other measures to guarantee benefit-sharing
- PIC and MAT for TK access. Privately negotiated by provider and user. General framework, but no direct state interference. FNRB provides legal certainty and insurance

Evidence of PIC for TK access

- At the discretion of the indigenous population, traditional community or traditional farmer.
- Signed prior consent; registered audiovisual consent; statement from the official governing body; or adherence to the provisions set forth by community protocol.

Facilitating Access and Utilization

- Focus on two different approaches (food and agriculture; or other activities) based on the type of use to establish the rules, other than the type of GR.
- The benefit-sharing mechanism should be simple and objective, transparent, measurable and with clearly defined triggering event.

Guaranteeing the share of benefits

- Developing benefit-sharing tracking and enforcement tools based on fiscal and accounting principles and rules.
- The use of GR includes the use of digital sequence information, even if obtained from in silico databases.

Opportunities for R, D & I

- Facilitated access system, simplified registration
- Extra budgetary resources for R&D&I (non-monetary benefit-sharing, FNRB, partnerships with the private sector, *ex situ* collections)
- Specific resources for creating and maintaining collections
- The entire innovation chain is free of bureaucracy and costs
- Regularization by registration, with pardon of fines

Reduction of Regulatory Costs

ABS Permits granted by CGen 2003-2015

Benefit-Sharing Agreements approved by CGen 2002-2015

Benefit-Sharing Agreements approved by CGen 2002-2015 (estimated values)

P.A. nº 2186-16/2001	Law nº 13.123/2015

The Nagoya Protocol on Access and Benefit-sharing was **Ratified** by Peruvian Government in July 5, 2014, by Supreme Decree N° 029-2014-RE

NORMAS LEGALES

El Peruano
Sábado 5 de julio de 2014

RELACIONES EXTERIORES

Ratifican el "Protocolo de Nagoya sobre Acceso a los Recursos Genéticos y Participación Justa y Equitativa en los Beneficios que se deriven de su utilización al Convenio sobre la Diversidad Biológica"

DECRETO SUPREMO
N° 029-2014-RE

EL PRESIDENTE DE LA REPUBLICA

CONSIDERANDO:

Que, el "Protocolo de Nagoya sobre Acceso a los Recursos Genéticos y Participación Justa y Equitativa en los Beneficios que se deriven de su utilización al Convenio sobre la Diversidad Biológica" fue adoptado el 29 de octubre de 2010, en la ciudad de Nagoya, Japón, firmado por la República del Perú el 04 de mayo de 2011, y aprobado por Resolución Legislativa N° 30217 del 03 de julio de 2014;

Que, es conveniente a los intereses del Perú la ratificación del citado instrumento jurídico internacional;

De conformidad con lo dispuesto por los artículos 56° y 118° inciso 11 de la Constitución Política del Perú y el artículo 2 de la Ley N° 28647;

DECRETA:

Artículo 1°.- Ratificase el "Protocolo de Nagoya sobre Acceso a los Recursos Genéticos y Participación Justa y Equitativa en los Beneficios que se deriven de su utilización al Convenio sobre la Diversidad Biológica", adoptado el 29 de octubre de 2010, en la ciudad de Nagoya, Japón, firmado por la República del Perú el 04 de mayo de 2011, y aprobado por Resolución Legislativa N° 30217 del 03 de julio de 2014.

Artículo 2°.- De conformidad con los artículos 4° y 5° de la Ley N° 28647, el Ministerio de Relaciones Exteriores procederá a publicar en el diario oficial "El Peruano" el texto íntegro del Acuerdo, así como la fecha de entrada en vigencia.

Artículo 3°.- El presente Decreto Supremo será refrendado por el Ministro de Relaciones Exteriores.

Dado en la casa de Gobierno, en Lima, a los cuatro días del mes de julio del año dos mil catorce.

OLLANTA HUMALA TASSO
Presidente Constitucional de la República

MAGALI SILVA VELARDE-ÁLVAREZ

July 02, 1996. Andean Nations Community (CAN):
Decision N° 391, Establishing the Common Regime on Access to Genetic Resources

COMUNIDAD ANDINA

Sexagesimotercer Período Ordinario
de Sesiones de la Comisión
02 de julio de 1996
Caracas - Venezuela

DECISION 391

Régimen Común sobre Acceso
a los Recursos Genéticos

LA COMISION DEL ACUERDO DE CARTAGENA.

VISTAS: La Tercera Disposición Transitoria de la Decisión 345 de la Comisión y la Propuesta 284/Rev. 1 de la Junta;

CONSIDERANDO:

Que los Países Miembros son soberanos en el uso y aprovechamiento de sus recursos, principio que ha sido ratificado además por el Convenio sobre Diversidad Biológica suscrito en Río de Janeiro en junio de 1992 y refrendado por los cinco Países Miembros;

Que los Países Miembros cuentan con un importante patrimonio biológico y genético que debe preservarse y utilizarse de manera sostenible;

Legal Framework

SERFOR

February 06, 2009. Peruvian Government launch the Supreme Decree N° 003-2009-MINAM, Regulation for the Access to genetic resources

REGLAMENTO DE ACCESO A RECURSOS GENÉTICOS

TÍTULO I DEL OBJETIVO

Artículo 1. - Objetivo.

El presente Reglamento tiene por objeto desarrollar y precisar las disposiciones contenidas en la Decisión N° 391 del Acuerdo de Cartagena que aprueba el Régimen Común de Acceso a los Recursos Genéticos, y de acuerdo a lo expresado en su Título II, del Objeto y Fines, con el fin de:

- Prever condiciones para una participación justa y equitativa en los beneficios derivados del acceso;
- Sancionar las tasas para el reconocimiento y utilización de los recursos genéticos y

Decreto Supremo N° 003-2009-MINAM

EL PRESIDENTE DE LA REPÚBLICA

CONSIDERANDO:

Que, de acuerdo con el Decreto Legislativo N° 1121, Ley de Creación, Organización, Funciones del Ministerio del Ambiente - MINAM, en su calidad de ente rector, el MINAM es la autoridad normativa en materia de biodiversidad y por tanto de acceso a los recursos genéticos; que la Ley ordena y establece la gestión del acceso a los recursos genéticos, garantizando la futura de estos los recursos y conocimientos para la gestión del acceso a los recursos genéticos;

Que, siendo el Ministerio del Ambiente el ente rector en materia de Recursos Genéticos, es necesario incorporar la participación de otros sectores (salud, la biodiversidad, la agricultura, etc.) en la gestión genética incorporando, como parte de la actividad responsable de la ejecución del Reglamento de Acceso a Recursos Genéticos, el artículo 119 de la Ley N° 29571-MINAM;

Que, de acuerdo a lo previsto en el numeral 3 del artículo 117 de la Ley N° 29571, Ley Orgánica del Poder Ejecutivo, los Decretos Supremos son normas de carácter general que regulan materias no sometidas a ley o regulan la actividad económica, funcional o administrativa, funcional, social, nacional y son emitidos por el Presidente de la República o delegados por este a otros Ministros o directores de organismos autónomos;

De conformidad con el inciso II del Artículo 119 de la Constitución Política del Perú;

DECRETA:

Artículo 1°.- Objeto.

El presente Decreto Supremo aprueba el Reglamento de Acceso a Recursos Genéticos y establece la gestión del acceso a los recursos genéticos y conocimientos para la gestión del acceso a los recursos genéticos.

CONTRATO N° 2015-SERFOR-000

Conste por el presente documento el Contrato para el acceso a Recursos Genéticos sin fines comerciales, en adelante el CONTRATO, que celebran, de una parte el **SERVICIO NACIONAL FORESTAL Y DE FAUNA SILVESTRE - SERFOR**, con domicilio legal en Calle Dieciséis 355 Urb. El Palomar - Distrito de San Isidro, provincia y departamento de Lima, con RUC N° 20562336927, debidamente representada por su Directora de la Dirección de Identificada con DNI N° _____, SERFOR, quien obra según facultades otorgadas en los literales _____ del artículo _____ del Reglamento de Organización y Funciones del SERFOR, aprobado por el Decreto Supremo N° 007-2013-MINAGRI modificado por Decreto Supremo N° 016-2014-MINAGRI, en adelante el **PROVEEDOR**, y de otra parte, _____, identificado con N° _____, en adelante **EL SOLICITANTE**, de acuerdo al Anexo 2, con domicilio legal en _____ Distrito de _____ provincia y departamento de _____ en los términos y condiciones de las cláusulas siguientes:

CLÁUSULA PRIMERA: ANTECEDENTES

Mediante solicitud de fecha _____ **EL SOLICITANTE**, petitionó ante **EL PROVEEDOR** la suscripción de un Contrato para el acceso a Recursos Genéticos de flora y/o fauna silvestre, que le permita realizar el proyecto de investigación científica en fines comerciales, denominado: _____

Con Resolución de N° _____ de fecha _____ emitida por la _____, **EL PROVEEDOR** comunicó a **EL SOLICITANTE** la aprobación de su solicitud y suscripción del contrato para el acceso a los recursos genéticos correspondiente.

CLÁUSULA SEGUNDA: DE LAS PARTES

2.1. EL SOLICITANTE
EL SOLICITANTE es una persona natural/jurídica (especificar según sea el caso), dedicada a la investigación científica de _____, asimismo, declara no tener impedimentos para contratar en capacidad de asumir obligaciones y que se ha presentado de manera libre y espontánea por lo que se obliga de manera válida, vinculante y regible conforme a los términos y cláusulas de este CONTRATO. Asimismo declara que la información que ha brindado a **EL PROVEEDOR** es veraz.

Kenya

The Concept of ABS

- Key element for biodiversity sustainable utilization through contribution in Equity, Economy and Environmental quality
- Biodiversity been identified as key natural Capital principle asset-base for development , growth and sustainable development at global level
- Proceeds from R&D on biological resources estimated at USD 900 billion annually while 300 billion from tourism landscapes
- financial sector loss USD 1-1.5 trillion whereas loss of biodiversity estimated at USD 2-5 trillion per year globally

Drivers of biodiversity loss

- Estimated 30% of species loss 2050 globally noting that quite little %of species is supporting human life
- Inadequate or no incentives –Baba dioum –you conserve what you love, you love what you understand and understand what you are taught
- Weak or ineffective laws, policies and institutional arrangements
- Key sectors where activities of biodiversity loss take place such as agriculture, fisheries ,mining ,infrastructure etc are not targeted
- Lack of adequate information for policy and legislative development

Nagoya ABS : Biodiversity conservation and livelihoods

Pre-Nagoya challenges

- **Most of the ABS laws were developed before Nagoya Protocol and were more protective and restrictive**
- **Lack of coordination ,overlaps ,no clear institutional arrangements with clear functions as defined under Nagoya**
- **Most are not effective and lack legal clarity and certainty**

Creation of enabling environment to promote business under Nagoya Protocol;

- Article 6 (1) –Article 15 of the CBD
- Article 6 (3) establishment of domestic measures measures for legal, policy and institution arrangements, for (a) legal clarity, certainty and transparency (e) evidence of Access permit for PIC and establishment of MAT and Notify ABS-CH (f and g) establish rules procedures criteria for PIC and MAT with where possible involving local communities subject to domestic legislation. Article 14 (c) access permits issued as evidence for PIC and establishment of MAT to be submitted to ABS-CH. Article 17 (2) permit issued as per article 6 (3e) shall constitute IRCC and manner of IRCC guided in 17 (4).
- Special consideration for supportive manner with other Conventions –article 4 eg ITPGRFA –SMTA ,article 8 non commercial research and pathogens under WHO.

Contin”

- Key provisions under CBD ,*article 1* objective, conservation, sustainability, equitable benefits on utilization of genetic resources, use of terms ,*article 2* ,biological, genetic resources, country of origin ,biotechnology
- CBD article 15 on access to genetic resource (ABS permits) -15 (1),sovereignty ,15 (2) incentives –facilitated access,15 (3) provider as country of origin –in-situ or accordance with CBD acquisition of PIC and MAT. Article 15 (4) Access subject to MAT and 15 (5) subject to PIC, 15 (7) each party to take **legislative ,administrative** or policy measures

Continuation

- Use of terms

- (c) “Utilization of genetic resources” means to conduct research and development on the genetic and/or biochemical composition of genetic resources, including through the application of biotechnology as defined in Article 2 of the Convention;

- (d) “Biotechnology” as defined in Article 2 of the Convention means any technological application that uses biological systems, living organisms, or derivatives thereof, to make or modify products or processes for specific use;

- e) “Derivative” means a naturally occurring biochemical compound resulting from the genetic expression or metabolism of biological or genetic sources, even if it does not contain functional units of heredity

- Scope article 3; within CBD article 15 and include aTK and benefit sharing.

Guidance through the ABS -CH

Kenya's biodiversity

- Kenya is found in East Africa ,borders Somalia,Ethiopia,Tanzania ,Uganda and South Sudan
- Listed as among the 15 mega biodiversity rich countries
- Rich in wide range of biological diversity both wild and agriculture in varied ecosystems
- Include vast ex-situ collections both at National and foreign genebanks

Contribution to economy

- Key sectors of the Economy utilizing biodiversity include ; Agricultural sector, Tourism sector , Energy sector ,Fisheries sector ,Forestry sector , Health sector , Trade and Industry
- The agriculture sector contributes over 24 % of country's GDP, contributes 65% of export earnings
- Tourism sector contributes 10 percent of the GDP
- Energy sector inform of biomass energy contributes 68% of Kenya's rural population
- The sector contributes in excess of KSh 20 billion worth of goods to the economy annually and employs over 50,000 people directly and another 300,000 indirectly
- Health sector for various purposes including traditional medicine and traditional knowledge
- Fisheries contribute 5% of GDP
- Trade-both biotrade and gentrade.
- Other Ecosystem services include clean air, nutrients cycling ,pollination ,pollution management ,rains ,hydro thermal energy among others.

Kenya's Biodiversity in Genetrade and Biotrade (wild)

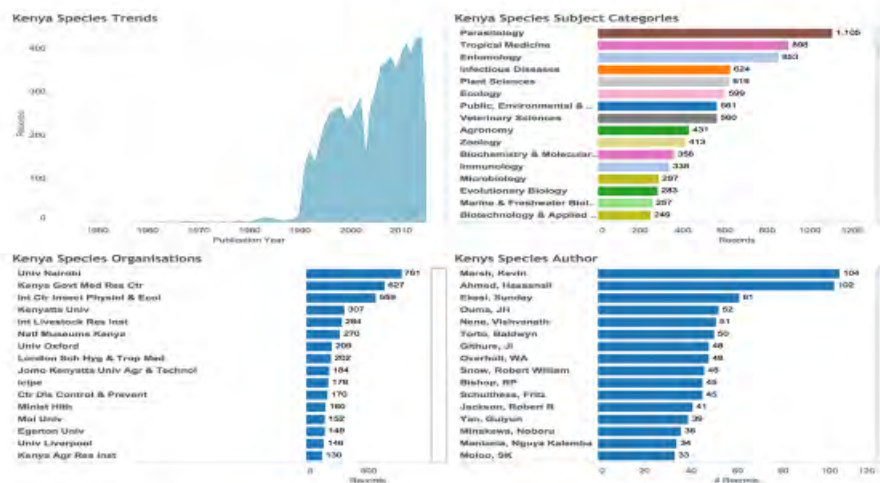

Various studies including
Commissioned by GIZ_ABS
initiative shows Kenya has vast
potential

- 3000 species cited from
180,000 patent documents
,29 species critical
- Large number of R&D on
kenyan-majority German,USA
and UK
- Companies –Germany ,UK,USA

- National Museums of Kenya (NMK)
- Kenya Medical Research Institute (KEMRI)
- Indigenous Information Network (IIN)

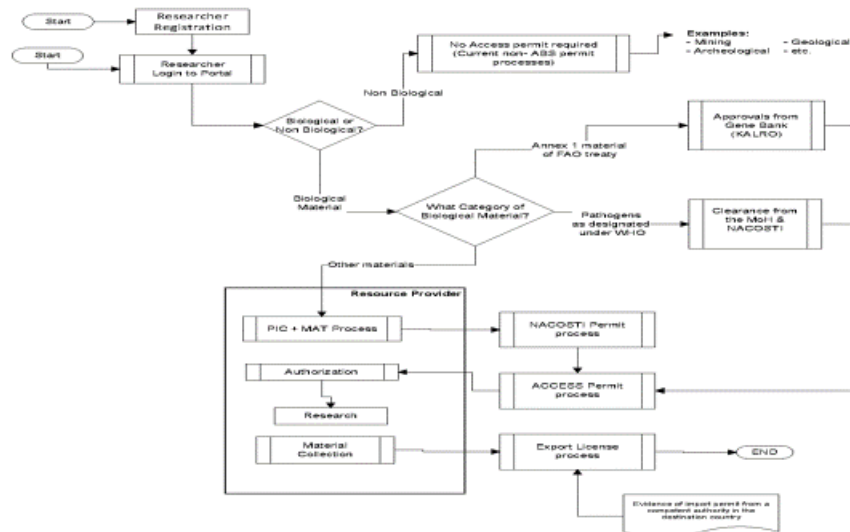

Permitting Requirements for Access to Kenya Biological Resources

Introduction:

1. What qualifies for an Access permit:

- Biological resources
- Genetic Resources
- DNA / RNA extracts
- Bio Chemical resources
- Derivatives
- Progeny
- Traditional Knowledge
- Associated information (E.g. access to DNA sequencing)

2. This is applicable to both imports to Kenya and exports from Kenya

Permits granted

Since 2009 -71 application-granted all non commercial ,few compliance and enforcement cases

ITGRFA –SMTA- 3,189 accessions out of 50,000 conserved been distributed in the last 5years

Status of GMO

	LAB/GREEN HOUSE TRIALS	CONFINED FIELD TRIALS (CFT)	ENVIRONM ENTAL RELEASE	IMPORTS AND TRANSIT OF GM PDTS
APPROVED	24	14	2	28
PENDING	2	0	1	0

Access to Genetic and Biochemical Resources

- Competent National Authority. Mrs Angela González Grau (CONAGEBIO)
- ABS Focal Point . Mrs Melania Muñoz García.
- 8J Focal Point. Mrs Alejandra Loría Martínez.
- Costa Rica signs the Nagoya Protocol in 2011, but hasn't ratified yet...
- The Biodiversity Law and its decrees contain the main elements
- Prior Informed Consent and Mutually Agreed Terms between supplier and user

Types of permits

Basic Research

Activity to investigate, examine, classify or increase existing knowledge over biological elements in general or their genetic or biochemical characteristics in particular, without immediate interest in commercializing its results.

Bioprospection

The systematic search, classification and research for commercial purposes of new sources of chemical compounds, genes, proteins, and micro-organisms, with real or potential economic value, which are found in biodiversity.

Commercial use

Occasional or constant use of the biochemical or genetic elements and resources of biodiversity for commercial purposes, without necessarily being preceded by a basic research or bioprospection program as part of the application.

Types of permits

Basic Research

Activity to investigate, examine, classify or increase existing knowledge over biological elements in general or their genetic or biochemical characteristics in particular, without immediate interest in commercializing its results.

Bioprospection

The systematic search, classification and research for commercial purposes of new sources of chemical compounds, genes, proteins, and micro-organisms, with real or potential economic value, which are found in biodiversity.

Commercial use

Occasional or constant use of the biochemical or genetic elements and resources of biodiversity for commercial purposes, without necessarily being preceded by a basic research or bioprospection program as part of the application.

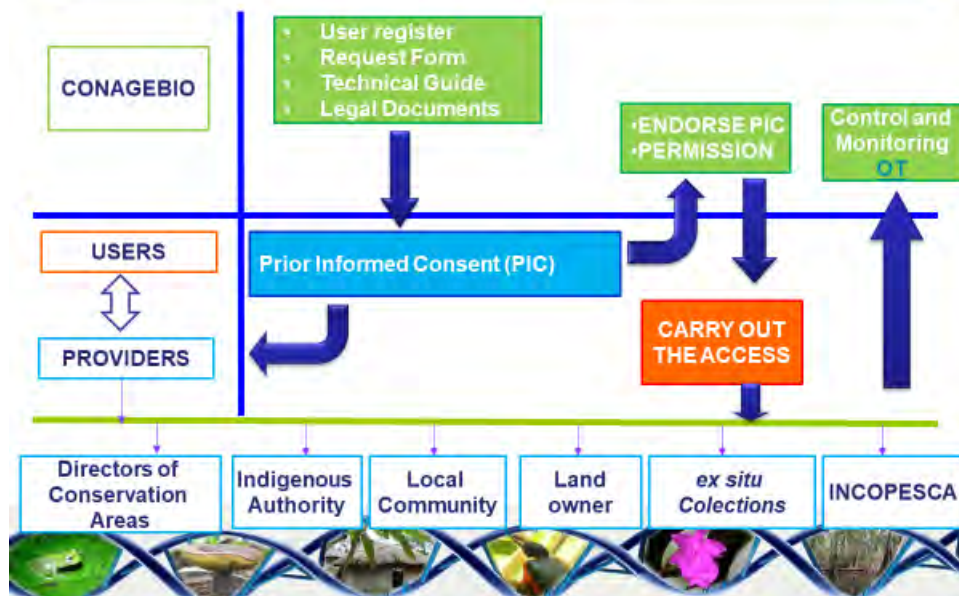

Permission to access genetic and biochemical resources in indigenous territories and traditional knowledge

Art. 83. Participatory process to determine the nature and scope of sui generis community intellectual rights

Flow chart to grant access permissions

For *ex situ* Access

- PIC with the collection's manager.
- PIC with the original provider (collection after April-2007)
- Collecting permissions of the samples

For commercial use

Besides what is pointed before, the user must include:

- Description of the commercial use of the genetic and biochemical elements or resources of biodiversity pretended to be extracted or the traditional knowledge associated.
- General information about the project's economic feasibility.

Control and monitoring

Participatory process for the protection of traditional knowledge associated to biodiversity

Art. 83. Participatory process to determine the nature and scope of sui generis community intellectual rights

- Actions of the Technical Office
- Development of the first stage of a draft norm concerning sui generis community intellectual rights for Indigenous communities (2009-2010)
- Legal bases on the nature and scope of the community rights of indigenous communities, based on the Biodiversity Law, the Convention on Biological Diversity, ILO Convention 169 and the United Nations Declaration on the Rights of Indigenous Peoples.

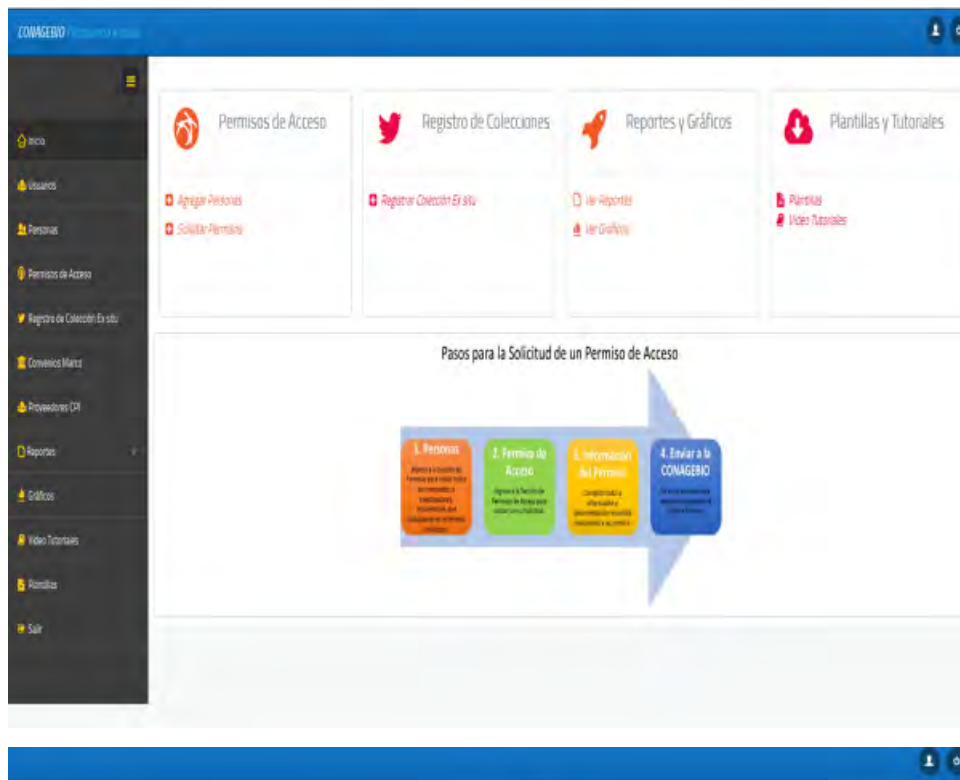

Participatory process for the protection of traditional knowledge associated to biodiversity

- Proposal based on the scope of the consultation process, as well as the methodological proposal.
- A document that conceptualizes the right of indigenous peoples, consistent with the indigenous worldview.

The image shows the login page for the CONAGEBio Virtual Platform. At the top, there is the CONAGEBio logo. Below the logo, there is a blue button labeled 'Ingresar a la Plataforma Virtual'. Underneath this button, there are two input fields: 'Correo electrónico:' and 'Contraseña:'. Below these fields are two buttons: a green 'Ingresar' button and a blue 'Registrarse' button. At the bottom of the page, there are two links: '¿Olvidó su Contraseña?' and 'Ver video Tutorial de Registro'.

Executive Decree N^o 39341-MINAE for the application of administrative sanctions

Published in ALCANCE 43 of La Gaceta No. 53 of March 16, 2016.

In force: 6 months after the publication date.

4 workshops for capacity building

Its purpose is to establish a clear procedure to apply administrative sanctions in the case of unauthorized access to genetic and biochemical resources of biodiversity.

Pioneer:

- a) International experiences are scarce.
- b) and includes the conciliation mechanism.

Philippines

THE PHILIPPINE LEGISLATIVE MEASURES ON ACCESS BENEFIT SHARING (ABS)

*THERESA M. TENAZAS
BIODIVERSITY MANAGEMENT
BUREAU – DENR*

BACKGROUND OF ABS IN THE PHILIPPINES

The Convention on Biological Diversity (CBD), to which the Philippines is a Party, is the first global agreement which focuses on the conservation of biological diversity, the sustainable use of its components, and the fair equitable sharing of benefits arising from the use of genetic resources.

Signed	-	June 12, 1992
Ratified	-	October 8, 1993
Membership	-	January 6, 1994.

The Nagoya Protocol is a supplementary agreement to the Convention on Biological Diversity (CBD). It provides a transparent legal framework for the effective implementation of one of the three objectives of the CBD: the fair and equitable sharing of benefits arising out of the utilization of genetic resources.

Signed - May 24, 2000

Ratified - January 3, 2001

Membership – December 28, 2015

The Philippines is one of 18 mega-biodiverse countries of the world. It hosts around 52, 127 described species and half of which cannot be found elsewhere in the world.

*considered biodiversity “hotspot”

*The accession and ratification to CBD and NP had been pushed by the Department of Environment and Natural Resources to address the issue of biopiracy.

WHAT IS THE LEGAL FRAMEWORK OF ABS IN THE PHILIPPINES? Executive Order No. 247 (1995)

The Philippines was one of the first countries to come up with a policy on access to biological and genetic resources through Executive Order 247.

E.O. 247 aims to ensure that in the prospecting of biological and genetic resources, these resources are protected and conserved, developed and put to sustainable use for the benefit of the Filipino community.

Executive Order No. 247

Bioprospecting or prospecting defined as:

“the research, collection and utilization of biological and genetic resources, for the purpose of applying the knowledge therefrom for scientific and /or commercial purposes”

- **Republic Act No. 9147 of 2001** otherwise known as the “Wildlife Resources Conservation and Protection Act”.
- The Act provides for the conservation, preservation and protection of wildlife species and their habitats, in order to preserve and encourage ecological balance and biological diversity; it provides, furthermore, for the control and supervision of wildlife capture, hunting and trade; finally it provides for supporting and promote scientific research on the protection of biodiversity.

■ The Philippine Clearing House Mechanism (CHM)

The Philippine Clearing House Mechanism (CHM) is established to facilitate the sharing of data and information on the conservation and sustainable use of biological diversity between and among the various stakeholders in the country. This is part of the Philippine commitment to the Convention on Biological Diversity which created the Clearing House Mechanism pursuant to Article 18.3 of the Convention

Guidelines for Bioprospecting Activities in the Philippines (Joint DA-DENR-PCSD-NCIP ADMINISTRATIVE ORDER. No. 01

Approved on January 12, 2005

*DA- DEPARTMENT OF AGRICULTURE

*DENR- DEPARTMENT OF ENVIRONMENT AND
NATURAL RESOURCES

*PCSD- PHILIPPINE COUNCIL FOR
SUSTAINABLE DEVELOPMENT

*NCIP- NATIONAL COMMISSION ON
INDEGINEOUS PEOPLES

MAP OF THE PHILIPPINES

Salient features

- Sets a uniform procedure for evaluating and granting access to biological resources
- Being a joint DENR-DA-PCSD-NCIP issuance, it shall set a uniform procedure for evaluating and granting access to biological resources and avoid the potential problem of inconsistency of bioprospecting regulations for various components of biodiversity under management jurisdiction of different government agencies (DENR, DA and PCSD).
- The National Commission on Indigenous Peoples (NCIP) was added as co-signatory to the joint Administrative Order to ensure that the bioprospecting regulations shall apply to ancestral domains covered by Indigenous Peoples Rights Act (IPRA) .

Salient features

- **Streamlined coverage**

- The guidelines shall apply to research on biological resources for commercial purposes only.
- Redefined “The research, collection, and utilization biological and for purposes of applying the knowledge therefrom solely for commercial purposes”

- **Streamlined procedures for granting access to genetic and biological resources for bioprospecting purposes by**

- Reducing the bureaucratic process in the review and approval of applications;
- Reducing the number of days to review (from 30 days to 15 days); and,
- Provided a definite time line (within 30 days) to approved Bioprospecting Undertaking (BU);

What is “Bioprospecting Undertaking” or BU

- It refers to the “undertaking” or permit which allows a resource user access to biological resources for bioprospecting purposes
- Contains all the mandatory obligations of the bioprospector to the Philippine government and concerned communities as providers of resource used in the bioprospecting venture.

RESOURCE USER- refers to the local or foreign individual, company, organization, institution or entity, either public or private, that will utilize biological resources in a given area in the Philippines for bioprospecting purposes.

SCOPE OF BIOPROSPECTING

- biological resource found in the Philippines including wildlife, microorganisms, domesticated or propagated species, and exotic species
- All ex-situ collections of biological resources sourced from Philippines except for collections currently accessed under international agreements where Philippines is a party
- All areas including protected areas, private lands, ancestral domain and ancestral lands consistent with Indigenous Peoples Rights Act (IPRA)
- of species listed under the Appendices on International Trade in Endangered Species (CITES) and World Conservation Union Red List, whenever by law

Exempt activities

The Guidelines shall not apply to the following uses of biological resources:

- Traditional use;
- Subsistence consumption;
- Conventional commercial consumption for direct use such as logging or fishing;
- Scientific researches on wildlife under Section 15 of the Wildlife Act;
- Scientific researches on agrobiodiversity; and
- Existing procedures of collection and transport of wildlife species exclusively for commercial or conservation breeding or propagation under Sections 17 and 24 of the Wildlife Act.

Exempt activities

- The development of medicinal plants for traditional or alternative medical use shall be primarily governed by the Traditional and Alternative Medicine Act
- Ex –situ collections currently accessed under international agreements where Philippines is a party

Exempt activities

- Scientific studies, conducted by researchers with no commercial interests and purely for academic purposes, using biological resources for taxonomy or solely for the characterization of biological, chemical or physical properties of the biological resources.

EXEMPT ACTIVITIES

- Provided that all permits, licenses or agreements issued for exempt activities shall include a requirement of an undertaking stating that the collector will comply with the **BIOPROSPECTING GUIDELINES** should the biological resources collected be subsequently used in bioprospecting.

INSTITUTIONAL ARRANGEMENTS

Who are the implementing agencies of the joint Bioprospecting Guidelines?

The lead agencies implementing the joint Bioprospecting Guidelines are:

- DENR, through the Biodiversity Management Bureau (BMB), for terrestrial biological resources;
- DA, through the Bureau of Fisheries and Aquatic Resources (BFAR), for aquatic resources;
- PCSO, for biological resources in the Province of Palawan; and,
- NCIP, for matters concerning indigenous peoples (IPs).

Who are the signatories of the Bioprospecting Agreement?

In Accordance with Section 14 of the Wildlife Act, bioprospecting shall be allowed only upon execution of an Bioprospecting Undertaking (BU), **between the resource user and the Secretary of the DA and/or DENR.**

When the bioprospecting activity is to be conducted in the Province of Palawan, the Chairperson of the PCSD, as authorized by the Council, shall be a co-signatory to the BU;

PCSD and /orDENR

PCSD, DENR DA

PCSD and/or DA

and the resource user

Bioprospecting fee

- For foreign bioprospectors: minimum of \$3,000.00 but not more than three times the minimum base on certain criteria.
- For Filipino bioprospectors with no foreign collaborators: 10% of the assessed bioprospecting fee
- For students with no foreign collaborators: 3% of the assessed bioprospecting fee

definitions

- **No foreign collaborator or investor** - ...shall mean that the Filipino resource user does not derive assistance or participation of any kind from a foreign collaborator, partner, donor or investor involved directly or indirectly in bioprospecting.

definitions

- **No commercial interest** - ... shall mean that the researcher or collector has no track record of involvement in commercial product development or application for intellectual property rights over inventions using or derived from biological resources. Furthermore, the researcher or collector must not have any local or foreign collaborator, partner, donor or investor involved directly or indirectly in bioprospecting.

Benefit Sharing

- 1) **Payment of Annual Royalties (2% of global sales) in case a product is commercialize to be shared equitably by:**
 - The Government (thru PCSD, DA, or DENR) to accrue to the Wildlife Management Fund and concerned communities/private land owner where biological material was sourced
- 2) **Annual user's fee for resource provider, communities/private land owner:**
 - For foreign bioprospectors: \$1,000/collection site/ annually
 - For local bioprospectors with no foreign collaborators: 10% of \$1000 (or \$100)/ annually

3. UP FRONT PAYMENT- is that amount paid annually by the resource user to the resource provider for the duration of the collection.

USD 1,000 per collection site and paid annually/base on type of resource user

3) **Non-monetary benefits for resource providers**

- Equipment for biodiversity inventory and monitoring
- Supplies and equipment for the resource conservation activities
- Technology transfer
- Formal training including educational facilities
- Infrastructure directly related to the management of the area
- Health care
- Other capacity building and support for in-situ conservation and development activities

Is there a difference between commercial and non commercial use ?

- The Joint DENR-DA-PCSD-NCIP ADMINISTRATIVE ORDER NO. 1 defined bioprospecting as research, collection and utilization of biological and genetic resources for purposes of applying the knowledge derived therefrom solely **for commercial purposes only**.

DURATION OF COLLECTION

- **Collection of samples under the BU shall not exceed three (3) years from the date of execution**
- **Renewable for succeeding periods but not more than three (30 years)**
- **All other terms of the BU shall remain in force until such time when all obligations have been performed.**

What are the general guidelines in negotiating for benefit sharing?

1. The resource user shall negotiate with the resource provider through representatives that the resource provider may designate.

* decisions of the representative shall be binding on the resource providers unless a formal process of ratification is reserved.

2. When there is more than one (1) provider-group in the area, each provider-group shall designate one (1) representative to the negotiations.

3. Representatives of each provider-group may negotiate collectively or separately with the resource user.

4. However, only one (1) BU shall be executed

What are the general guidelines in negotiating for benefit sharing?

The resource user and providers shall come to an agreement regarding payments of monetary and non-monetary benefits. The negotiated benefits shall be given by the resource user, in the amounts and periods agreed upon, to the government and resource providers, where applicable:

What are the general guidelines in negotiating for benefit sharing?

Any other commitments made and agreed upon by the resource user and any of the provider-group as conditions for the granting of the PIC shall be separate and independent from the benefits and fees prescribed in the joint Bioprospecting Guidelines.

All payments made by the resource user to any provider-group are non-reimbursable even if no profit is eventually realized from the bioprospecting activity.

WHAT ARE THE STEP BY STEP PROCEDURE AND TIMELINES OF BIOPROSPECTING?

WHERE TO FILE APPLICATION ?

Depending on the kind of biological resources to be collected and the place of collection, application for a BU may be submitted to any of the implementing agencies:

- BMB for terrestrial resources
- BFAR for aquatic resources
- PCSD and BFAR for aquatic resources in the Province of Palawan, or PCSD and BMB for terrestrial resources in the Province of Palawan, or all three (3) agencies for aquatic and terrestrial resources in the Province of Palawan
- BMB and BFAR for both terrestrial and aquatic resources in all other areas outside the Province of Palawan.

What are the requirements for obtaining a BU?

The following are required prior to the issuance of a BU:

- Letter of intent (LOI)
- Three copies (3) of the research proposal
- Duly accomplished application form
- Company/Institution/Organization/Agency profile
- PIC/FPIC Certificate from resource providers
- Summary of the agreed terms of benefit sharing with resource providers
- Documentary proof of compliance to procurement of PIC/FPIC
- Application/Processing fee of Five Hundred Pesos (Php500.00)
- Others as may be required by the government agency concerned

6) Approval/disapproval of the BU (within one month)

7) Posting of Performance/Rehabilitation bond in the form of surety bond (25% of project cost)

8) The Bioprospector may proceed on with the collection activity.

* Payment of Bioprospecting fee shall be in accordance with the agreed schedule as contained in the BU.

What is the procedure for processing applications for a BU?

Step 1. Submission of application and initial requirements

- Letter of Intent (LOI)
- Duly accomplished application form
- Research proposal
- Company/Institution/Organization/Agency profile
- Application/Processing fee (Php 500.00 only)

What is the procedure for processing applications for a BU?

Step 2. Initial evaluation

BMB, BFAR and/or PCSD accepts the application, checks the completeness of the initial requirements, and determines whether the application is covered by the joint Bioprospecting Guidelines. They may consult with their respective or joint Technical Committees in the initial evaluation.

What is the procedure for processing applications for a BU?

Step 3. Submission of additional requirements

Upon verification that the application is within the coverage of the joint Bioprospecting Guidelines, BMB, BFAR and/or PCSD shall require the applicant to submit the following additional requirements:

- PIC/FPIC Certificate from resource providers following the procedure for obtaining the PIC/FPIC
- Documentary proof of compliance with other relevant requirements under Annex 1 of the joint Bioprospecting Guidelines
- Summary of agreed terms of benefit sharing
- Letter of acceptance from local collaborator
- clearance from PCSD, if bioprospecting is to be conducted in the Province of Palawan only
- Others as may be required by the government agency concerned

What is the procedure for processing applications for a BU?

Step 4. Preparation of the BU

Upon verification that all requirements are complete, the concerned agency prepares a draft BU incorporating the terms agreed upon by the resource user and provider.

In case the bioprospecting activity involves species under multiple jurisdictions, the concerned implementing agencies consolidate all submitted documents, endorse the application to the joint Technical Committee, and jointly prepare the draft BU.

What is the procedure for processing applications for a BU?

Step 5. Final evaluation by the Technical Committee

Within fifteen (15) days after receipt of the complete requirements, the respective or joint Technical Committees make a final evaluation of the application as contained in the draft BU.

The draft BU is forwarded to the appropriate signatories (DENR Secretary, DA Secretary and/or Chairperson of the PCSD) with recommendation for approval or rejection.

What is the procedure for processing applications for a BU?

Step 6. Decision of appropriate agencies

Within one (1) month from the submission of the recommendation of the Technical Committee, the appropriate agencies render a decision regarding the approval or rejection of the BU.

What is the procedure for processing applications for a BU?

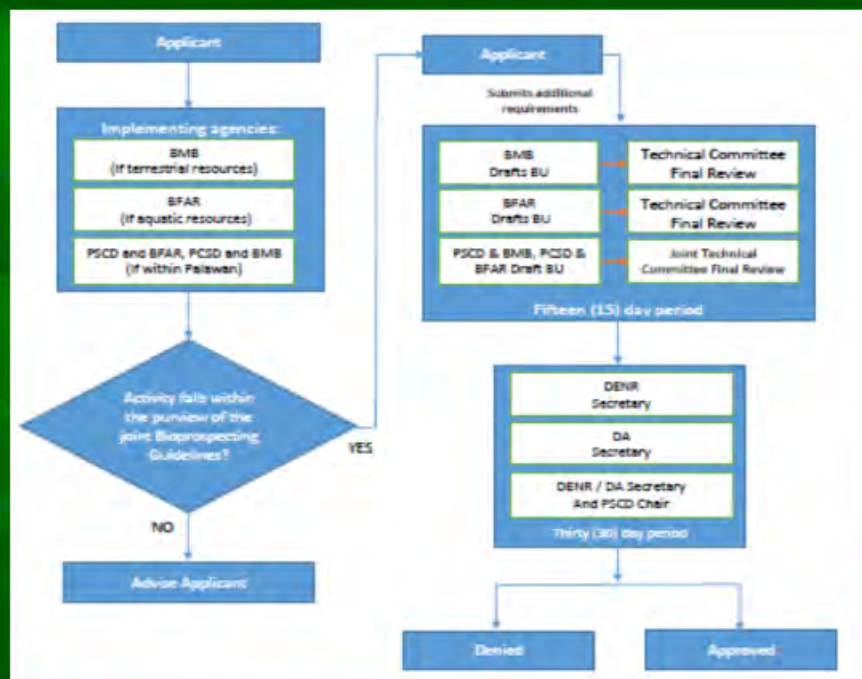

Step 7. Posting of rehabilitation/ performance bond

Within thirty (30) working days after the signing of the BU, the resource user posts a rehabilitation/performance bond in the form of a surety bond, in an amount equivalent to twenty-five percent (25%) of the project cost as reflected in the research budget.

What is the procedure for processing applications for a BU?

Step 8. Collection of samples

The resource user may collect samples only after posting the bond. Collection of samples is undertaken in accordance with the collection quota indicated in the BU. Failure to post the bond is a basis for rescission of the BU.

OVERALL POLICY OBJECTIVES

1) To redress the injustice of the past in order to achieve socio-economic development goals ~ **fair & equitable benefits sharing.**

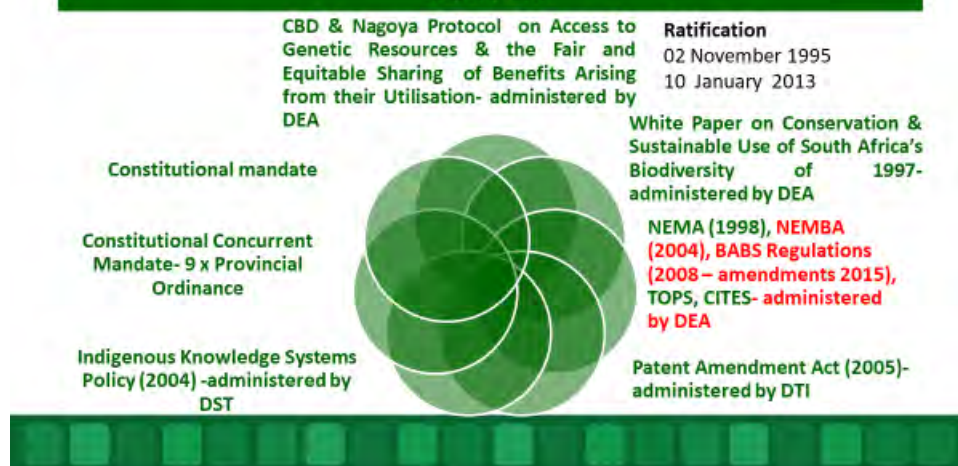

2) To provide regulatory framework for bioprospecting / biotrade activities ~ attain conservation & sustainable utilization of IBRs ~ **Permitting System.**

3) To provide obligatory requirements to the regulated sectors to recognize existing TK on the useful properties of IBRs ~ **Benefit Sharing Agreements.**

4) To provide obligatory requirements to the regulated sectors to seek permission from the land owners to access/collect IBRs ~ **Material Transfer Agreements & Benefit Sharing Agreements.**

5) To implement international regulatory obligations adopted by South Africa ~ **CBD & Nagoya Protocol on ABS**

REQUIREMENTS FOR ACCESS TO IBRs/ ASSOCIATED TK

Access Requirements for Commercial Purposes	Discovery Phase of Bioprospecting	Commercialisation Phase of Bioprospecting	Biotrade related to Bioprospecting
1. Identify Access Provider & ensure full disclosure of Project Information to obtain Prior Informed Consent of the Access Provider	Yes (Sec. 82 & Reg. 13 & 14)	Yes (Sec. 82 & Reg.17)	Yes (Sec. 82 & Reg.16)
2. Mutually Agreed Terms	Yes - Only if the discovery activity is undertaken outside SA (Sec. 83,84 & Reg.14)	Yes (Sec.83,84 &Reg.17)	Yes (Sec. 83,84 & Reg.16)
3. Collaboration with national institution or natural person	Yes - Only for Foreign applicants (Reg.12)	Yes - Only for Foreign applicants (Reg.12)	Yes - Only for Foreign applicants (Reg.12)
4. Permit Issued with conditions by the Minister	Yes - Only if the discovery activity is undertaken outside SA	Yes	Yes
5. Notification to the Minister	Yes -Only if the discovery activity is undertaken in SA	No	No

REQUIREMENTS FOR ACCESS TO IBRs	
Access Requirements for Non-Commercial Purposes	Export Permit for Research other than Bioprospecting
1. Identify Access Provider & ensure full disclosure of Project Information to obtain Prior Informed Consent of the Access Provider	Yes – (Sec. 82 & Reg. 19)
2. Mutually Agreed Terms	No
3. Collaboration with national institution or natural person	Yes - Only for Foreign applicants (Reg.12)
4. Permit Issued with Conditions by the delegated Provincial Authority	Yes - Only if the research is undertaken outside SA
5. Compulsory Permit Condition	<ul style="list-style-type: none"> • The IBR may only be used for non-commercial research purposes • The IBR may not be used for Bioprospecting • The IBR may not be sold, donated or transferred to a third party

TIMEFRAMES

- The Issuing Authority:
 - must consider & decide on any permit application or notification within **120 working days** after the receipt of such an application, if satisfied that all the prescribed & requested information has been submitted.
 - must within **10 working days** after the date of receipt of such an application & in writing, request the applicant to submit such information with 20 working days after date of receipt of such a request.
- If the additional information requested is not submitted to the issuing authority within **30 working days** after such a request, such an application must be deemed withdrawn.

STEP-BY-STEP PROCEDURES

- Source documents www.environment.gov.za.
- Select & complete relevant Annexes to your project.
- Attach the signed permit application form, BSA(s) & MTA (s).
- Attach project summary/ background
- Pay the non-refundable permit application fee as prescribed in Annexure 4.
- Submit permit application documentation to DEA.
- Contact DEA officials for assistance, where necessary.

STEP-BY-STEP PROCEDURES

South Africa's Bioprospecting, Access and Benefit-Sharing Regulatory Framework

Guidelines for Providers,
Users and Regulators

PRE-APPLICATION INFORMATION CHECKLIST

1. What kind of biological resource am I planning to use?
2. Is it indigenous?
3. Where will I collect it, is it wild harvested or cultivated and where is it going?
4. Is there traditional knowledge associated with the biological resource?
5. What is being or has been done on it and what I am planning to do with it?

WHAT KIND OF BIOLOGICAL RESOURCE?

- Plant
- Animal
- Microorganism
- Derivative = part, tissue, extract, chemical compound
- Genetic material = contains functional units of heredity

IS IT INDIGENOUS?

Indigenous species

- Indigenous ≠ endemic
- Occurs or historically occurred in nature in RSA
- Excludes human genetic resources activity

Exotic / alien species

- Not subject to national legislation
- Must provide evidence of origin of material

WHERE WILL I COLLECT FROM?

Material transfer agreement required

- Supplier
- Community
- Land owner

No material transfer agreement required

- Own land or cultivation

WHAT AM I PLANNING TO DO WITH IT

- South African based activities
- International based activities
- Both National & International

IS THERE ASSOCIATED TRADITIONAL KNOWLEDGE?

Search for Hoodia Gordonii Bushman weight loss Capsules 90 x 400mg

R169,00

THE BEST NATURAL HUNGER SUPPRESSANT
Hoodia gordonii is the newest most popular weight loss diet aid of the year.

Fantastic results obtained! Get slimmer now - with the same herb that was used by the Bushman and San people of the Kalahari. Hoodia.

Join the 100's who have lost weight quickly and permanently with Hoodia Gordonii.

100% PURE, DIRECTLY FROM THE WESTERN CAPE FARMS IN SOUTH AFRICA!
CLICK HERE TO SEE OUR CERTIFICATE OF ANALYSIS

You are getting 100% Pure Hoodia Gordonii, nothing else added. You are not buying cheap quality - you are getting from the source! We guarantee top quality. We supply major pharmaceutical companies with this same Hoodia powder.

WHY SHOULD I USE HOODIA GORDONII?
Hoodia Gordonii is the new exciting hunger suppressant to give you control of your eating and effectively manage your weight loss program. In 1937, a Dutch anthropologist studying the San indigenous people in the Kalahari desert near what is now the South Africa-Namibia border noted that they sucked on the Hoodia plant as a hunger suppressant and thirst quencher. These bushmen did not eat on their two to three day hunts, instead, they munched on the stem of this succulent to suppress their hunger and thirst. The San people -known for their survival skills, rock art, trance-dancing and mystic symbiosis with their semi-desert or savannah environment—can trace their heritage back some 27,000 years on the basis of rock paintings drawn by their ancestors.

IDENTIFICATION OF TK HOLDERS

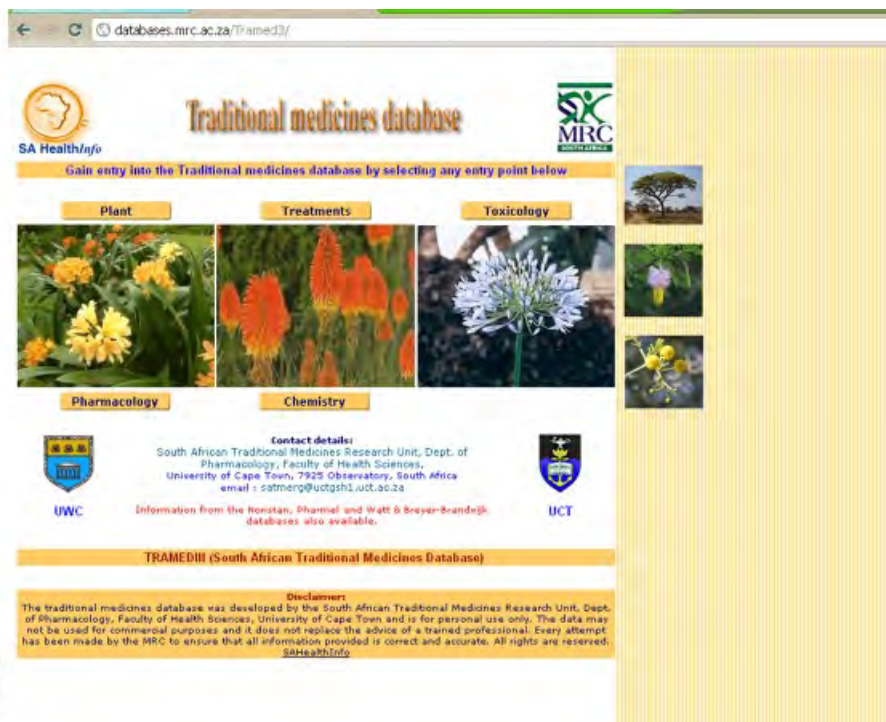

Medium to Long term methods:

- National Recordal System by the Department of Science and Technology

Interim methods:

- The following information points:
 - Medical Research Council website
 - SANBI website
- Desktop Research (Publications, Journals)
- Support from Government (DEA) for the identification of the TK holder.

How do I notify about Discovery phase Bioprospecting

Discovery phase bioprospecting:

- ❖ Source documents www.environment.gov.za
- ❖ Complete Annexure 1
- ❖ Include non-disclosure agreement, where applicable
- ❖ Must also sign a commitment to comply with the requirements at the commercialisation phase of bioprospecting
- ❖ Contact DEA officials for assistance

HOW DO I APPLY FOR A PERMIT?

- ❖ Source documents www.environment.gov.za
- ❖ Use Annexure 2, 3 or 5
- ❖ Attach the signed BSA(s) and MTA (s), where applicable
- ❖ Pay the non-refundable permit application fee
 - Non-commercial research: R200.00
 - Export Discovery Phase: R100.00
 - Bioprospecting: R 7500. 00
 - Biotrade: R7000.00
 - Integrated Biotrade & Bioprospecting: R8000.00

- ❖ Contact DEA officials for assistance

ROLE OF THE PERMIT ISSUING AUTHORITY

- Facilitate the negotiation process of the MTA & BSA upon request.
- Review the entire permit application documentation with technical support from the Bioprospecting Advisory Committee , focusing on:
 - Species involved, Quantity & Sustainability
 - Steps taken to identify the relevant stakeholders;
 - Evidence for the full disclosure of information to the identified stakeholders (e.g letters, minutes or report of meetings etc);
 - Proof of PIC granted (e.g community resolution with full description of the community & contact details of their representative plus concluded MTA & BSA)
 - Proposed apportioning of benefits taking into consideration, the IPR, investments already made by users or providers, availability of similar products in the market, level of exclusivity of the agreement etc.)
- If not satisfied with the agreements, before making a final decision –
 - Consult any person competent to provide technical advice on the agreement.
 - Conduct Public Participation on the non-confidential information of the concluded agreement.

environmental affairs
Department:
Environmental Affairs
REPUBLIC OF SOUTH AFRICA

OBLIGATIONS OF PERMIT HOLDER

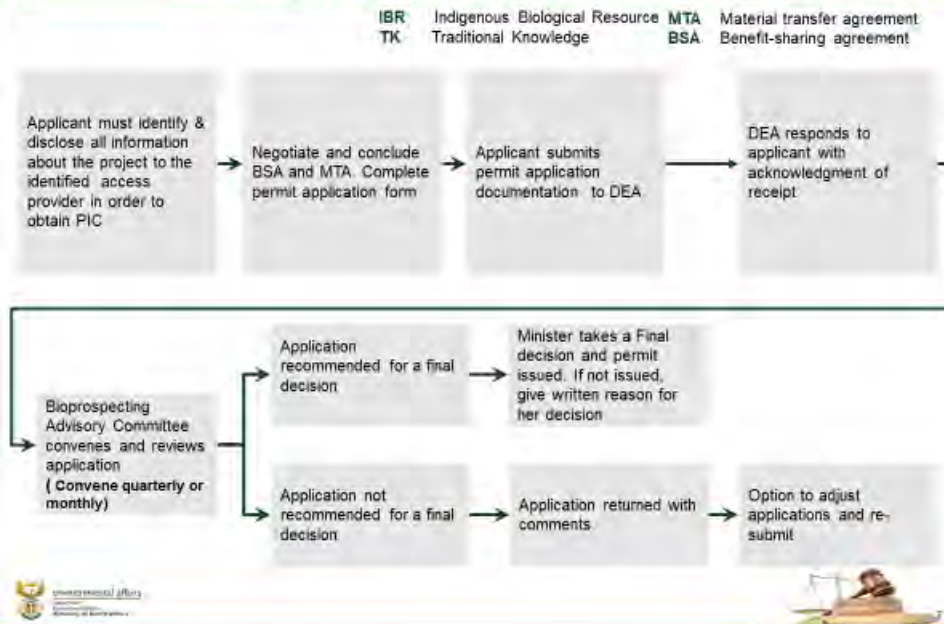

- Submitting biannual/ annual project status report;
- Applying for renewal/ amendment of permit;
- Is liable for the costs of mitigating or remedying the impact of the bioprospecting/ biotrade on the environment,
- Avoid selling, donating or transferring the IBR to a third party without a written consent of the Minister;
- Sharing non-monetary benefits due to Access Providers in terms of a BSA; and
- Payment of money due to Access Providers in terms of a BSA into the Bioprospecting Trust Fund, as required by section 85 (1) of NEMBA.

environmental affairs
Department:
Environmental Affairs
REPUBLIC OF SOUTH AFRICA

36

The permit application process begins long before the application is submitted to the Department of Environmental Affairs

CURRENT STATUS OF PERMIT ISSUED

- To date 52 permits issued
 - 22 are bioprospecting permits;
 - 17 are biotrade permits;
 - 13 are integrated biotrade & bioprospecting permits.
- Majority of these permits are for Cosmetic industry.

environmental affairs
Department:
Environmental Affairs
REPUBLIC OF SOUTH AFRICA

Monetary & Non-Monetary Benefits

- To date 79 Benefit Sharing Agreements have been Approved
- Permit applicants are open to a variety of benefit sharing options which range from **Short-Medium- Long Term Benefits**

Short Term	Medium Term	Long Term
Up-Front Payments	Access fees	License fees in case of commercialisation
Information	Milestone payments	Payment of Royalties
Species inventories	Environmental Education	Joint ventures
Access to collections	Training	Supply contracts
Acknowledgement of parties	Collaboration	Co-authorship of publications
	Strengthen capacity for technology transfer	Contribution to local economy
		Recognition and promotion of TK
		Livelihood benefits

For permitted companies the bulk of entities use a combination of monetary and non-monetary benefits

Key take aways

1. Specific kinds of benefits are decided upon on a case by case basis by Parties
2. Monetary benefits ranges from 1-10%

Case example: Biotrader in *Aloe ferox*

Clients in Europe

- 10 harvesting communities in 2 provinces
- Primary processing plant (crystals powder or Lump) in SA

Key Challenge & Proposed Solution

- Limited or no benefit sharing from European based Industries with Communities
- EU member states to support SA by encouraging users of natural ingredients traded for bioprospecting to apply for permits

NEXT STEPS

- Alignment of South African Legislation (NEMBA & BABS Regulations) with the Nagoya Protocol on ABS through amendments is underway.
- Improve efficiencies in the BABS Permitting Process through Electronic Permitting System.
- Improve provisions for benefit sharing obligations.
- Willing to continue to work with CNAs of EU member States and also from other Regions in facilitating compliance with South African Legislations by their industries.

ACCESS SCENARIO FOR SOUTH AFRICA	
PARAMETERS OF THE CASE	HOW NATIONAL SYSTEM WILL ADDRESS IT
1. Type of IBR & Source- Sponges from unspoilt marine environment	1. Covered in the definition of IBRs which includes plants, animals and microorganism sourced from the terrestrial, aquatic or marine environment.
2. Access Provider- Marine Protected Areas	2. Government- PIC may be recommended on alternative marine source due to other restrictions provided in the Marine legislation. If PIC granted, MAT must be concluded.
3. IPLCs Involved- None	3. No MAT requirements
4. Associated TK- None	4. No MAT requirements
5. Purpose of the Research <ul style="list-style-type: none"> • Testing of extracts of the sponges on cancer cells in the University Lab • If successful, further tests on mice will be undertaken by his company 	5. Discovery Phase of Bioprospecting
6. Applicant- Researcher & CEO of start-up Company attached to a University	6. The Researcher must identify a SA partner to submit a joint application for Discovery Phase of Bioprospecting Export Permit. The University must be included as a Collaborator in the application form

Australia

Context and history

- Australian biodiversity
- Australian constitution and [governments](#)

1993 Ratified the CBD

1999 Environment Protection and Biodiversity Act

2005 Access regulations

2012 Signed Nagoya

....

Ratification

- Australia must have all measures in place to implement obligations before ratification
- We need legislation to implement the Nagoya Protocol – particularly on the user side
- And we need persuasive reasons to justify legislation

Part 8A Access to biological resources in Commonwealth areas

Division 8A.1 Preliminary

8A.01 Purpose of Part 8A

For section 301 of the Act, the purpose of this Part is to provide for the control of access to biological resources in Commonwealth areas to which this Part applies by:

- (a) promoting the conservation of biological resources in those Commonwealth areas, including the ecologically sustainable use of those biological resources; and
- (b) ensuring the equitable sharing of the benefits arising from the use of biological resources in those Commonwealth areas; and
- (c) recognising the special knowledge held by indigenous persons about biological resources; and
- (d) establishing an access regime designed to provide certainty, and minimise administrative cost, for people seeking access to biological resources; and
- (e) seeking to ensure that the social, economic and environmental benefits arising from the use of biological resources in those Commonwealth areas accrue to Australia; and
- (f) contributing to a nationally consistent approach to access to Australia's biological resources.

Contemporary aspirations

Encourage research for knowledge,
understanding, and innovation

A strong focus on the relationship

Focus on legal certainty

Further reduce transaction costs

Extreme flexibility

Access Permits...

- are required where biological samples are being taken from a Commonwealth area
- are issued only with the approval of the access provider by the competent national authority
- require benefit-sharing
- provide evidence of legal collection and CBD/Nagoya
- are [published](#)

Sharing benefits: non-commercial

Benefits include:

offer of taxonomic duplicates, research reports including species, distribution, biochemical analysis

Other conditions:

can't give the sample to a third party without permission

can't use the sample for commercial purposes without negotiating a comprehensive benefit-sharing agreement

Mechanism:

statutory declaration

Commonwealth of Australia
STATUTORY DECLARATION
Statutory Declarations Act 1959

1. Insert the name, address and occupation of person making the declaration

1. [Insert the name, address and occupation of person making the declaration]

make the following declaration under the *Statutory Declarations Act 1959*:

2. Set out matter declared to in numbered paragraphs

2 That in relation to the application by [insert proponent institution/company and name/s of principle researchers] for access to biological resources under Part 8A of the *Environmental Protection and Biodiversity Regulations 2000* entitled [insert title of application] for [insert proposed action]:

a) I am authorised to make this declaration for and on behalf of [insert proponent/s institution/company] (referred to as 'the applicant for the permit'); and

b) the applicant for the permit does not intend to use the biological resources, to which the proposed action relates, for commercial purposes; and

c) the applicant for the permit undertakes to give a written report on the results of any research on the biological resources to each access provider; and

d) the applicant for the permit undertakes to offer, on behalf of each access provider, a taxonomic duplicate of each sample taken to an Australian public institution that is a repository of taxonomic specimens of the same order or genus as those collected for permanent loan; and

e) the applicant for the permit undertakes not to give the sample to any person, other than the institution mentioned in paragraph (d) above, without permission of each access provider; and

f) the applicant for the permit undertakes not to carry out, or allow others to carry out, research or development for commercial purposes on any genetic resources or biochemical compounds comprising or contained in the biological resources unless a benefit-sharing agreement has been entered into with each access provider.

I understand that a person who intentionally makes a false statement in a statutory declaration is guilty of an offence under section 11 of the *Statutory Declarations Act 1959*, and I believe that the statements in this declaration are true in every particular.

3. Signature of person making the declaration

3

4. Place

5. Day

6. Month and year

Declared at on of

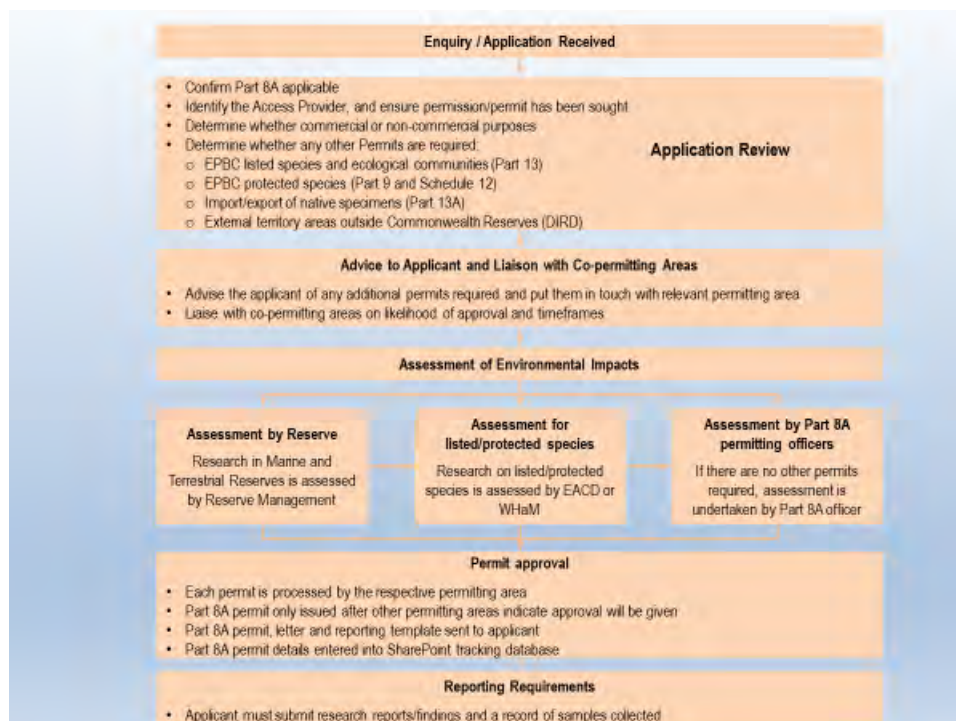

Benefit-sharing: commercial/potentially commercial

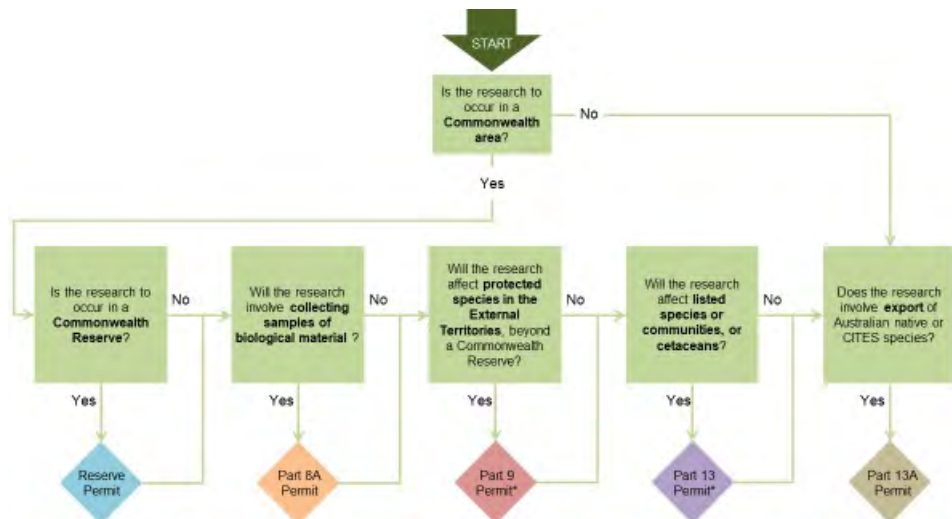

Benefits include:

- monetary benefits—eg royalties (negotiable); and/or
- non-monetary benefits—eg sharing of data, education and training

Mechanism:

- a standard legal agreement
- (provides guidance on monetary benefits expected by the Commonwealth)

Room for improvements

- Consistent application processes (a single application form, integrate with other approvals) and consistent permit conditions (where we can)
- Better reporting compliance and better quality information (reporting templates, data standards)
- Online application and customer relation management
- The research continuum

Mexican perspective on ABS

Basic principles:

- Alignment with the national legal framework
- Co-responsability
- Recognition of environmental and cultural values.
- Considers all genetic resources
- All users are regulated
- The State is guarantor
- Foresees special considerations
- Foresees the change of intention
- Beneficiaries: indigenous peoples, local communities, private holders or the Nation (ABS National Fund).
